† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

#### Inland specific encoding instructions:

- A) For detailed list of all available input ID's for **category of notice mark** (catnmk) see annexes "AA - main European inland waterway marking system", "AB - Russian Inland Waterways", "AC - Brazilian".
- B) Although the list was originally based on the main European inland waterway marking system, the codes can be used for other **Notice Marks** with the same meaning (e.g., on the Paraguay-Parana Waterway in Brazil).
- C) For notice marks as described in Annex AA: The **function of notice mark** (fnctnm) has to be encoded for display purposes as follows: 1 (prohibition mark, signs A), 2 (regulation mark, signs B), 3 (restriction mark, signs C), 4 (recommendation mark, signs D), 5 (information mark, signs E).
- D) For notice marks as described in Annex AA: If the notice mark is positioned rectangular to the bank, it can be seen only by vessels heading upstream (**direction of impact** (dirimp) = 1) or by vessels heading downstream (**direction of impact** (dirimp) = 2).  
  
If the notice mark is positioned parallel to the bank, it can be seen by vessels heading upstream as well as vessels heading downstream. In this case, the direction of impact is defined by triangular additional marks.
- E) For notice marks as described in Annex AA: The **distance of impact, downstream** (disipd) or the **distance of impact, upstream** (disipu) can be defined by the distance between two notice marks, by a number, which is shown on the top board or by a number, which is shown on an triangular additional mark.
- F) For notice marks as described in Annex AA: The minimum distance of impact from the notice mark rectangular to the bank, **distance from notice mark, first** (disbk1) can be defined by:
  - 1. the number on a sign C.5 (distance of the waterway from the bank),
  - 2. the first number on a sign E.5.2 (berthing permitted between two distances).
- G) For notice marks as described in Annex AA: The maximum distance of impact from the notice mark rectangular to the bank, **distance from notice mark, second** (disbk2) can be defined by:
  - 3. the number on a sign A.5.1 (berthing prohibited within the breadth indicated),
  - 4. the number on a sign E.5.1 (berthing permitted within the distance indicated),
  - 5. the second number on a sign E.5.2 (berthing permitted between two distances).
- H) For notice marks as described in Annex AA: Rectangular boards on top of the main sign ('addmrk' = 1) are showing the distance at which the regulation applies or the special feature indicated by the notice mark is to be found.  
  
Rectangular boards at the bottom of the main sign (**additional mark** (addmrk) = 2) are showing explanations or additional information.  
  
Triangular pointers at the side of the main sign (**additional mark** (addmrk) = 3 or 4) are showing the direction of the section to which the notice mark applies.

Triangular pointers at the bottom (**additional mark** (addmrk) = 5) are showing the distance from the shore, within which the regulation applies.

The attribute **additional mark** (addmrk) is only defining the position and shape of the additional mark. The content is given by other attributes (**distance of impact, downstream** (disipd), **distance of impact, upstream** (disipu), **distance from notice mark, first** (disbk1), **distance from notice mark, second** (disbk2), **information** (INFORM))

- I) For notice marks as described in Annex AA: If the system of navigational marks of a special sign is different from the system mentioned in the metadata feature **Navigational System of Marks** (m\_nsys), or there is no such metadata feature in the cell, the attribute **marks navigational – system of (MARSYS)** must be used.
- J) For notice marks as described in Annex AA: If a notice mark is illuminated, this should be indicated by the attribute **status** (STATUS) = 12).
- K) For notice marks as described in Annex AA: Explanations or additional information shown on additional marks and
  1. the number shown on the signs B.6 (maximum speed limit) amended by the unit (e.g., “10 km/h”),
  2. the frequency band and the number shown on the sign B.11 (mandatory radiophone channel) and E.23 (nautical radio information channel) (e.g., “VHF 11”),
  3. the number shown on the signs C.1 (restricted fairway depth), C.2 (restricted vertical clearance), C.3 (restricted width of the fairway or passage), and E.5.3 (maximum number of vessels berthing abreast)
 have to be indicated in the **information** (INFORM) attribute.  
 If the sign E.5.3 is used as an additional mark, the text “maximum x vessels berthing abreast” should be used. The maximum number of vessels berthing abreast has to be indicated in arabic numbers.
- L) For notice marks as described in Annex AA: The standard **scale minimum** (SCAMIN) value for notice marks is 22000. Different values can be used to improve the display with regard to the safety of navigation.
- M) For notice marks as described in Annex AA: For more detailed information regarding Notice Marks and which marks should be accompanied by area features, see Annex AA, Notice Marks for more detailed information.
- N) For notice marks as described in Annex AA: To encode an area, where notice marks apply, features such as **Restricted Area** (resare), **Turning Basin** (trnbsn) or **Caution Area** (CTNARE), **Communication Area** (comare) must be associated using a **Notice Mark Aggregation**. For **Anchorage Area**, **Anchor Berth** and **Berth** the **Notice Marks** must be associated to an **Anchorage Or Berth Aggregation**.
- O) For notice marks as described in Annex AA: Signs with textual description, which have the same meaning as a sign (for example a white board with the text “mooring prohibited”) can be encoded as notice marks with **information** (INFORM) = “textual description only”.
- P) For notice marks as described in Annex AA: Signs, which are installed by private companies, should be encoded with **status** (STATUS) = 8 (private).
- Q) For notice marks as described in Annex AA: If the chart producer wants to ensure that a **Notice Mark** is displayed correctly, if detailed symbolization is used instead of the generalized symbols, **orientation value** (ORIENT) has to be encoded.
- R) For notice marks as described in Annex AA on bridges: The attribute **orientation value** (ORIENT) must be used to rotate the symbol according the orientation of the bridge. **Orientation value** at bridges should correspond to the prescribed heading of the vessels.

- S) For notice marks as described in Annex AA on bridges: If a **Notice Mark** is illuminated, this should be indicated by the attribute **status** (STATUS) = 12, e.g. at bridges). If the signs A.1, D.1 and D.2 are not illuminated, but the corresponding lights are shown by night, the attribute **status** (STATUS) = 12 can be used, too. If it is important for the safety of navigation to indicate the existence of the lights on the chart (e.g. to prevent confusion with other lights), **Light all around** (LIGHTS) can be used instead of the attribute (see 19.2).
- T) For notice marks as described in Annex AA on bridges: The **scale minimum** (SCAMIN) value 8000 should be used. Different values may be used to improve the display with regard to the safety of navigation.
- U) For notice marks as described in Annex AA on bridges: This feature must be aggregated to a bridge by a **Bridge Aggregation**.
- V) BR: The **function of notice mark** (fnctnm) has to be encoded.
- W) BR: The attribute **bank of the waterway** (bnkwtw) must be encoded for display purposes when adopting **marks navigational – system of** (MARSYS) = 13 (Brazilian national inland waterway regulation) or 15 (Paraguay-Parana waterway - Brazilian complementary aids). It indicates the board colours.
- X) BR: The attribute **orientation value** (ORIENT) must be used to rotate the symbol according the orientation of the board for all Brazilian notice marks.
- Y) BR: The **direction of impact** attribute (dirimp) must be used to define if the notice mark is addressed to vessels heading upstream or downstream.

|                         | ◀ Triangle left side    | Triangle right side ▶   |

## 21 Geo Features – Radar, Radio

### 21.1 Automatic Identification System (AIS) aids to navigation

AIS signals used as an aid to navigation may:

- actually be transmitted from a physical aid to navigation, or appear to be transmitted from a physical aid to navigation but is actually transmitted from an AIS base station (Physical AIS aid to navigation); or
- be transmitted from an AIS base station to represent an aid to navigation where a physical aid to navigation does not exist (Virtual AIS aid to navigation).

It is not required to encode AIS information on IENCs, as IENCs are intended to be used in conjunction with Inland ECDIS or ECS, in which AIS targets are displayed when in range. However, producers may wish to indicate the presence of a physical AIS aid to navigation to aid in the route planning process or for use in ECS or other navigation systems.

## 21.2 Physical AIS aid to navigation

**IHO Definition: PHYSICAL AIS AID TO NAVIGATION.** An Automatic Identification System (AIS) message 21 transmitted from a physical Aid to Navigation, or transmitted from an AIS station for an Aid to Navigation which physically exists. (Adapted from IALA Recommendation A-126).

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 21.2.1 Physical Automatic Identification System (AIS) aids to navigation

If it is required to encode a physical AIS aid to navigation, it must be done using the feature **Physical AIS Aid to Navigation**.

#### Remarks:

- Physical AIS aids to navigation must be encoded, where required, using the geometry of the physical aid to navigation from which the AIS signal is, or appears to be, transmitted. If it is required to encode the actual location from which the signal is transmitted for a physical AIS aid to navigation where the signal is transmitted from another location, it must be done using a **Radio Station** feature (see clause 21.3), with attribute **category of radio station** = 16 (AIS base station).
- The unique Maritime Mobile Service Identity (MMSI) code for the physical AIS aid to navigation should be encoded, where known, using the attribute **MMSI code**.
- Where populated, the attribute **estimated range of transmission** for **Physical AIS Aid to Navigation** provides the boatmaster with an approximate distance from the position of the aid that the broadcast signal will generate the display of the AIS symbol on the Inland ECDIS or ECS.

Distinction: Radar Station; Radio Station; Radio Calling-In Point.

#### Inland specific Encoding Instructions:

- A) Physical AIS aids to navigation have to be encoded as feature if they are not encoded as an attribute of another aids to navigation feature.

## 21.3 Radio station

**IHO Definition: RADIO STATION.** A place equipped to transmit radio waves. Such a station may be either stationary or mobile, and may also be provided with a radio receiver. (Adapted from IHO Dictionary – S-32).

### **S-401 Geo Feature: Radio Station (RDOSTA) (O)**

#### **Primitives: Point**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 21.3.1 Radio stations

Transmissions from radio stations may provide boatmasters with a line of position. Most radio position fixing systems require Radio Direction Finding (RDF) equipment to determine the bearing of the transmitting device; such equipment is generally no longer fitted on vessels. The exception is “emergency use only” VHF-based direction finding services (which do not use RDF equipment). Consequently, the following radio position-fixing stations are now obsolete and there is no longer any value in encoding them on IENCs:

- Circular (non-directional) (RC), directional (RD) and rotating pattern (RW) marine radiobeacons;
- Consol beacons (Consol);
- Aeronautical radiobeacons (Aero RC);
- Radio direction-finding stations (except VHF-based emergency stations) (RG);
- Coast Radio Stations providing ‘QTG’ service (R).

The feature “radio station” is used to encode the point of transmission of the signal.

If it is required to encode a radio station, it must be done using the feature **Radio Station**.

#### Remarks:

- The **Radio Station** must only be used to encode the technical equipment itself, independent of the building or structure in which it is installed. If it is required to encode the building or structure (for example mast, tower, radar dome), it must be done using an appropriate feature (for example **Building, Landmark**). There is no requirement to establish a Structure/Equipment association between the **Radio Station** feature and the structure in which it is installed.
- Further information (for example transmission characteristic) may be encoded using the complex attribute **information** (see clause 2.4.6).
- Each VHF-channel should be indicated, using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).
- If it is required to encode a DGPS station, it must be done using **Radio Station**, with attribute **category of radio station** = 10 (Differential GNSS).

- Where required, the complex attribute **frequency pair**, sub-attributes **frequency shore station receives** and **frequency shore station transmits**, must be quoted in Hertz, for example a signal frequency of 950 MHz must be encoded as *950000000*.

### 21.3.2 Radio direction-finding stations

If it is required to encode a radio direction-finding station, it must be done using a **Radio Station** feature, with attribute **category of radio station** = 5 (radio direction-finding station). The identification signal may be encoded using the attribute **call sign**.

Remarks:

- Direction-finding is now only provided as an emergency service by VHF.

Distinction: Physical AIS Aid to Navigation; Radar Station; Radio Calling-In Point.

Inland specific Encoding Instructions:

---

## 21.4 Radar transponder beacon

**IHO Definition: RADAR TRANSPONDER BEACON.** A transponder beacon transmitting a coded signal on radar frequency, permitting an interrogating craft to determine the bearing and range of the transponder. (IHO Dictionary – S-32).

For IENCs a radar transponder beacon (racon) may be used to indicate an entrance of a canal or a bridge passage.

### **S-401 Geo Feature: Radar Transponder Beacon (RTPBCN) (M)**

#### **Primitives: Point**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 21.4.1 Radar beacons

Radar beacons are transmitters operating in the marine radar frequency band. The signals produce a characteristic line on a vessel's radar display enabling the boatmaster to determine their position with greater certainty than would be possible by means of a normal radar display alone.

If it is required to encode a radar beacon, it must be done using the feature **Radar Transponder Beacon**.

##### Remarks:

- The **Radar Transponder Beacon** must only be used to encode the technical equipment itself, independent of the building or structure in which it is installed. If it is required to encode the building or structure (for example mast, tower, radar dome), it must be done using an appropriate feature (for example **Building, Landmark**).
- The attribute **signal group** is used to encode Morse identification letter(s) for the radar beacon, where known.
- Leading racons are established such that, when their bearing lines are coincident on a vessel's radar display, the bearing serves to indicate the track to be followed. If it is required to encode the bearing line and the recommended track for leading racons, it must be done as described in clause 15.1. Where the bearing line coincides with a leading line defined by lights or other visual features making up a range system, navigation lines and recommended tracks must not be duplicated. NOTE: All features comprising a range system must have the same value populated for the attribute **scale minimum** (see clause 2.5.9).
- If, for some reason, the radar transponder beacon signal is obscured between certain bearings, this information should be encoded using the complex attribute **sector limit** to encode the "visible" sector, as for lights (see clause 19.3.1.1).
- The sweep period may be encoded using the complex attribute **information** (see clause 2.4.6).

Distinction: Radar Line; Radar Range; Radar Station.

##### Inland specific Encoding Instructions:

- A) The **signal group** (SIGGRP) is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number.
- C) **radar wave length** (RADWAL) and **signal group** (SIGGRP) are relevant for the safety of navigation and should be encoded therefore.

## 22 Geo Features – Services

### 22.1 Pilot boarding place

**IHO Definition: PILOT BOARDING PLACE.** A location offshore where a pilot may board a vessel in preparation to piloting it through local waters. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

#### **S-401 Geo Feature: Pilot Boarding Place (PILBOP) (O)**

**Primitives:** Point, Surface

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 22.1.1 Pilot boarding places

For a pilot boarding place, the pilot vessel may either cruise in the area or come out on request. Off some large ports pilots on outgoing ships may be disembarked at a different location. Pilots may board from a helicopter; it is then less important for a ship to reach the exact position of the boarding place but an approximate position should still be encoded. Some pilot stations are used solely for long-distance (deep-sea) pilots. Pilots may be in constant attendance, in regular attendance at certain limited times, or available by previous arrangement only. The primary purpose of encoded pilotage information is to show the position of the facility. Because of the many variations in the service provided, the main source of information on pilotage must be in an associated publication or product.

If it is required to encode a pilot boarding place, it must be done using the feature **Pilot Boarding Place**.

#### Remarks:

- If it is required to encode the ship to shore or shore to ship contact information, this should be done using the attribute **communication channel**. Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).

- If it is required to encode the area in which pilotage regulations apply, it should be done using the feature **Pilotage District** (see clause 16.19). The relationship between the pilotage district and any associated pilot boarding places should be encoded using the feature association **Pilotage District Association** (see clause 25.8).

- 

#### 22.1.2 Pilot stations ashore

If it is required to encode a pilot station ashore, it must be done using a **Building** or **Landmark** feature, with attribute **function** = 11 (pilot office) or 12 (pilot lookout).

Distinction: Pilotage District.

#### Inland specific Encoding Instructions:

A) Use **status** (STATUS) if it is a temporary pilot boarding place.

## 22.2 Vessel traffic service

**IHO Definition: VESSEL TRAFFIC SERVICE.** The area of any service implemented by a relevant authority primarily designed to improve safety and efficiency of traffic flow and the protection of the environment. It may range from simple information messages, to extensive organisation of the traffic involving national or regional schemes. (IHO Dictionary – S-32).

### **S-401 Geo Feature: Vessel Traffic Service Area (ADMARE) (M)**

#### **Primitives: Surface**

| -                     | <b>Spatial Association</b> (see clause 25.10)   | <b>Spatial Quality</b>                       | Association | 0,*          |

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 22.2.1 Vessel traffic service area

If it is required to encode an area within which a competent authority provides services to vessels as part of a Vessel Traffic Service (VTS), it must be done using the feature **Vessel Traffic Service Area**. The area should be captured based on the limits of the VTS or VTS sector.

Remarks:

- Separate **Vessel Traffic Service Area** features should be captured for individual VTS sectors where appropriate.

Distinction: Administration Area; Custom Zone.

Inland specific Encoding Instructions:

---

## 22.3 Coast Guard station

**IHO Definition:** **COAST GUARD STATION.** A station at which a visual/radio/radar marine watch is kept either continuously or at certain times only. (IHO Dictionary – S-32).

### **S-401 Geo Feature: Coast Guard Station (CGUSTA) (O)**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 22.3.1 Coast Guard stations

The organisation of coast-watching and rescue services differs from country to country. For charting purposes it is assumed that two distinct functions can be recognised, even though they may be parts of the same organisation co-ordinating and effecting life saving and performing other services. Coast Guard stations are stations at which a watch is kept either continuously, or at certain times only. They are sited so as to have a commanding view, are often associated with signal stations, and are visually prominent. They are also referred to as watch-keeping stations.

Coast Guard stations are located along the coasts of most maritime nations. Their primary purpose in former days was to enforce customs regulations, observe the movements of ships and to watch for signs of distress at sea. These functions are largely superseded by modern telecommunications and Search & Rescue (SAR) arrangements, coordinated by regional Maritime Rescue and Coordination Centres (MRCC).

If it is required to encode a Coast Guard station, it must be done using the feature **Coast Guard Station**.

#### Remarks:

- Many modern Coast Guard services no longer maintain visual watch from fixed stations. However, because stations were usually situated so as to have a commanding view and may therefore be visually prominent and make good fixing marks, the buildings may still be encoded as **Building** or **Landmark**.
- The **Coast Guard Station** must only be used to describe the function of the Coast Guard station, independent of the building or structure itself. If it is required to encode the building or structure in which the Coast Guard station operates, it must be done using an appropriate feature (for example **Building**, **Landmark**).
- Maritime Rescue and Coordination Centres (MRCC) are part of a constantly manned communications watch system. If it is required to encode a MRCC, it should be done using **Coast Guard Station**, with the Boolean attribute **is MRCC** = *True*. The name of the station may be populated using the complex attribute **feature name** (sub-attribute **name**), for example *MRCC Swansea*.
- Each VHF-channel should be indicated, using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).

Distinction: Building; Rescue Station.

#### Inland specific Encoding Instructions:

- A) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.
- B) Use **ststus** (STATUS) if any of the conditions apply.

## 22.4 Warning signal station

**IHO Definition: WARNING SIGNAL STATION.** A warning signal station is a place on shore from which warning signals are made to ships at sea. (Adapted from IHO Dictionary – S-32 and Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2012).

For IENCs this includes

- Depth Indicator: Device that shows the real water depth between the actual water level and the bottom of the waterway or isolated dangers under water (e.g., ground sill). The manner in which the device indicates this can either be analog (e.g., by a water level staff / pole - one can read the real water depth directly at the water level) or digital (e.g. by a display).
- External indicator of a gauge, also if the indicator is not directly located at the gauge – this is not the same as a depth indicator (values at gauges are always referred to the zero point of the gauge).
- High Water Mark: Device that shows if official high water levels are reached. This can be indicated either by analogue (e.g., by signs like a staff gauge) or digital (e.g., by a display).
- A signal station showing a warning if an outlet of water (e.g. from a pumping station) causes a current.

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 22.4.1 Warning signal stations

Signal stations communicating visually have declined in importance. They are encoded on the largest optimum display scale IENC data not only for their main role of signalling information and instructions but also as a form of landmark. The signals generally exhibit lights by day and night but may display shapes or flags by day.

If it is required to encode a warning signal station, it must be done using the feature **Signal Station Warning**.

##### Remarks:

- The **Signal Station Warning** must only be used to describe the function of the signal station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using an appropriate feature (for example **Building, Landmark**).
- Each VHF-channel should be indicated, using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).

Distinction: Signal Station Traffic.

##### Inland specific Encoding Instructions:

- EUR: Depth indicators and High Water Marks must be encoded.
- A remote display of a depth indicator has to be encoded in the same way. The name of the related depth indicator has to be encoded as **feature name** (OBJNAM). The value of waterway distance of the related depth indicator can be provided in **information text** (INFORM). The remote display has to be associated to the related **Signal Station Warning** (sistaw) with a **Depth And Clearance Indicator Association**.
- A remote display of a waterway gauge has to be encoded as signal station warning. The name of the related waterway gauge has to be encoded as **feature name** (OBJNAM). The value of waterway distance of the related **waterway gauge** can be provided in **information text**.

(INFORM). The remote display has to be associated to the related **waterway gauge** with the **depth and clearance indicator association**.

- D) Signal Station Warning: possible current because of outlet of water
  - i) A signal station that warns in case of currents caused by outlets of water should be encoded as a **Signal Station Warning** (sistaw) with **category of signal station warning** 1 = warning.
  - ii) An indication of the cause and the form of the warning should be provided in **information (INFORM)**.
  - iii) If e.g. 3 red lights are warning **information text (INFORM)** should be encoded with ""possible current because of outlet of water when red lights are on".
  - iv) For formatted text in an external file, **file reference (TXTDSC)** has to be used.
- E) For high water marks additional information, e.g. "I = 460 cm at gauge Kaub" should be encoded in **information text (INFORM)**.

## 22.5 Traffic signal station

**IHO Definition: TRAFFIC SIGNAL STATION.** A traffic signal station is a place on shore from which signals are made to regulate the movement of traffic. (Adapted from IHO Dictionary – S-32 and S-57 Edition 3.1, Appendix A – Chapter 1, Page 1.155, November 2000).

For IENCs this includes

- Bridge passage signal station: a place on shore from which signals are made for the control of vessels wishing to pass under a bridge.
- Lock signal station: a place on shore from which signals are made for the control of vessels entering or leaving a lock.
- Oncoming traffic indicator: a place on shore from which signals are made to inform about oncoming traffic.
- Port entry and departure: a place on shore from which signals are made for the control of vessels entering or leaving a port.

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 22.5.1 Traffic signal stations

Signal stations communicating visually have declined in importance. They are encoded on the largest optimum display scale IENC data not only for their main role of signalling information and instructions but also as a form of landmark. The signals generally exhibit lights by day and night but may display shapes or flags by day.

The nature of traffic signals varies from country to country and even from port to port. For charting purposes traffic signals can be considered to include, for instance:

- Port entry and departure signals;
- Lock, docking and berthing signals;
- Bridge signals;
- International traffic signals.

If it is required to encode a traffic signal station, it must be done using the feature **Signal Station Traffic**.

#### Remarks:

- If it is required to encode a bridge light marking the centre of a navigable span, it must be done using a light feature (see Section 19).
- The **Signal Station Traffic** must only be used to describe the function of the signal station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using an appropriate feature (for example **Building, Landmark**).
- Each VHF-channel should be indicated, using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).

Distinction: Signal Station Warning.

#### Inland specific Encoding Instructions:

- A) **communication channel** (COMCHA) should not be used, communication area can be given in **Communication Area** (comare) feature.
- B) It's recommended to show the direction of the impact (attribute **direction of impact** (DIRIMP)) if the traffic signal station is only valid for one direction.
- C) If the traffic signal station has an official name it's has to be encoded with the attribute **feature name** (OBJNAM).
- D) The signals for opening bridges have to be included in a **Bridge Aggregation**.
- E) EUR: If the ISRS Location Code is available, it has to be encoded (see 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).

## 22.6 Rescue station

**IHO Definition:** **RESCUE STATION.** A place where equipment for saving life at sea is maintained. (IHO Dictionary – S-32).

### **S-401 Geo Feature:** Rescue Station (RSCSTA) (O)

#### **Primitives:** Point, Surface

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 22.6.1 Rescue station

The organisation of coast-watching and rescue services differs from country to country. For charting purposes it is assumed that these two distinct functions can be recognised individually, even though they may be parts of the same organisation co-ordinating and effecting life saving and performing other services.

Rescue stations are the places at which life saving equipment is held, especially lifeboats (usually in relatively sheltered positions, near sea level). Rescue stations are not necessarily visually prominent. The range of equipment used in rescue is wide, for example search and rescue helicopters; fast, long-distance lifeboats; inflatable inshore lifeboats.

If it is required to encode a rescue station, it must be done using the feature **Rescue Station**.

#### Remarks:

- The **Rescue Station** must only be used to describe the function of the rescue station, independent of the building or structure itself. If it is required to encode the building or structure housing the service, it must be done using an appropriate feature (for example **Building, Landmark**).
- If it is required to encode a refuge beacon, it must be done using a **Special Purpose/General Beacon** feature, with attribute **category of special purpose mark** = 44 (refuge beacon), not by using **Rescue Station**.
- Each VHF-channel should be indicated, using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).

Distinction: Building; Coast Guard Station; Special Purpose/General Beacon.

Inland specific Encoding Instructions:

---

## 22.7 Harbour facility

IHO Definition: **HARBOUR FACILITY.** A Harbour installation with a service or commercial operation of public interest. (S-57 Edition 3.1, Appendix A – Chapter 1, Page 1.81, November 2000).

**S-401 Geo Feature: Harbour Facility (HRBFAC, hrbfac) (O)**

**Primitives: Point, Surface**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 22.7.1 Harbour facilities

If it is required to encode a harbour facility, it must be done using the feature **Harbour Facility**.

#### Remarks:

- Fishing harbours or ports are equipped to provide for the particular needs of fishing boats. Boat harbours and marinas are areas of sheltered water, generally within harbours or ports, set aside for the use of small craft, usually with moorings, buoys, and, in the case of marinas, berthing facilities.
- Depending on the navigational purpose, harbour facilities are defined by: an area including docks, basins, infrastructure such as buildings and dockside equipment; or a point.
- If it is required to encode a terminal with facilities to load/unload or store shipping containers, this should be done using **Harbour Facility** with attribute **category of harbour facility** = 10 (container terminal).
- If it is required to encode a covered structure into which ships can go, this must be done using the feature **Structure Over Navigable Water** (see clause 8.7). These structures may be part of the larger harbour facility, which should be encoded as **Harbour Facility**.
- Each VHF-channel should be indicated using the attribute **communication channel** (see clause 27.107). Alternately, if the same VHF-channel(s) apply to multiple features in the dataset, this should be indicated through an associated instance of the information type **Contact Details**, attribute **communication channel** (see clause 24.1).
- For additional guidance regarding the encoding of vessel speed limits, see clause 17.4.

Distinction: Small Craft Facility; Structure Over Navigable Water.

#### Inland specific Encoding Instructions:

- A) Harbour facilities indicate only the services and not the physical buildings or other structures.
- B) Terminals are not encoded as **Harbour Facility** (HRBFAC, hrbfac) but as **Terminal** (termnl) (see 22.9).
- C) A shipyard on shore is always encoded as **Harbour Facility** (HRBFAC, hrbfac) with **category of harbour facility** (CATHAF) = 9. The single slipways are encoded as **Shoreline Construction** (SLCONS, slcons) (see 8.6). For docks see 8.17 and 8.18.
- D) If the harbour facility has a special time schedule or special operating hours apply, the feature can be combined with a time schedule. For this purpose please refer to the time schedule (general) feature **Time Schedule – In General** (tisdge) see 24.6. Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- E) If a structured external XML-file with more detailed communication information is available, the reference to the file must be entered in the **file reference** (TXTDSC) attribute.
- F) Harbour master's offices, pilot offices, water police offices and custom offices are encoded as **Building** (BUISGL).
- G) Only code **Harbour Facility** (HRBFAC, hrbfac) (S) feature when extents of a marina are known. Use **Harbour Facility** (HRBFAC, hrbfac) (P) when extents are not known.

## 22.8 Small craft facility

**IHO Definition: SMALL CRAFT FACILITY.** A place at which a service generally of interest to small craft or pleasure boats is available. (S-57 Edition 3.1, Appendix A – Chapter 1, Page 1.162, November 2000).

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 22.8.1 Small craft facilities

If it is required to encode a small craft facility, it must be done using the feature **Small Craft Facility**.

#### Remarks:

- The **Small Craft Facility** must only be used to encode the function. In addition, if it is required to encode a physical feature (for example building), it must be done using an appropriate feature (for example **Building**).
- Due to possible Inland ECDIS or ECS display issues **Small Craft Facility** features of type surface should only be encoded on **Land Area**, **Shoreline Construction**, **Hulk** or **Pontoon** features of type surface.

Distinction: Building; Harbour Facility; Shoreline Construction; Structure Over Navigable Water.

#### Inland specific Encoding Instructions:

- A) If the small craft facility has a special time schedule or special operating hours apply, the feature can be combined with a time schedule. For this purpose please refer to the **Time Schedule – In General** feature (tisdge) see 24.6. Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- B) For bunker, fuel and water supply for commercial vessels see 22.11, for refuse dump see 22.12.
- C) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.

## 22.9 Terminal

**IHO Definition:** A terminal covers that area on shore which provides buildings and constructions for the transfer of cargo or passengers from and to ships.

### **S-401 Geo Feature: Terminal (termnl) (C)**

#### **Super Type:**

**Primitives:** point, surface

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

#### Inland specific encoding instructions:

- A) Terminals are not encoded as **Harbour Facility** (HRBFAC, hrbfac) but as **Terminal** (termnl).
- B) A terminal covers the landside area in which all the transshipping facilities and warehouses are located.

- C) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.
- D) If the terminal has a special time schedule or special operating hours apply, the object can be combined with a time schedule. For this purpose please refer to the **Time Schedule – In General** feature (tisdge) see 24.6. Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- E) EUR: If the ISRS Location Code is available it has to be encoded (refer to 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).
- F) EUR: Terminals must be encoded. If the borderline of the area is not known, the terminal has to be encoded at least as a point feature.
- G) EUR: Category of harbour facility 18 (official transshipment point for large-volume and heavy goods) and transshipping goods 11 (large-volume and heavy goods (exceptional transport)) should be encoded in accordance with the national definitions of such transports.
- H) EUR: If a large-volume and heavy goods transshipment point can only be used temporarily because it mainly serves other purposes, e.g. as a ferry ramp, the attribute (C) STATUS = 7 (temporary) must be set.

## 22.10 Vehicle Transfer

**IHO Definition:** A place where vehicles can be loaded or unloaded from the inland vessel with onboard or on-shore facilities.

### **S-401 Geo Feature: Vehicle Transfer (vehtrf) (O)**

#### **Super Type:**

**Primitives:** point, surface

#### Feature Associations

| S-401 Role            | Association Type                                         | Associated to                                                                                                   | Type        | Multiplicity |
|-----------------------|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|-------------|--------------|
| The Component         | <b>Anchorage Or Berth Aggregation</b> (see clause 25.18) | <b>Anchorage Area, Anchor Berth, Berth, Mooring Area</b>                                                        | Association | 0,*          |
| The Collection        | <b>Notice Mark Aggregation</b> (see clause 0)            | <b>Notice Mark</b>                                                                                              | Aggregation | 0,*          |
| The Updated Object    | <b>Updated Information</b> (see clause 25.17)            | <b>Update Information</b>                                                                                       | Association | 0,*          |
| The Position Provider | <b>Text Association</b> (see clause 25.13).              | <b>Text Placement</b>                                                                                           | Composition | 0,1          |
| -                     | <b>Additional Information</b> (see clause 25.1)          | <b>Contact Details, Non-Standard Working Day, Service Hours, Nautical Information, Time Schedule in General</b> | Association | 0,*          |
| -                     | <b>Spatial Association</b> (see clause 25.11)            | <b>Spatial Quality</b>                                                                                          | Association | 0,*          |

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

#### Inland specific encoding instructions:

- A) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.

- B) If the vehicle transport location has a special time schedule or special operating hours apply, the object can be combined with a time schedule. For this purpose please refer to the **Time Schedule – In General** feature (tisdge) (24.6) Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- C) EUR: If the ISRS Location Code is available it has to be encoded (refer 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).
- D) Use **name of vertical river datum reference level** (vcrlev) and **vertical river datum reference level value** (vcrval) if the local value and name of vertical river datum reference level (design waterlevel ) is known.

## 22.11 Bunker Station

**IHO Definition:** A station, at which a ship is able to bunker fuel, water or ballast or to obtain electrical power supply.

**S-401 Geo Feature: Bunker Station (bunsta) (O)**

**Super Type:**

**Primitives:** point

*Real World*

*power supply station*

*Paper Chart Symbol*

*Inland ECDIS or ECS Symbol*

*Fueling station*

*Power supply station*

| The Position Provider | <b>Text Association</b> (see clause 25.13).              | <b>Text Placement</b>                                                                                           | Composition | 0,1          |
| -                     | <b>Additional Information</b> (see clause 25.1)          | <b>Contact Details, Non-Standard Working Day, Service Hours, Nautical Information, Time Schedule In General</b> | Association | 0,*          |
| -                     | <b>Spatial Association</b> (see clause 25.11)            | <b>Spatial Quality</b>                                                                                          | Association | 0,*          |

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

Inland specific Encoding Instructions:

- A) Use **information** (INFORM) attribute just in case important information, which is not already encoded, has to be provided to boatmasters.
- B) The attribute **category of bunker vessel** (CATBUN) is of LIST type and hence more than one value may be chosen.
- C) If the station has a special time schedule or special operating hours apply, the feature can be combined with a time schedule. For this purpose please refer to the **Time Schedule – In General** feature (tisdge) (24.6) Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- D) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.
- E) The feature can be used as surface feature, for example when the station is on a pontoon. In that case the pontoon has only to be coded separately, if no depth data is available underneath.
- F) EUR: If the ISRS Location Code is available it has to be encoded (refer to 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).
- G) The attribute **information** (INFORM) can be used to describe additional types of fuel or to indicate that a fuel is provided in a swappable container.

## 22.12 Refuse Dump

**IHO Definition:** At a refuse dump ships are able to unload their refuse like waste oil or black water.

### **S-401 Geo Feature: Refuse Dump (refdmp) (O)**

#### **Super Type:**

#### **Primitives: point**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

Inland specific encoding instructions:

- A) Use **information** (INFORM) attribute just in case important information, which is not already encoded, has to be provided to boatmasters.
- B) The attribute **category of refuse dump** (refdmp) is of LIST type and hence more than one value may be chosen.
- C) If the refuse dump has a special time schedule or special operating hours apply, the feature can be combined with a time schedule. For this purpose please refer to the **Time Schedule – In General** feature (tisdge) (24.6). Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.
- D) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the **file reference** (TXTDSC) attribute.
- E) EUR: If the ISRS Location Code is available it has to be encoded (refer to 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).

## 22.13 Communication Area

**IHO Definition:** Indicates the coverage of an area, in which a vessel has to report or may request information.

### **S-401 Geo Feature: Communication Area (comare) (C)**

#### **Super Type:**

#### **Primitives: surface**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

#### Inland specific Encoding Instructions:

- A) EUR: A communication area can be defined by notice marks (signs B.11 or E.23, see 20.17) or by regulations. Communication areas at locks should include the waiting areas and advance signals. The communication area at bridges should cover about 1 to 1,5 km on both sides of the bridge, depending on the normal radar range.
- B) Use **Communication Area** (comare) feature.
- C) If there is a reporting duty at a specific point/line use **Radio Calling-In Point** (rdocal) feature. (Refer to 15.18)
- D) The purpose of communication area should be given in the **category of communication** (CATCOM) attribute.
- E) The channel number assigned to a specific radio frequency, frequencies or frequency band has to be indicated in the **communication channel** (COMCHA) attribute.
- F) EUR: The **status** (STATUS) attribute should be used to indicate whether communication is recommended (sign E.23) or mandatory (sign B.11).
- G) Detailed communication information (postal address, phone, fax, e-mail etc.) should also be encoded in the respective feature.
- H) A communication area for customs (BUISGL, chkpnt) or harbours (hrbare, prtare, hrbbsn) should indicate in the feature name for which custom, port or harbour it is.
- I) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in **file reference** (TXTDSC). If some other means of communication is used for time-critical navigation-related communication, this should be mentioned in the remarks of the XML-file.

- J) EUR: **Communication Areas** must be encoded.
- K) For areas where Wireless Networks are available free of charge **category of communication** (CATCOM) 9 = WLAN area should be used. **Communication channel** (COMCHA) shall be coded as "unknown". The network name (SSID = Service Set Identifier) shall be coded within **feature name** (OBJNAM), whereas **information** (INFORM) can be used to provide additional information as intended coverage, encryption, available services, etc.

## 22.14 Sensor

**IHO Definition:** A device that responds to a physical stimulus (as heat, light, sound, pressure, magnetism or a particular motion) and transmits a resulting impulse (as for measurement or operating a control).

### **S-401 Geo Feature: Sensor (sensor) (O)**

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

Inland specific encoding instructions:

- A) For a sensor used to reduce or to turn off bridge lighting, choose appropriate **category of sensor** (catsen) and **function of sensor** (fnctsn) = 1 (reduce bridge lighting).
- B) If **category of sensor** (catsen) = 3 (radio activated), **communication channel** (COMCHA) must be used. The attribute **communication channel** encodes the various VHF-channels used for communication. Each VHF-channel should be indicated by 2 digits and up to 2 characters (A-Z), e.g. VHF-channel 7 --> 07', VHF-channel 16 --> 16'. The indication of several VHF-channels is possible.
- C) Details associated with **category of sensor** (catsen), e.g., "The decorative lights can be extinguished for 15-minutes by setting your VHF-FM radio to Channel 28 and rapidly clicking the mic 3 times", shall be encoded in the **information** (INFORM) field.

## 22.15 Waterway Gauge

| <b>IHO Definition:</b> An instrument for measuring water levels. |                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |      |              |

† Complex attribute **feature name**, sub-attribute **name usage** is mandatory if the name is intended to be displayed when display of names is enabled by the boatmaster. See clause 2.5.8.

### Inland specific encoding instructions:

- A) The waterway gauge may be encoded as a point feature at the location of the real world entity. Preferably the gauge should be encoded as a surface feature covering its complete area of applicability (to be decided by the chart producer if this area covers only the fairway or the complete riverbed).

- B) The name of the gauge shall be encoded by **feature name** (OBJNAM). As the name the term known by the boatmasters shall be chosen. In case an additional name in e.g., Cyrillic letters is well known this name may be encoded in accordance with 2.5.8.
- C) EUR: If the ISRS Location Code is available it has to be encoded (refer to 2.4.13). If a maritime MRN or RIS-ID is available, the attribute **interoperability identifier** must be encoded (refer to **Fehler! Verweisquelle konnte nicht gefunden werden.**).
- D) Category of the gauge may be encoded by using the **category of waterway gauge** (catgag) attribute.
- E) The river km or mile of the location of the gauge shall be encoded by using the **waterway distance** (wtwdis) attribute.
- F) The zero point of the gauge is defined by the attributes **elevation** (ELEVAT) (indicating the units above the locally used gravitational level) and **reference gravitational level** (reflev), indicating the used gravitational level itself (also refer to the picture below).
- G) When a gauge is encoded as a point feature (mainly in case a water level model is available), the area of applicability may be provided by a specific distance of impact, down and up stream using the attributes **distance of impact, downstream** (disipd) and **distance of impact, upstream** (disipu) . **Distance of impact, downstream** (disipd) and **distance of impact, upstream** (disipu) should be used for both point and surface features.
- H) Reference to specific defined water levels shall be enabled.
1. For high water levels:
    - **value at relevant high water level** (higwat) to indicate the defined high water level (e.g. 567 cm)
    - **name of relevant high water level** (hignam) to indicate the specific high water level including the year of publication or a period indication (e.g., HSW96)
  2. For mean water levels:
    - **value at relevant mean water level** (meawat) to indicate the mean water level (value and units)
    - **name of relevant mean water level** (meanam) to indicate the specific mean water level including the year of publication or a period indication (name and year)
  3. For low water levels:
    - **value at relevant low water level** (lowwat) to indicate the low water level (value and units)
    - **name of relevant low water level** (lownam) to indicate the specific low water level including the year of publication or a period indication (name and year)
- In the event that there is another specific and important water level, this may be encoded by using the attributes **value at other locally relevant water level** (othwat) and **name of other locally relevant water level** (othnam).
- I) In order to enable IENC based applications to calculate clearances and depths automatically the following information is used: Vertical clearances at bridges shall always be referred to a specific water level. This level shall be indicated within the **name of vertical river datum reference** (vcrlev) attribute (preferably according to the list of **vertical datum** (VERDAT) values. This water level should be the same as indicated in **name of relevant high water level** (hignam).
- J) The same way as in the last point shall be followed for providing information on the reference water level for depth information. In this case the attribute **name of sounding datum reference level** (sdrlev) may be used and should be equal to **name of reference low water level** (lownam) in most cases.

- K) EUR: Waterway gauges that are relevant and useable for navigation must be encoded.
- L) A remote display of gauge has to be encoded as a Warning Signal Station (see clause x). The waterway gauge has to be included in the **Depth And Clearance Indicator Association**.
- N) Use **name of vertical river datum reference** (vcrlev) and **vertical river datum reference level value** (vcrval) if the local value and name of vertical river datum reference level (design waterlevel) is known.
- O) Use **name of sounding datum reference level** (sdrlev) and **sounding datum reference level value** (sdrval) if the local value and name of vertical river datum reference level (design waterlevel) is known.

\* The sounding or vertical datum (reference level) are defined either in

- in the cell header (valid for all features in the cell)
- at the meta features m\_sdat or m\_vdat, if another value than in cell header
- at the feature itself (attribute verdat), if another value than in cell header or meta feature

## 23 Cartographic Features

### 23.1 Text placement

IHO Definition: **TEXT PLACEMENT.** The Text Placement feature is used in association with the Feature Name attribute or a light description to optimize text positioning in Inland ECDIS and ECS.

### 23.1.1 Text placement

If it is required to place text on an IENC to improve clarity and readability of display, it must be done using the cartographic feature **Text Placement**. In navigationally relevant areas such as shipping channels and dredged areas, where default Inland ECDIS or ECS text positioning may cover other features, Data Producers should consider using **Text Placement**. The **Text Placement** feature must be associated with the relevant geo feature using the composition **Text Association** (see clause 25.13).

NOTE: Where an associated instance of **Text Placement** has not been related to a feature having the attribute **name** and/or the attributes associated with the characteristics of a light populated, the text will be positioned in the Inland ECDIS or ECS display in accordance with the default position for text strings defined in the Portrayal Catalogue.

#### Remarks:

- The **Text Placement** cartographic feature is used by the Inland ECDIS or ECS to optionally position text in Inland ECDIS or ECS, which has been populated using an attribute(s) for the associated feature. The attribute(s) is identified by populating the mandatory attribute **text type**.
- Where two instances of **text type** are populated for a **Text Placement** instance, the feature name and characteristics as derived from the target feature attribution will be vertically aligned in the Inland ECDIS or ECS display in accordance with the defined text offset bearing and distance. If it is required to position the feature name and the feature characteristics independently, this must be done by associating two instances of **Text Placement**, one having **text type** = 1 (name) and the other having **text type** = 2 (feature characteristic), to the target feature. Note, however, that independent vertical or horizontal alignment of both the name and the characteristic of a feature is not recommended, as the text will overlap as the boatmaster zooms to smaller scales than the optimum display scale for the data.
- The attributes **text offset bearing** and **text offset distance** define the bearing (related to true north) and distance of the anchor point of the text, in millimetres in the Inland ECDIS or ECS display, to be displayed from the associated feature. The values populated for these attributes must be determined based on the desired position of the text at the optimum display scale of the IENC data. Note that the attribute **text offset bearing** does not rotate the text itself, but determines the alignment of the anchor point (or justification) for the text location (horizontal (left, centred or right) and vertical (bottom, centre or top)) based on the encoded bearing. Displayed text will always appear horizontal regardless of the display mode set by the boatmaster (north-up or course-up), unless the Boolean attribute **text rotation** is set to *True*.
- The Boolean attribute **text rotation**, when populated as *True*, will rotate the text on the Inland ECDIS or ECS display to align along the bearing populated for the attribute **text offset bearing**.
- Data Producers are advised to determine the best positioning for text at the optimum display scale for the data; and based on “north-up” Inland ECDIS or ECS display. While **text offset bearing**, **text offset distance** and **text rotation** will position the text at the same location relative to the associated feature at all boatmaster’s Selected Viewing Scales, Data Producers are advised that, as the boatmaster zooms out to smaller viewing scales, text may unintentionally cover other charted detail. Therefore, as an alternative, Data Producers may experiment with positioning the text so that it clears the majority of other charted features at the smallest scale at which the text is intended to be displayed, and populating the attribute **scale minimum** accordingly (see bullet below). Data Producers are also advised that optimum results may not be achieved when the boatmaster has set the display setting for the Inland ECDIS or ECS to screen rotations other than “north-up”. Encoders should also consider the positioning of the name of a feature where the name is encoded in multiple languages, as the name displayed may be of varying character length based on the boatmaster’s language settings (see clause 2.5.8).
- The attribute **scale minimum** may be used to determine a scale at which the text string is no longer visible in the Inland ECDIS or ECS when scale minimum functionality is enabled. Where populated, the value for **scale minimum** on **Text Placement** must not be set to a smaller scale value than the value populated for the associated feature.

- S-401 portrayal for **Text Placement** has been developed to take into account the name of a light support structure feature where included in the association **Structure/Equipment** as follows:
  - Where **Text Placement** containing attribute **text type** = 1 (name) is associated to the equipment feature and the name has been encoded only on the structure feature, the **Text Placement** inherits the name from the structure.
  - Where **Text Placement** containing attribute **text type** = 1 (name) is associated to the equipment feature and the name has been encoded on the equipment feature, the **Text Placement** takes the name from the equipment feature. If a name has also been included on the structure feature, this will not be considered in this case, however a separate **Text Placement** associated to the structure may be encoded to place the name of the structure feature at a desired position, if required.
  - Where **Text Placement** containing attribute **text type** = 2 (feature characteristic) is associated to the equipment feature, the characteristics of the structure feature will not be considered.
- **Text Placement** should normally be associated with features of type point, but may be used for features of type curve and surface.

### Feature Associations

| S-401 Role      | Association Type                                 | Associated to | Type        | Multiplicity |
|-----------------|--------------------------------------------------|---------------|-------------|--------------|
| The Information | <b>Additional Information</b> (see clause 25.1). | See next row  | Association | 0,1          |

**Associated to:** Administration Area, Airport/Airfield, Anchor Berth, Anchorage Area, Berth, Bridge, Building, Cable Area, Bunker Station, Cable Overhead, Cable Submarine, Cardinal Beacon, Cardinal Buoy, Checkpoint, Coast Guard Station, Communication Area, Conveyor, Crane, Daymark, Dock Area, Dolphin, Dry Dock, Emergency Wreck Marking Buoy, Exceptional Navigation Structure, Ferry Route, Fishing Facility, Floating Dock, Fog Signal, Gate, Harbour Area (Administrative), Harbour Basin, Harbour Facility, Helipad, Installation Buoy, Isolated Danger Beacon, Isolated Danger Buoy, Landmark, Land Region, Lateral Beacon, Lateral Buoy, Light All Around, Light Sector, Lock Basin, Lock Basin Part, Marine Farm/Culture, Mooring Area, Mooring Buoy, Mooring Trot, Mooring Buoy, Offshore Platform, Offshore Production Area, Pilot Boarding, Pilotage District, Place, Pipeline Overhead, Pipeline Submarine/On Land, Port Area, Production/Storage Area, Radar Range, Radar Station, Radio Calling-In Point, Radio Station, Railway, Refuse Dump, Rescue Station, Runway, Safe Water Beacon, Safe Water Buoy, Seaplane Landing Area, Sensor, Signal Station Traffic, Signal Station Warning, Silo/Tank, Small Craft Facility, Span Fixed, Span Opening, Special Purpose/General Beacon, Special Purpose/General Buoy, Submarine Pipeline Area, Terminal, Tunnel, Turning Basin, Vehicle Transfer, Vessel Traffic Service Area, Waterway Gauge, Wind Turbine

† For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

#### 24.1.1 Contact details

If it is required to encode the contact information (communication channel, call sign, radio frequency etc.), it may be done using the information type **Contact Details**. Each instance of **Contact Details** must be associated to the feature(s) to which the information applies using the association **Additional Information** (see clause 25.1).

#### Remarks:

- The frequency at which vessels receive signals must be populated, where required, using complex attribute **frequency pair**, sub-attribute **frequency shore station transmits**. The frequency at which vessels send signals to shore must be populated, where required, using complex attribute **frequency pair**, sub-attribute **frequency shore station receives**.
- Where required, the values populated within the complex attribute **frequency pair** must be quoted in Hertz, for example a signal frequency of 950 MHz must be encoded as 950000000.

**Distinction:** Communication Area, Nautical Information.

#### Inland specific Encoding Instructions:

- If there is a defined area with a reporting requirement or available VHF information services the feature **Communication Area** (see clause 22.13) has to be used. The information feature **Contact Details** is always connected to the geometry of the associated feature.
- Contact details can also be provided in an external XML that is referenced in **file reference** of the respective feature. If the information should be available for maritime vessels it is recommended to use **Contact Details**.
- If contact details are provided as a web service the address can be encoded in the complex attribute **online resource**.

## 24.2 Service hours

**IHO Definition:** **SERVICE HOURS.** The time when a service is available and known exceptions.

**S-401 Information Type:** Service Hours ©

**Primitives:** No Geometry

### Feature Associations

| S-401 Role      | Association Type                                 | Associated to | Type        | Multiplicity |
|-----------------|--------------------------------------------------|---------------|-------------|--------------|
| The Information | <b>Additional Information</b> (see clause 25.1). | See next row  | Association | 0,1          |

**Associated to:** Airport/Airfield, Anchor Berth, Anchorage Area, Berth, Bridge, Building, Bunker Station, Checkpoint, Coast Guard Station, Communication Area, Conveyor, Crane, Dock Area, Dry Dock, Exceptional Navigation Structure, Ferry Route, Floating Dock, Gate, Helipad, Landmark, Lock Basin, Lock Basin Part, Mooring Area, Production/Storage Area, Radio Calling-In Point, Refuse Dump, Runway, Seaplane Landing Area, Sensor, Small Craft Facility, Span Fixed, Span Opening, Terminal, Vehicle Transfer

† For each instance of **time intervals by day of week**, at least one of the sub-attributes **day of week**, **time of day start** or **time of day end** must be populated. Where populated, the number of instances of **time of day start** must be the same as the number of instances of **time of day end**.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 24.2.1 Service hours

If it is required to encode the time schedules for the operation of a service (for instance the opening and closing times for the opening spans of a bridge), it may be done using the information type **Service Hours**. Each instance of **Service Hours** must be associated to the feature(s) to which the information applies using the association **Additional Information** (see clause 25.1).

#### Remarks:

- The complex attribute **time intervals by day of week**, sub-attribute **day of week is range** indicates whether an instance of **time intervals by day of week** encodes a range of days or discrete days. The day(s) or day range(s) are encoded using sub-attribute **day of week**. Where **day of week is range** is populated as *True*, there must be exactly two instances of the attribute **day of week**. If **day of week** is not populated, this indicates that the same schedule applies every day (Monday through

Sunday). Multiple ranges or mixing range with discrete days(s) is not allowed (if this is required another instance of **time intervals by day of week** must be encoded). See clause 2.4.9.

- Overlapping intervals bound to the same feature using the association **Additional Information** are not permitted.
- The complex attributes **fixed date range** and **periodic date range**, when populated for **Service Hours**, apply only to **Service Hours** and not to any feature that it may be associated with.

Distinction: Nautical Information; Non-Standard Working Day.

Inland specific Encoding Instructions:

- A) Service hours can also be provided in an external XML that is referenced in **file reference** of the respective feature. If the information should be available for maritime vessels it is recommended to use Service Hours.
- B) If service hours are provided as a web service the address can be encoded in the complex attribute **online resource**.

## 24.3 Non-standard working day

**IHO Definition: NON-STANDARD WORKING DAY.** Days when many services are not available. Often days of festivity or recreation or public holidays when normal working hours are limited, especially a national or religious festival, etc. (S-127 Edition 1.0.0).

### **S-401 Information Type: Non-Standard Working Day (C)**

#### **Primitives: No Geometry**

#### **Feature Associations**

| S-401 Role      | Association Type                                 | Associated to | Type        | Multiplicity |
|-----------------|--------------------------------------------------|---------------|-------------|--------------|
| The Information | <b>Additional Information</b> (see clause 25.1). | See next row  | Association | 0,1          |

**Associated to:** Airport/Airfield, Anchor Berth, Anchorage Area, Berth, Bridge, Building, Bunker Station, Checkpoint, Coast Guard Station, Communication Area, Conveyor, Crane, Dock Area, Dry Dock, Exceptional Navigation Structure, Ferry Route, Floating Dock, Gate, Helipad, Landmark, Lock Basin, Lock Basin Part, Mooring Area, Production/Storage Area, Radio Calling-In Point, Refuse Dump, Runway, Seaplane Landing Area, Sensor, Small Craft Facility, Span Fixed, Span Opening, Terminal, Vehicle Transfer

† At least one of the attributes **date fixed** or **date variable** must be populated.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

### 24.3.1 Non-standard working days

If it is required to encode the date(s) when an event, festival or national holiday occurs each year, it may be done using the information type **Non-Standard Working Day**. Each instance of **Non-Standard Working Day** must be associated to the feature(s) to which the information applies using the association **Additional Information** (see clause 25.1).

#### Remarks:

- The attribute **date fixed** encodes the date when a festival or national holiday recurs on the same day each year in the Gregorian calendar.
- The complex **date variable** encodes a day which is not fixed in the Gregorian calendar, for instance “the fourth Thursday in November”; “Easter Sunday”.
- The complex attributes **fixed date range** and **periodic date range**, when populated for **Non-Standard Working Day**, apply only to **Non-Standard Working Day** and not to any feature that it may be associated with.
- The complex attribute **information** (see clause 2.4.6) is used to encode any special conditions or regulations that exist in relation to the date/day populated.

Distinction: Nautical Information; Service Hours.

#### Inland specific Encoding Instructions:

- A) Non standard working days can also be provided in an external XML that is referenced in **file reference** of the respective feature. If the information should be available for maritime vessels it is recommended to use Non Standard Working Days.
- B) If non standard working days are provided as a web service the address can be encoded in the complex attribute **online resource** of the Information Type **Service Hours**.

## 24.4 Nautical information

**IHO Definition:** NAUTICAL INFORMATION. Nautical information about a related area or facility.

**S-401 Information Type:** Nautical Information (O)

**Primitives:** No Geometry

| The Information | Additional Information (see clause 25.1). | See next row  | Association | 0,1          |

**Associated to:** Administration Area, Airport/Airfield, Anchor Berth, Anchorage Area, Berth, Bollard, Bridge, Building, Built-Up Area, Bunker Station, Cable Area, Cable Overhead, Cable Submarine, Canal, Cardinal Beacon, Cardinal Buoy, Cargo Transshipment Area, Causeway, Caution Area, Checkpoint, Coastline, Coast Guard Station, Collision Regulations Limit, Communication Area, Conveyor, Crane, Current – Non-Gravitational, Custom Zone, Dam, Daymark, Depth Area, Depth Contour, Distance Mark, Dock Area, Dolphin, Dredged Area, Dry Dock, Dumping

Ground, Dyke, Emergency Wreck Marking Buoy, Exceptional Navigation Structure, Fairway, Fairway System, Fence/Wall, Ferry Route, Fishing Facility, Floating Dock, Fog Signal, Fortified Structure, Foul Ground, Free Port Area, Gate, Gridiron, Harbour Area (Administrative), Harbour Basin, Harbour Facility, Helipad, Hulk, Information Area, Inshore Traffic Zone, Installation Buoy, Isolated Danger Beacon, Isolated Danger Buoy, Lake, Land Area, Land Elevation, Landmark, Land Region, Lateral Beacon, Lateral Buoy, Light Air Obstruction, Light All Around, Light Sector, Lock Basin, Lock Basin Part, Magnetic Variation, Marine Farm/Culture, Military Practice Area, Mooring Area, Mooring Buoy, Mooring Trot, Navigation Line, Notice Mark, Obstruction, Offshore Platform, Offshore Production Area, Oil Barrier, Physical AIS Aid to Navigation, Pile, Pilotage District, Pilot Boarding Place, Pipeline Overhead, Pipeline Submarine/On Land, Pontoon, Port Area, Precautionary Area, Production/Storage Area, Pylon/Bridge Support, Radar Line, Radar Range, Radar Reflector, Radar Station, Radar Transponder Beacon, Radio Calling-In Point, Radio Station, Railway, Recommended Route Centreline, Recommended Track, Recommended Traffic Lane Part, Refuse Dump, Rescue Station, Restricted Area, River, Road, Runway, Safe Water Beacon, Safe Water Buoy, Sandwave, Sea Area/Named Water Area, Seabed Area, Seagrass, Seaplane Landing Area, Sensor, Shoreline Construction, Signal Station Traffic, Signal Station Warning, Silo/Tank, Slope Topline, Sloping Ground, Small Craft Facility, Sounding, Span Fixed, Span Opening, Special Purpose/General Beacon, Special Purpose/General Buoy, Straight Territorial Sea Baseline, Structure Over Navigable Water, Submarine Pipeline Area, Terminal, Tidal Stream Panel Data, Tidal Stream – Flood/Ebb, Tideway, Separation Zone or Line, Traffic Separation Scheme, Traffic Separation Scheme Boundary, Traffic Separation Scheme Crossing, Traffic Separation Scheme Lane Part, Tunnel, Turning Basin, Two-Way Route, Two-Way Route Part, Underwater/Awash Rock, Unsurveyed Area, Vegetation, Vehicle Transfer, Vessel Traffic Service Area, Water Turbulence, Waterway Area, Waterway Gauge, Weed/Kelp, Wind Turbine, Wreck

† At least one of the attributes **information** or **pictorial representation** must be populated.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

For each instance of **information**, at least one of the sub-attributes **file reference** or **text** must be populated.

#### 24.4.1 Nautical information

If it is required to encode identical information associated with multiple geo features which cannot be encoded using the descriptive attributes on those features, it should be done using the information type **Nautical Information**. Each instance of **Nautical Information** must be associated to the feature(s) to which the information applies using the association **Additional Information** (see clause 25.1).

##### Remarks:

- Within a dataset, individual instances of information associated with a geo feature which cannot be encoded using the descriptive attributes on the feature should be encoded using the attributes **information** or **pictorial representation** on the feature itself, not using **Nautical Information**. However where this information is shared between features contained in a single dataset, or included in multiple datasets within the IENC portfolio, **Nautical Information** may be used.
- **Nautical Information** must not be used to include a reference to a picture file (attribute **pictorial representation**) to a feature that does not itself include **pictorial representation** as an allowable attribute.
- The complex attributes **fixed date range** and **periodic date range**, when populated for **Nautical Information**, apply only to **Nautical Information** and not to any feature that it may be associated with.

Distinction: Information Area; Update Information.

##### Inland specific Encoding Instructions:

- Encode **feature name** only if the name should be displayed.
- Interoperability Identifier should be encoded if the whole association has an own identifier. For the ISRS location code see clause 2.4.13).

## 24.5 Spatial quality

**IHO Definition: SPATIAL QUALITY.** The indication of the quality of the locational information for features in a dataset.

### **S-401 Information Type: Spatial Quality (O)**

#### **Primitives: No Geometry**

#### **Feature Associations**

| <b>S-401 Role</b>           | <b>Association Type</b>                                          | <b>Associated to</b>               | <b>Type</b> | <b>Multiplicity</b> |
|-----------------------------|------------------------------------------------------------------|------------------------------------|-------------|---------------------|
| for the Quality Information | <b>Quality of Bathymetric Data Composition</b> (see clause 25.9) | <b>Quality of Bathymetric Data</b> | Association | 0,1                 |
| for the Quality Information | <b>Spatial Association</b> (see clause 25.10).                   | Spatial types (see clause 2.4.7)   | Association | 0,1                 |

<sup>†</sup> At least one of the attributes **quality of horizontal measurement** or **spatial accuracy** must be encoded.

The sub-complex attribute **fixed date range** is mandatory if more than one instance of the complex attribute **spatial accuracy** is encoded.

For each instance of **fixed date range**, at least one of the sub-attributes **date end** or **date start** must be populated.

### **24.5.1 Spatial quality**

Spatial attribute types must contain a referenced geometry and may be associated with spatial quality attributes. Each spatial attribute instance must be referenced by a feature instance or another spatial attribute instance.

Spatial quality attributes are carried in the information type **Spatial Quality**. Only point, multipoint and curve geometry and the Meta feature **Quality of Bathymetric Data** can be associated with spatial

quality. Each instance of **Spatial Quality** must be associated to the geometry to which the information applies using the association **Spatial Association** (see clause 25.10); or in the case of **Spatial Quality** associated with **Quality of Bathymetric Data**, using the association **Quality of Bathymetric Data Composition** (see clause 25.9).

Remarks:

- The sub-complex attributes **horizontal position uncertainty** and **vertical uncertainty** must be encoded using either **Spatial Quality** or the Meta feature **Quality of Bathymetric Data** (see clause 3.8) to provide the spatial accuracy components for provision of an overall indication of the quality of bathymetric data for an area. The decision as to which option to use should be based on whether the horizontal position and vertical uncertainty values are specific to a single **Quality of Bathymetric Data** feature or relate to multiple **Quality of Bathymetric Data** features. In general, specific values are related to areas of changeable bathymetry over time or varying bathymetric data quality in the water column (as shown in Figure 3-2 in clause 3.8.1); and common values are specific to general quality uncertainty values in non-changeable areas. It is prohibited to use both options for a single **Quality of Bathymetric Data** instance.
- The complex attribute **spatial accuracy** is used to specify the vertical and horizontal position uncertainty, which may degrade in changeable areas over time. In order to provide the spatial accuracy components for provision of an overall indication of the quality of bathymetric data for an area, an instance of **Spatial Quality** may be associated with one or more instances of **Quality of Bathymetric Data** using the association **Quality of Bathymetric Data Composition** (see clauses 3.8 and 25.9); or encoded using the complex attribute **zone of confidence** on the **Quality of Bathymetric Data** itself. Where the attribute **category of temporal variation** for the associated **Quality of Bathymetric Data** is set to values 2 (likely to change and significant shoaling expected) or 3 (likely to change but significant shoaling not expected) and the spatial accuracy is encoded using **Spatial Quality**, multiple instances of **spatial accuracy** should be encoded to provide an indication of the degradation of the vertical and horizontal position accuracy of the charted bathymetric information over time. Where multiple instances of **spatial quality** are encoded, these must correspond to the number of instances and values (including the zone of confidence categories and date ranges) populated for the complex attribute **zone of confidence** on the associated **Quality of Bathymetric Data** feature.
  - The sub-complex attribute **fixed date range** is used, where required, to define the date range(s) where the spatial accuracy is degraded over time. Where multiple date ranges are specified, the attributes **date start** and **date end** for each instance of **fixed date range** must be equal to the corresponding instances of **zone of confidence (fixed date range)** for the associated **Quality of Bathymetric Data** feature (see clause 3.8).
  - The sub-complex attribute **vertical uncertainty**, where encoded, is used to specify the vertical uncertainty of the depths covered by the associated **Quality of Bathymetric Data** feature within a specified date range (where encoded); and should be adjusted to indicate the degradation of the vertical uncertainty over time where multiple instances of **zone of confidence** are encoded (see above). When **depth range minimum value** is specified for the associated **Quality of Bathymetric Data** feature, **vertical uncertainty** refers only to the uncertainty of the swept depth defined by **depth range minimum value**.
  - The sub-complex attribute **horizontal position uncertainty**, where encoded, is used to specify the positional uncertainty of the depths covered by the associated **Quality of Bathymetric Data** feature within a specified date range (where encoded); and should be adjusted to indicate the degradation of the horizontal position uncertainty over time where multiple instances of **zone of confidence** are encoded (see above).
  - The sub-attribute **quality of horizontal measurement** must not be populated for **Spatial Quality** associated to **Quality of Bathymetric Data**.
- For the geometry associated with **Obstruction**, **Sounding**, **Underwater/Awash Rock** and **Wreck** features, an instance of **Spatial Quality** using the association **Spatial Association** (see clause 25.10) may be associated to indicate, where required, that the horizontal position and/or the vertical uncertainty for the associated feature is of different (higher or lower) accuracy than indicated by

the underlying **Quality of Bathymetric Data** Meta feature. Where **Spatial Quality** is associated to **Obstruction, Underwater/Awash Rock** or **Wreck** and attribute **height** or **value of sounding** is populated with an empty (null) value, the value for the attribute **vertical uncertainty (uncertainty fixed)** on the associated **Spatial Quality**, where required, must also be populated as empty (null). See also clause 3.8.1.3(Sounding uncertainty).

The attribute **quality of horizontal measurement** may be used on **Spatial Quality** to provide an indication of lower accuracy quality of depth features, in addition to population of **horizontal position accuracy**, than the underlying **Quality of Bathymetric Data** indicates, however where this is done the **Spatial Quality** feature must not be associated to a **Quality of Bathymetric Data** feature.

Distinction: Quality of Bathymetric Data; Quality of Non-Bathymetric Data; Quality of Survey.

Inland specific Encoding Instructions:

---

## 24.6 Time Schedule - In General

|                                                                                                        |                     |                                                                                                                                                                                                                                                                                                               |             |                                                                                                                         |

### Feature Associations

| S-401 Role      | Association Type                          | Associated to | Type        | Multiplicity |
|-----------------|-------------------------------------------|---------------|-------------|--------------|
| The Information | Additional Information (see clause 25.1). | See next row  | Association | 0,*          |

**Associated to:** Anchor Berth, Anchorage Area, Berth, Bunker Station, Checkpoint, Coast Guard Station, Dry Dock, Exceptional Navigation Structure, Ferry Route, Floating Dock, Gate, Lock Basin, Lock Basin Part, Mooring Area, Refuse Dump, Seaplane Landing Area, Small Craft Facility, Span Opening, Terminal, Vehicle Transfer,

### Inland specific encoding instructions:

- A) Encoded without dedicated spatial reference. Always associated with respective feature (see below).
- B) Operating hours should be included in at least all movable bridges and all locks, even if these are operated 24 hours a day 7 days a week all year round.
- C) Operating hours should preferably be added for all other features that have limited operating/availability hours (Offices of waterway authorities, harbor masters, police, etc. / bunker services, fresh water supplies, refuse dumps, etc. / terminals, berths, pontoons, etc.)
- D) Detailed schedule information is contained in external file. The attribute **time schedule reference** (schref) contains the respective reference.

- E) If there are different time schedules for different ship types or usages of ships, or there are different categories of time and behavior, several **Time Schedule – In General** (tisdge) features must be used.
- F) Information about average passing times is encoded in an additional external file. The file name is encoded in the **average passing time reference** (aptref) attribute
- G) Operating times have to be encoded in local time.
- H) EUR: Time schedules must be encoded, however if the same time schedule applies to all kinds of vessels the reference to the external XML file can be encoded in the **file reference** (TXTDSC) attribute of the feature itself. It is not necessary to encode the **Time Schedule – In General** (tisdge) feature in this case. Alternatively or additionally the features Service Hours and Non Standard Working Days can be encoded and associated.

## 25 Association Names

The following diagrams are examples to demonstrate the structure of the feature/feature and feature/information association tables included in the following clauses, as they may be correspondingly represented in UML. The examples are taken from the UML Relationship Diagram for the feature **Two Way Route Part**. The complete relationship diagram is shown in Figure 25-1 below.

Figure 25-1 – Two-Way Route Part UML relationship diagram

NOTE: The association **Spatial Association** (see clause 25.10) is not included in Figure 25-1 above, as this association identifies the relationship between an information type (**Spatial Quality**) and the spatial type to which a feature is bound (that is, the geometry to which the feature is bound, rather than the feature itself).

The tables included in this Section are structured such that each row of the table shows all components of the relationship as they would be included at the association end for the entries included in the “Associated With” column. For example, for the **Two Way Route** end of the **Two-Way Route Aggregation** association (indicated by the red outline included in Figure 25-1 above), the “Role Type” is *Aggregation*; the “Role” is *The Collection*; and the “Multiplicity” is *0,1* (see clause 25.19):

| Role Type   | Role           | Associated With      | Multiplicity |
|-------------|----------------|----------------------|--------------|
| Aggregation | The Collection | <b>Two-Way Route</b> | 0,1          |

Within the tables included in this Section, features are grouped in separate table entries where the features included at either end of the relationship may differ for the association. For example Figure 25-2\* below shows that, for the feature/information association **Additional Information**, the feature **Anchor Berth** may be associated with any of the information types **Contact Details**, **Non-Standard Working Day**, **Service Hours** or **Nautical Information**; while the feature **Two Way Route Part** may only be associated with the information type **Nautical Information** (as shown in Figure 25-1 above and Figure 25-5).

\* Figure 25-2 is derived from clause 25.1.

**IHO Definition: ADDITIONAL INFORMATION.** A feature association for the binding between at least one instance of a geo feature and an instance of an information type.

**Remarks:**

- The features comprising an **Additional Information** association must, if required, include at least one of any of the geo features included in the following lists associated to one or more of the corresponding information types included in the “The Information” role.

| Role Type   | Role        | Associated With                                                                                                 | Multiplicity |
|-------------|-------------|-----------------------------------------------------------------------------------------------------------------|--------------|
| Association | Information | <b>Contact Details, Non-Standard Working Day, Service Hours, Nautical Information, Time Schedule In General</b> | 0,1          |
|             |             | <b>Airport/Airfield, Anchor Berth, Anchorage Area, ...</b>                                                      | 0,*          |
| Role Type   | Role        | Associated With                                                                                                 | Multiplicity |
| Association | Information | <b>Contact Details, Nautical Information</b>                                                                    | 0,1          |
|             |             | <b>Administration Area, ..., Wind Turbine</b>                                                                   | 0,*          |
| Role Type   | Role        | Associated With                                                                                                 | Multiplicity |
| Association | Information | <b>Nautical Information</b>                                                                                     | 0,1          |
|             |             | <b>..., Two-Way Route, Two-Way Route Part, Underwater/Awash Rock, ...</b>                                       | 0,*          |

*Figure 25-2 – Example of different allowable Additional Information associations*

Figure 25-3 below shows the representation of the feature/feature association **Two Way Route Aggregation** for the **Two-Way Route Part** feature (see clause 25.15).

**IHO Definition: TWO-WAY-ROUTE AGGREGATION.** A feature association for the binding between a two-way route and its component features.

**Remarks:**

- A **Two-Way Route Aggregation** must, if required, include at least one **Two-Way Route Part** feature associated to a **Two-Way Route** feature.
- The **Two-Way Route** may additionally be associated to the aids to navigation marking the components of the Route using the association **Aids to Navigation Association** (see clause 25.2).

| Role Type   | Role Type      | Role Type                 | Role Type |
|-------------|----------------|---------------------------|-----------|
| Aggregation | The Collection | <b>Two-Way Route</b>      | 0,1       |
| Association | The Component  | <b>Two-Way Route Part</b> | 1,*       |

**Figure 25-3 – Two-Way Route Aggregation**

In Figure 25-3 above, the table should be interpreted as follows:

- A **Two-Way Route** instance, if it exists, *aggregates* (or is the container for) *the collection* of one or more **Two-Way Route Part** features.
- A **Two-Way Route Part** instance is *the component* (or is a containee) of a **Two-Way Route** feature, if the **Two-Way Route Aggregation** association is created.
- The *1,\** multiplicity at the **Two-Way Route Part** end of the relationship indicates that, where a **Two-Way Route Aggregation** exists, there must be to at least one **Two-Way Route Part** feature included in the **Two-Way Route Aggregation**. **NOTE:** This does not mean that all encoded instances of **Two-Way Route Part** must be included in a **Two-Way Route Aggregation** (see next bullet).
- The *0,1* multiplicity at the **Two-Way Route** end of the relationship indicates that there is no requirement to bind each **Two-Way Route Part** feature to an instance of **Two-Way Route** using a **Two-Way Route Aggregation** (due to the lower multiplicity being zero). However, where the relationship exists, there must be exactly one **Two-Way Route** feature included in the association.

Figure 25-4 below shows the representation of the feature/feature association **Traffic Separation Scheme Aggregation** for the **Two-Way Route Part** feature (see clause 25.14).

IHO Definition: **TRAFFIC SPARATION SCHEME AGGREGATION**. A feature association for the binding between a Traffic Separation Scheme or a Traffic Separation Scheme System and its component features.

**Remarks:**

- A **Traffic Separation Scheme Aggregation** must, if required, include at least one of any of the features shown in the “The Component” role below in upright text associated to a **Traffic Separation Scheme** feature.
- The **Traffic Separation Scheme** may additionally be associated to the aids to navigation marking the components of the Scheme using the association **Aids to Navigation Association** (see clause 25.2).

| Role Type   | Role           | Associated With                                                                                                                                                                                                                                                                             | Multiplicity |
|-------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Traffic Separation Scheme</b>                                                                                                                                                                                                                                                            | 0,1          |
| Association | The Component  | <b>Inshore Traffic Zone, Landmark, Pile, Precautionary Area, <i>Restricted Area</i>, Separation Zone or Line, Traffic Separation Scheme, Traffic Separation Scheme Boundary, Traffic Separation Scheme Crossing, Traffic Separation Scheme Lane Part, Two-Way Route, Two-Way Route Part</b> | 0,*          |

**Figure 25-4 – Traffic Separation Scheme Aggregation**

The components of the feature/feature association **Traffic Separation Scheme Aggregation** should be interpreted as for the corresponding components of the feature/feature association **Two-Way Route Aggregation** described for Figure 25-3, except for the multiplicity at the **Two-Way Route Part** end of the association (indicated with the arrow in Figure 25-4). The multiplicity as indicated in the UML as “0..\* {1..\* [C]}” in this case is an example of “collective multiplicity” notation. Collective multiplicities are described in the following clauses in the Remarks section of the tables.

- A collective multiplicity can only exist when there is more than one feature type that may be used in a given role. A collective multiplicity indicates the multiplicity of the collection.
- The “0..\*” component of the multiplicity shown in the UML in this example is the “individual multiplicity”. An individual multiplicity indicates the multiplicity for each component of the collection, and in this example indicates that that none of the listed features are required to be included.
- The collective component of the multiplicity ({1..\* [C]} in the UML) indicates that where the association **Traffic Separation Scheme Aggregation** exists, there must be at least one of any of the features (collectively) that may be included as “containees”. The allowable list of features is included in the following table entries, noting in this example that at least one instance of **Two-Way Route Part** is allowable, if required, for the **Traffic Separation Scheme Aggregation** (as highlighted in Figure 25-4).
- The individual component of the multiplicity (0,\*) indicates there is no requirement for a **Two-Way Route Part** feature (or any other feature in the list) to be included in a **Traffic Separation Scheme Aggregation** (due to the lower multiplicity being zero). However where the relationship exists, there may be an unlimited number of **Two-Way Route Part** features or any other feature included in the list (due to the upper multiplicity being “\*”).
- Upright style (non-italicized) features in the tables are members of the collective multiplicity, italicized features are not. The individual multiplicity applies to all listed features; the collective multiplicity only applies to the upright features, which may or may not comprise the entire list.

The Tables in this Section show only the individual multiplicity in the “Multiplicity” column. The indication of collective multiplicity is included in the Remarks (in Figure 25-4 above, the Remark “A **Traffic Separation Scheme Aggregation** must, if required, include at least one of any of the features shown in the “The Component” role below in upright text associated to a **Traffic Separation Scheme** feature” indicates the collective multiplicity).

Figure 25-5 below shows the representation of the feature/information association **Additional Information** for the **Two-Way Route Part** feature (table derived from clause 25.1).

**IHO Definition: ADDITIONAL INFORMATION.** A feature association for the binding between at least one instance of a geo feature and an instance of an information type.

**Remarks:**

- The features comprising an **Additional Information** association must, if required, include at least one of any of the geo features included in the following list associated to one or more of the corresponding information types included in the “The Information” role.

| Role Type   | Role            | Associated With                                                                                                                       | Multiplicity |
|-------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Association | The information | <b>Nautical Information</b>                                                                                                           | 0,1          |
|             |                 | ..., <b>Two-Way Route, Two-Way Route Part, Underwater/Awash Rock, Unsurveyed Area, Vegetation, Water Turbulence, Weed/Kelp, Wreck</b> | 0,*          |

**Figure 25-5 – Additional Information**

The only additional characteristic to note in Figure 25-5, which is characteristic of all feature/information associations, is that unlike feature/feature associations, feature/information associations have only one role (at the information feature end of the relationship).

Within the feature tables included in Sections 3 to 24 of this document, a description of the associations as relevant to each individual feature has also been included. Figure 25-6 below shows an example as included for the feature **Lateral Buoy** (see clause 20.1); and guidance as to how to interpret these tables.

| Feature Associations      |                                                         |                                                                                                                                                                       |                     |                             |

**Figure 25-6 – Example of associations applicable to individual features – Lateral Buoy**

Each row included in Figure 25-6 above describes a S-401 association instance that may be created and include one or more instances of the feature type **Lateral Buoy** as a member; and is structured such that all components of the association are grouped as they would appear at the end of the association containing **Lateral Buoy** (see Figure 25-1 and associated guidance).

- (1) The name of the association as specified in the following clauses.
- (2) The list of features that **Lateral Buoy** may be associated to for the association (in UML terms, the list of features at the “other end” of the association).
- (3) The type of association as defined for the **Lateral Buoy** end of the association – “Association”, “Aggregation” or “Composition” as described in S-100 Part 1, clause 1-4.9; and included in the tables in this Section in the “Role Type” column. NOTE: The association type for a feature/information association will always be “Association”.
- (4) The role name as defined for the **Lateral Buoy** end of the association and as described in Section 26; and included in the tables in this Section in the “Role” column. NOTE: a dash “-” in this column indicates the one-way nature of a feature/information association – the role name is included at the information end of the association only.
- (5) The multiplicity as defined for the **Lateral Buoy** end of the association and included in the tables in this Section in the “Multiplicity” column. For **Lateral Buoy**, these multiplicities are interpreted as follows:
  - 0,1 for the **Structure/Equipment** association means that a **Lateral Buoy** can exist in isolation (lower multiplicity 0) but, if the association exists, exactly one instance of **Lateral Buoy** must be included in the “The Structure” role of type Composition. The same principle applies for the **Text Association** association.
  - 0,\* means that a **Lateral Buoy** can exist in isolation (lower multiplicity 0) but, if the association exists, one or more instances of **Lateral Buoy** may (but are not required) to be included in the association. In general this is an indication of “collective multiplicity” (see Figure 15-4 above and associated guidance).

## 25.1 Additional information

**IHO Definition: ADDITIONAL INFORMATION.** A feature association for the binding between at least one instance of a geo feature and an instance of an information type.

**Remarks:**

- The features comprising an **Additional Information** association must, if required, include at least one of any of the geo features included in the following lists associated to one or more of the corresponding information types included in the “The Information” role.

| Role Type   | Role            | Associated With                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Multiplicity |
|-------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Association | The Information | Contact Details, Non-Standard Working Day, Service Hours, Nautical Information, Time Schedule In General                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 0,1          |

## 25.2 Aids to navigation association

**IHO Definition: AIDS TO NAVIGATION ASSOCIATION.** A feature association for the binding between navigational aids and the traffic systems (such as routeing measures) that they define.

**Remarks:**

- The features comprising an **Aids to Navigation Association** must, if required, include at least one of any of the features included in the “The Component” role associated to one or more of the corresponding features in the “The Collection” role.

| Aggregation | The Collection | Fairway System, Traffic Separation Scheme, Two-Way Route                                                                                                                                                                                                                                                                                           | 0,1          |
| Association | The Component  | Bridge, Conveyor, Floating Dock, Hulk, Pipeline Overhead, Pontoon, Pylon/Bridge Support, Shoreline Construction, Span Fixed, Span Opening, Structure Over Navigable Water                                                                                                                                                                          | 0,*          |

## 25.3 Bridge aggregation

**IHO Definition: BRIDGE AGGREGATION.** A feature association for the binding between a bridge and its component features.

**Remarks:**

- The features comprising a **Bridge Aggregation** must, if required, include at least one **Span Fixed** or **Span Opening** feature associated to a **Bridge** feature.
- A bridge over non-navigable water at the optimum display scale of the IENC data, which does not require its individual components to be encoded, must be encoded, where required, as a **Bridge** feature of type curve or surface (see clause 6.6).

| Role Type   | Role           | Associated With | Multiplicity |
|-------------|----------------|-----------------|--------------|
| Aggregation | The Collection | Bridge          | 0,1          |

|             |               |                                                                                                                                                                                                                                                                                                       |     |
|-------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Association | The Component | <b>Cable Overhead, Communication Area, Lateral Buoy, Notice Mark, Pipeline Overhead, Pontoon, Pylon/Bridge Support, Radar Reflector, Radio Calling-In Point, Shoreline Construction, Signal Station Traffic, Signal Station Warning, Span Fixed, Span Opening, Two Way Route Part, Waterway Gauge</b> | 0,* |
|-------------|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## 25.4 Caution area association

**IHO Definition: CAUTION AREA ASSOCIATION.** A feature association for the binding between a caution area and the traffic systems (such as routeing measures) to which the cautionary information applies.

**Remarks:**

- A **Caution Area Association** must, if required, include at least one **Traffic Separation Scheme** feature associated to a **Caution Area** feature.

| Role Type   | Role           | Associated With                  | Multiplicity |
|-------------|----------------|----------------------------------|--------------|
| Aggregation | The Collection | <b>Caution Area</b>              | 0,1          |
| Association | The Component  | <b>Traffic Separation Scheme</b> | 0,*          |

## 25.5 Fairway aggregation

**IHO Definition: FAIRWAY AGGREGATION.** A feature association for the binding between related fairways comprising a fairway system.

**Remarks:**

- A **Fairway Aggregation** must, if required, include at least two **Fairway** features associated to a **Fairway System** feature. Note, however, that within a single dataset the **Fairway Aggregation** may contain only a single **Fairway** feature due to splitting the fairway system at the IENC cell limits.
- The **Fairway System** may additionally be associated to the aids to navigation marking the components of the fairway using the association **Aids to Navigation Association** (see clause 25.2).

| Role Type   | Role           | Associated With       | Multiplicity |
|-------------|----------------|-----------------------|--------------|
| Aggregation | The Collection | <b>Fairway System</b> | 0,1          |
| Association | The Component  | <b>Fairway</b>        | 0,*          |

## 25.6 Fairway auxiliary

**IHO Definition: FAIRWAY AUXILIARY.** A feature association for the binding between a fairway and related features auxiliary to the fairway.

**Remarks:**

- The features comprising a **Fairway Auxiliary** association must include, if required, at least one of any of the features included in the “The Auxiliary Feature” role associated to one **Fairway** feature.

| Role Type   | Role                  | Associated With                                                                                                                                                                                                                                                                                                                                          | Multiplicity |
|-------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Primary Feature   | <b>Fairway</b>                                                                                                                                                                                                                                                                                                                                           | 0,1          |
| Association | The Auxiliary Feature | <b>Cardinal Beacon, Cardinal Buoy, Caution Area, Daymark, Dredged Area, Isolated Danger Beacon, Isolated Danger Buoy, Lateral Beacon, Lateral Buoy, Landmark, Notice Mark, Pile, Recommended Route Centreline, Recommended Track, Restricted Area, Safe Water Beacon, Safe Water Buoy, Special Purpose/General Beacon, Special Purpose/General Buoy,</b> | 0,*          |

## 25.7 Mooring trot aggregation

**IHO Definition: MOORING TROT AGGREGATION.** A feature association for the binding between a mooring trot and its component parts.

**Remarks:**

- Typically, a mooring trot will consist of:
  - o At least one **Berth** feature;
  - o At least 2 **Cable Submarine** features;
  - o At least 2 **Mooring Buoy** features; and
  - o At least 2 **Obstruction** features.

A **Mooring Trot Aggregation** must, if required, include at least one of any of the features shown in the “The Component” role below associated to a **Mooring Trot** feature.

| Role Type   | Role           | Associated With                                          | Multiplicity |
|-------------|----------------|----------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Mooring Trot</b>                                      | 0,1          |
| Association | The Component  | <b>Berth, Cable Submarine, Mooring Buoy, Obstruction</b> | 0,*          |

## 25.8 Pilotage district association

**IHO Definition: PILOTAGE DISTRICT ASSOCIATION.** A feature association for the binding between a pilotage district and its component pilot boarding places.

**Remarks:**

- A **Pilotage District Association** must, if required, include at least one **Pilot Boarding Place** feature associated to a **Pilotage District** feature.

| Role Type   | Role           | Associated With          | Multiplicity |
|-------------|----------------|--------------------------|--------------|
| Aggregation | The Collection | <b>Pilotage District</b> | 0,1          |

|             |               |                      |     |
|-------------|---------------|----------------------|-----|
| Association | The Component | Pilot Boarding Place | 0,* |
|-------------|---------------|----------------------|-----|

## 25.9 Quality of bathymetric data composition

**IHO Definition: QUALITY OF BATHYMETRIC DATA COMPOSITION.** The mandatory association between the quality-related characteristics of bathymetric data and the horizontal position and vertical uncertainties of the data.

**Remarks:**

- A **Quality of Bathymetric Data Composition** must, if required, include at least one **Quality of Bathymetric Data** feature associated to a **Spatial Quality** feature.

| Role Type   | Role                    | Associated With                    | Multiplicity |
|-------------|-------------------------|------------------------------------|--------------|
| Association | The Quality Information | <b>Spatial Quality</b>             | 0,1          |
|             |                         | <b>Quality of Bathymetric Data</b> | 0,*          |

## 25.10 Roofed Structure Aggregation

**IHO Definition: ROOFED STRUCTURE AGGREGATION.** A feature association for the binding between a roofed structure over navigable water and its supporting features.

**Remarks:**

- A **Roofed Structure Aggregation** must, if required, include at least one **Pylon/Bridge Support** feature associated to a **Structure Over Navigable Water** feature.

| Role Type   | Role                 | Associated With                       | Multiplicity |
|-------------|----------------------|---------------------------------------|--------------|
| Aggregation | The Roofed Structure | <b>Structure Over Navigable Water</b> | 0,1          |
| Association | The Support          | <b>Pylon/Bridge Support</b>           | 0,*          |

## 25.11 Spatial association

**IHO Definition: SPATIAL ASSOCIATION.** An association for the binding between a spatial type and its spatial quality information.

**Remarks:**

- A **Spatial Association** must, if required, include at least one spatial type instance associated to a **Spatial Quality** information feature. Note that where multiple features are associated with a spatial type instance, the spatial quality applies to all these features.
- For geometric primitive surface, the **Spatial Quality** must, if required, be associated to the relevant curves comprising the spatial edges (boundaries) of the surface.

| Role Type   | Role                    | Associated With        | Multiplicity |
|-------------|-------------------------|------------------------|--------------|
| Association | The Quality Information | <b>Spatial Quality</b> | 0,1          |

|  |  |                                  |     |
|--|--|----------------------------------|-----|
|  |  | Spatial types (see clause 2.4.7) | 0,* |
|--|--|----------------------------------|-----|

## 25.12 Structure/equipment

**IHO Definition: STRUCTURE/EQUIPMENT.** A feature association for the binding between a navigation aid equipment feature and the structure that supports it.

**Remarks:**

- The features comprising an **Structure/Equipment** association must, if required, include at least one of any of the features included in the “The Equipment” role associated to exactly one of the corresponding features in the “The Structure” role.

| Role Type   | Role          | Associated With                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Multiplicity |
|-------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Composition | The Structure | Bridge, Building, Crane, Cardinal Beacon, Cardinal Buoy, Conveyor, Dolphin, Emergency Wreck Marking Buoy, Exceptional Navigation Structure, Fishing Facility, Floating Dock, Fortified Structure, Hulk, Installation Buoy, Isolated Danger Beacon, Isolated Danger Buoy, Landmark, Lateral Beacon, Lateral Buoy, Mooring Buoy, Offshore Platform, Pile, Pontoon, Pylon/Bridge Support, Safe Water Beacon, Safe Water Buoy, Shoreline Construction, Silo/Tank, Span Fixed, Span Opening, Special Purpose/General Beacon, Special Purpose/General Buoy, Structure Over Navigable Water, Wind Turbine, Wreck | 0,1          |
| Association | The Equipment | Daymark, Distance Mark, Fog Signal, Light All Around, Notice Mark, Physical AIS Aid to Navigation, Radar Transponder Beacon, Signal Station Traffic, Signal Station Warning                                                                                                                                                                                                                                                                                                                                                                                                                               | 0,*          |
| Role Type   | Role          | Associated With                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Multiplicity |
| Composition | The Structure | Bridge, Building, Crane, Cardinal Beacon, Conveyor, Dolphin, Fishing Facility, Fortified Structure, Isolated Danger Beacon, Landmark, Lateral Beacon, Offshore Platform, Pile, Pipeline Overhead, Pylon/Bridge Support, Safe Water Beacon, Shoreline Construction, Silo/Tank, Span Fixed, Span Opening, Special Purpose/General Beacon, Structure Over Navigable Water, Wind Turbine, Wreck                                                                                                                                                                                                               | 0,1          |

### 25.13 Text association

**IHO Definition: TEXT ASSOCIATION.** A feature association for the binding between a geo feature and the cartographically positioned location for text.

**Remarks:**

- The features comprising a **Text Association** must, if required, include exactly one of any of the features included in the “The Position Provider” role associated to up to two **Text Placement** features, which cannot exist outside **Text Association**.

## 25.14 Traffic Separation Scheme aggregation

**IHO Definition:** **TRAFFIC SEPARATION SCHEME AGGREGATION.** A feature association for the binding between a Traffic Separation Scheme or a Traffic Separation Scheme System and its component features.

**Remarks:**

A **Traffic Separation Scheme Aggregation** must, if required, include one of any of the features shown in the “The Component” role below in upright text associated to a **Traffic Separation Scheme** feature.

- The **Traffic Separation Scheme** may additionally be associated to the aids to navigation marking the components of the Scheme using the association **Aids to Navigation Association** (see clause 25.2).

| Role Type   | Role           | Associated With                                                                                                                                                                                                                                                             | Multiplicity |
|-------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Traffic Separation Scheme</b>                                                                                                                                                                                                                                            | 0,1          |
| Association | The Component  | <b>Inshore Traffic Zone, Precautionary Area, <i>Restricted Area</i>, Separation Zone or Line, Traffic Separation Scheme, Traffic Separation Scheme Boundary, Traffic Separation Scheme Crossing, Traffic Separation Scheme Lane Part, Two-Way Route, Two-Way Route Part</b> | 0,*          |

### 25.15 Two-way route aggregation

**IHO Definition: TWO-WAY ROUTE AGGREGATION.** A feature association for the binding between a two-way route and its component features.

**Remarks:**

- A **Two-Way Route Aggregation** must, if required, include at least one **Two-Way Route Part** feature associated to a **Two-Way Route** feature.
- The **Two-Way Route** may additionally be associated to the aids to navigation marking the components of the Route using the association **Aids to Navigation Association** (see clause 25.2).

| Role Type   | Role           | Associated With           | Multiplicity |
|-------------|----------------|---------------------------|--------------|
| Aggregation | The Collection | <b>Two-Way Route</b>      | 0,1          |
| Association | The Component  | <b>Two-Way Route Part</b> | 0,*          |

### 25.16 Update aggregation

**IHO Definition: UPDATE AGGREGATION.** A feature association for the binding between an Update Information feature and its component Update Information features.

**Remarks:**

- An **Update Aggregation** must, if required, include at least two **Update Information** features associated to an **Update Information** feature having attribute **update type** = 3 (modify). See clause 3.12.

| Role Type   | Role           | Associated With           | Multiplicity |
|-------------|----------------|---------------------------|--------------|
| Aggregation | The Collection | <b>Update Information</b> | 0,1          |
| Association | The Component  | <b>Update Information</b> | 0,*          |

## 25.17 Updated information

**IHO Definition:** **UPDATED INFORMATION.** A feature association for the binding between an update information metadata feature and updated feature(s) that it identifies.

**Remarks:**

- An **Updated Information** association must, if required, include at least one of any of the features shown in the “The Updated Object” role below associated to an **Update Information** feature.

| Role Type   | Role               | Associated With                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Multiplicity |

## 25.18 Anchorage or berth aggregation

**IHO Definition: ANCHORAGE OR BERTH AGGREGATION.** A feature association for the binding between an anchorage area, anchor berth or berth and the related features, e.g. notice marks, mooring facilities and bollards.

**Remarks:**

- If an Anchor Berth, Berth or Mooring Area is used as the Collection, it cannot be the the Component at the same time.

| Role Type   | Role           | Associated With                                                                                                                                                                                          | Multiplicity |

| Association | The Component  | <b>Anchor Berth, Berth, Bollard, Bunker Station, Communication Area, Mooring Area, Mooring Buoy, Notice Mark, Pile, Refuse Dump, Restricted Area, Shoreline Construction, Terminal, Vehicle Transfer</b> | 1,*          |

## 25.19 Barrage association

**IHO Definition: BARRAGE ASSOCIATION.** A feature association for the binding between a barrage and its elements.

**Remarks:**

- .

| Role Type   | Role           | Associated With                                                                                                                                                                                                                                                                                                              | Multiplicity |
|-------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Dam</b>                                                                                                                                                                                                                                                                                                                   | 1,1          |
| Association | The Component  | <b>Cable Overhead, Cardinal Buoy, Communication Area, Gate, Lateral Buoy, Lock Basin, Lock Basin Part, Notice Mark, Pipeline Overhead, Radio Calling-In Point, Restricted Area, Shoreline Construction, Signal Station Traffic, Signal Station Warning, Special Purpose/General Buoy, Two Way Route Part, Waterway Gauge</b> | 1,*          |

## 25.20 Bridge arch association

**IHO Definition: BRIDGE ARCH ASSOCIATION.** A feature association for the binding between the individual **Span Fixed** features of a bridge arch.

**Remarks:**

- A **Bridge Arch Association** must include at least two **Span Fixed** features.
- If a bridge consists of several bridge arches a **Bridge Arch Association** has to be created for each of the arches.
- All the elements of a bridge have to be associated by a **Bridge Aggregation**.

| Role Type | Role | Associated With | Multiplicity |
|-----------|------|-----------------|--------------|
|-----------|------|-----------------|--------------|

|             |                |                   |     |
|-------------|----------------|-------------------|-----|
| Aggregation | The Collection | <b>Span Fixed</b> | 1,1 |
| Association | The Component  | <b>Span Fixed</b> | 1,* |

### 25.21 Depth and clearance indicator association

**IHO Definition: DEPTH AND CLEARANCE INDICATOR ASSOCIATION.** A feature association for the binding between a Waterway Gauge and the related depth indicators or vertical clearance indicators or between several indicators.

**Remarks:**

- .

| Role Type   | Role           | Associated With                               | Multiplicity |
|-------------|----------------|-----------------------------------------------|--------------|
| Aggregation | The Collection | <b>Signal Station Warning, Waterway Gauge</b> | 1,1          |
| Association | The Component  | <b>Signal Station Warning</b>                 | 1,*          |

### 25.22 Exceptional Navigation Structure aggregation

**IHO Definition: EXCEPTIONAL NAVIGATION STRUCTURE AGGREGATION.** A feature association for the binding between the exceptional navigation structure itself and the gates, signal stations, waiting berths and other features.

| Role Type   | Role           | Associated With                                                                                                                                                                                      | Multiplicity |
|-------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Exceptional navigation structure</b>                                                                                                                                                              | 1,*          |
| Association | The Component  | <b>Berth, Bollard, Communication Area, Dam, Depth Area, Gate, Lock Basin, Lock Basin Part, Notice Marks, Signal Station Traffic, Signal Station Warning, Shoreline Construction, Waterway Gauge,</b> | 1,*          |

### 25.23 Lock aggregation

**IHO Definition: LOCK AGGREGATION.** A feature association for the binding between the lock and the lock basins, lock basin parts, lock gates, signal stations, waiting berths and other features.

| Role Type   | Role           | Associated With   | Multiplicity |
|-------------|----------------|-------------------|--------------|
| Aggregation | The Collection | <b>Lock Basin</b> | 1,*          |

|             |               |                                                                                                                                                                                                                                                                                                                                                                  |     |
|-------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Association | The Component | Berth, Bridge, Bollard, Cable Overhead, Cardinal Buoy, Communication Area, Dam, Gate, Lock Basin, Lock Basin Part, Notice Marks, Pipeline Overhead, Radio Calling-In Point, Restricted Area, Signal Station Traffic, Signal Station Warning, Shoreline Construction, Span Fixed, Span Opening, Special Purpose/General Buoy, Two-Way Route Part, Waterway Gauge, | 1,* |
|-------------|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## 25.24 Notice mark aggregation

**IHO Definition: NOTICE MARK AGGREGATION.** A feature association for the binding between notice marks and the features that they define.

**Remarks:**

- The features comprising a **Notice Mark Aggregation** must, if required, include at least one of any of the features included in the “The Component” role associated to one or more of the corresponding features in the “The Collection” role.
- In this case the name of the association is not pointing to the container, but to the containee. This allows to use one association for different types of infrastructure elements.

| Role Type   | Role           | Associated With                                                                                                                                                  | Multiplicity |
|-------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | Caution Area, Communication Area, Pylon/Bridge Support, Radio Calling-In Point, Restricted Area, Structure over Navigable Water, Turning Basin, Vehicle Transfer | 1,*          |
| Association | The Component  | Notice Mark                                                                                                                                                      | 1,*          |

## 25.25 Overhead cable aggregation

**IHO Definition: OVERHEAD CABLE AGGREGATION.** A feature association for the binding between a cable overhead and the associated pylons, notice marks, waterway gauges.

| Role Type   | Role           | Associated With                                                                            | Multiplicity |
|-------------|----------------|--------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | Cable Overhead                                                                             | 1,*          |
| Association | The Component  | Notice Mark, Pylon/Bridge Support, Radar Refelctor, Shoreline Construction, Waterway Gauge | 1,*          |

## 25.26 Overhead pipeline aggregation

**IHO Definition: OVERHEAD PIPELINE AGGREGATION.** A feature association for the binding between a pipeline overhead and the associated pylons, notice marks, waterway gauges.

| Role Type | Role | Associated With | Multiplicity |
|-----------|------|-----------------|--------------|
|-----------|------|-----------------|--------------|

|             |                |                                                                                                   |     |
|-------------|----------------|---------------------------------------------------------------------------------------------------|-----|
| Aggregation | The Collection | <b>Pipeline Overhead</b>                                                                          | 1,* |
| Association | The Component  | <b>Notice Mark, Pylon/Bridge Support, Radar Refelctor, Shoreline Construction, Waterway Gauge</b> | 1,* |

## 25.27 Signal station aggregation

**IHO Definition: SIGNAL STATION AGGREGATION.** A feature association for the binding between traffic and warning signal stations and the features to which they are related.

**Remarks:**

- The features comprising a **Signal Station Aggregation** must, if required, include at least one of any of the features included in the “The Component” role associated to one or more of the corresponding features in the “The Collection” role.
- In this case the name of the association is not pointing to the container, but to the containee. This allows to use one association for different types of infrastructure elements.

| Role Type   | Role           | Associated With                                       | Multiplicity |
|-------------|----------------|-------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Bunker Station, Harbour Basin, Terminal</b>        | 1,*          |
| Association | The Component  | <b>Signal Station Traffic, Signal Station Warning</b> | 1,*          |

## 25.28 Tunnel aggregation

**IHO Definition: TUNNEL AGGREGATION.** A feature association for the binding between a tunnel with a waterway in it and the associated objects, e.g. Communication Area, Notice Mark, Restricted Area, fender, Vertical clearance indicator, depth indicator, traffic signal station, warning signal station, radio calling-in point, overhead cable, overhead pipeline, waterway gauge.

**Remarks:**

- .

| Role Type   | Role           | Associated With                                                                                                                                                                                                                | Multiplicity |
|-------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Aggregation | The Collection | <b>Tunnel</b>                                                                                                                                                                                                                  | 1,*          |
| Association | The Component  | <b>Cable Overhead, Communication Area, Notice Mark, Pipeline Overhead, Radio Calling-In Point, Restricted Area, Shoreline Construction, Signal Station Traffic, Signal Station Warning, Two-Way Route Part, Waterway Gauge</b> | 1,*          |

## 26 Association Roles

### 26.1 The auxiliary feature

IHO Definition: **THE AUXILIARY FEATURE.** A pointer to a feature to which incidental, secondary or supplementary features are related to the referenced feature.

### 26.2 The cartographic text

IHO Definition: **THE CARTOGRAPHIC TEXT.** A pointer to a specific cartographically positioned location for text.

### 26.3 The collection

IHO Definition: **THE COLLECTION.** A pointer to the aggregate in a whole-part relationship.

### 26.4 The component

IHO Definition: **THE COMPONENT.** A pointer to a part in a whole-part relationship.

### 26.5 The equipment

IHO Definition: **THE EQUIPMENT.** A pointer to the feature(s) supported by a structure feature.

### 26.6 The information

IHO Definition: **THE INFORMATION.** A pointer to incidental, secondary or supplementary features related to an object that provides more information about the referencedreferencing feature or information type.

### 26.7 The position provider

IHO Definition: **THE POSITION PROVIDER.** A pointer to a specific feature(s).

### 26.8 The primary feature

IHO Definition: **THE PRIMARY FEATURE.** A pointer to the equipment a feature(s) supported by a structure feature to which incidental, secondary or supplementary features are related.

### 26.9 The quality information

IHO Definition: **THE QUALITY INFORMATION.** A pointer to a feature that describes changes made to a datasetan information type providing spatial quality information.

## 26.10 The roofed structure

IHO Definition: **THE ROOFED STRUCTURE.** A pointer to a supported roofed structure.

## 26.11 The structure

IHO Definition: **THE STRUCTURE.** A pointer to the feature that equipment feature(s) are supported by.

## 26.12 The support

IHO Definition: **THE SUPPORT.** A pointer to the feature(s) that support a structure.

## 26.13 The update

IHO Definition: **THE UPDATE.** A pointer to a feature that describes changes made to a dataset.

## 26.14 The updated object

IHO Definition: **THE UPDATED OBJECT.** A pointer to a feature that has been updated.

## 27 Geo Feature Attribute and Enumerate Descriptions

### 27.1 additional mark (addmrk)

IHO Definition: Shape and position of an additional board on a notice mark.

#### 1) Top (Board)

IHO Definition: A rectangular board at the top of the main sign.

#### 2) Bottom (Board)

IHO Definition: A rectangular board at the bottom of the main sign.

#### 3) Right (Triangle to the Right)

IHO Definition: A triangular board at the right side of the main sign.

#### 4) Left (Triangle to the Left)

IHO Definition: A triangular board at the left side of the main sign.

#### 5) Bottom (Triangle to the Bottom)

IHO Definition: A triangular board at the bottom of the main sign.

Remarks:

The kind and location of an additional mark at a notice mark.

### 27.2 administrative division

IHO Definition: **ADMINISTRATIVE DIVISION.** A generic term for an administrative region within a country at a level below that of the sovereign state.

Attribute Type: Text

Remarks:

- The attribute **administrative division** should contain no more than 100 characters.

### 27.3 allowed consumption (allcon)

IHO Definition: The maximum allowed power that may be used by the vessel

Attribute Type: Real

Unit: kilowatt-hour, kWh

Precision: 1kWh

Minimum value: 0

Example: **2000** for an allowed consumption of 2000 kWh

Remarks:

No remarks.

## 27.4 amount of amperage (amoamp)

IHO Definition: The maximum electric amperage possible.

Attribute Type: Real

Unit: Ampere, A

Precision: 1A

Minimum value: 0

Example: **200** for 200 A

Remarks:

No remarks.

## 27.5 assemblies of ship (excluding) (lc\_ase)

IHO Definition: Excluding list of assemblies of ships for the applicability of a feature.

### 1) All Types

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

### 2) Other

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

### 3) Single Vessel

IHO Definition: A single vessel (no assembly or **formation**).

### 5) Convoy

IHO Definition: A rigid or **towed convoy** of craft.

### 6) Formation

IHO Definition: The manner in which a convoy is assembled.

### 7) Rigid Convoy

IHO Definition: A **pushed convoy** or **breasted up formation**.

### 8) Pushed Convoy

IHO Definition: A rigid assembly of craft of which at least one is positioned in front of the craft providing the power for propelling the convoy, known as the "pusher(s)"; a convoy composed of a pusher craft and a pushed craft coupled so as to permit guided articulation is also considered as rigid.

### 9) Breasted Up Formation

IHO Definition: An assembly of craft coupled rigidly side by side, none of which is positioned in front of the craft propelling the assembly.

### 10) Towed Convoy

IHO Definition: An assembly of one or more craft, floating establishments or floating installations towed by one or more self-propelled craft forming part of the convoy.

Remarks:

No remarks.

## 27.6 assemblies of ship (including) (lc\_asi)

IHO Definition: Including list of assemblies of ships for the applicability of a feature.

### 1) All Types

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

### 2) Other

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

### 3) Single Vessel

IHO Definition: A single vessel (no assembly or **formation**).

### 5) Convoy

IHO Definition: A rigid or **towed convoy** of craft.

### 6) Formation

IHO Definition: The manner in which a convoy is assembled.

### 7) Rigid Convoy

IHO Definition: A **pushed convoy** or **breasted up formation**.

### 8) Pushed Convoy

IHO Definition: A rigid assembly of craft of which at least one is positioned in front of the craft providing the power for propelling the convoy, known as the "pusher(s)"; a convoy composed of a pusher craft and a pushed craft coupled so as to permit guided articulation is also considered as rigid.

### 9) Breasted Up Formation

IHO Definition: An assembly of craft coupled rigidly side by side, none of which is positioned in front of the craft propelling the assembly.

### 10) Towed Convoy

IHO Definition: An assembly of one or more craft, floating establishments or floating installations towed by one or more self-propelled craft forming part of the convoy.

Remarks:

No remarks.

## 27.7 average passing time reference (aptref)

IHO Definition: The string encodes the file name of an external file.

Remarks:

No remarks.

## 27.8 bank of the waterway (bnkwtw)

IHO Definition: Bank of the river (waterway).

### 1) Left

IHO Definition: Of, relating to, or located on or near the side of a person or thing that is turned toward the west when the subject is facing north (opposed to **right**).

### 2) Right

IHO Definition: Of, relating to, or located on or near the side of a person or thing that is turned toward the east when the subject is facing north (opposed to left).

Remarks:

No remarks.

## 27.9 based on fixed marks (CATTRK)

IHO Definition: **BASED ON FIXED MARKS.** A straight route (known as a recommended track, range or leading line), which comprises:

- a. at least two structures (usually beacons or daymarks) and/or natural features, which may carry lights and/or top-marks. The structures/features are positioned so that when observed to be in line, a vessel can follow a known bearing with safety. (Adapted from International Association of Lighthouse Authorities – IALA Aids to Navigation Guide, 1990); or
- b. a single structure or natural feature, which may carry lights and/or a topmark, and a specified bearing which can be followed with safety. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.72, November 2000, as amended).

Attribute Type: Boolean

Indication: A True value is an indication that the track is based on a system of one or more fixed marks.

Remarks:

No remarks.

## 27.10 beacon shape (BCNSHP)

IHO Definition: **BEACON SHAPE.** Describes the characteristic geometric form of the beacon. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Attribute Type: Enumeration

### 1) **stake, pole, perch, post**

IHO Definition: An elongated wood or metal pole, driven into the ground or seabed, which serves as a navigational aid or a support for a navigational aid. (Adapted from IHO Dictionary – S-32).

### 2) **withy**

IHO Definition: A tree without roots stuck or spoiled into the bottom of the sea to serve as a navigational aid. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.5, November 2000).

### 3) **beacon tower**

IHO Definition: A solid structure of the order of 10 metres in height used as a navigational aid. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.5, November 2000).

### 4) **lattice beacon**

IHO Definition: A structure consisting of strips of metal or wood crossed or interlaced to form a structure to serve as an aid to navigation or as a support for an aid to navigation. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.5, November 2000).

### 5) **pile beacon**

IHO Definition: A long heavy timber(s) or section(s) of steel, wood, concrete, etc., forced into the seabed to serve as an aid to navigation or as a support for an aid to navigation. (Adapted from IHO Dictionary – S-32 and Navigation Dictionary, US National Oceanic and Atmospheric Administration – NOAA, 1969).

### 6) **cairn**

IHO Definition: A mound of stones, usually conical or pyramidal, raised as a landmark or to designate a point of importance in surveying. (IHO Dictionary – S-32).

7) **buoyant beacon**

IHO Definition: A tall spar-like beacon fitted with a permanently submerged buoyancy chamber, the lower end of the body is secured to seabed sinker either by a flexible joint or by a cable under tension. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.5, November 2000).

Remarks:

No remarks.

## 27.11 bridge construction (CATBRG)

IHO Definition: **BRIDGE CONSTRUCTION.** The bridge's primary shape and/or construction material.

Attribute Type: Enumeration

1) **arch**

IHO Definition: A typically curved structural member spanning an opening and serving as a support (as for the wall or other weight above the opening). (Merriam-Webster On-line Dictionary, July 2023).

2) **viaduct**

IHO Definition: A structure consisting of a series of arches or towers supporting a roadway, waterway, etc., across a depression, etc. (IHO Dictionary – S-32).

3) **pontoon bridge**

IHO Definition: A fixed floating bridge supported by pontoons. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3rd Edition, 1984).

4) **suspension bridge**

IHO Definition: A fixed bridge consisting of either a roadway or a truss suspended from two or more cables which pass over towers and are anchored by backstays to a firm foundation. (McGraw-Hill Encyclopaedia of Science and Technology, 7th Edition, 1992).

5) **transporter bridge**

IHO Definition: Consists of towers on each side of the watercourse connected by a system of girders on which a carriage runs. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

No remarks.

## 27.12 bridge function (CATBRG)

IHO Definition: **BRIDGE FUNCTION.** A specific role that describes the purpose of a bridge.

Attribute Type: Enumeration

1) **vehicular**

IHO Definition: Of, relating to, or designed for vehicles and especially motor vehicles. (Merriam-Webster On-line Dictionary, July 2023).

2) **rail**

IHO Definition: Of, relating to, or designed for vehicles that run on a guiding track(s), especially trains.

3) **pedestrian**

IHO Definition: Of, relating to, or designed for walking. (Merriam-Webster On-line Dictionary, July 2023).

4) **aqueduct**

IHO Definition: A bridge supporting an artificially elevated channel, for the conveyance of water. (Adapted from The New Shorter Oxford English Dictionary, 1993).

Remarks:

No remarks.

**27.13 building shape (BUISHP)**

IHO Definition: **BUILDING SHAPE.** The specific shape of the building.

Attribute Type: Enumeration

5) **high-rise building**

IHO Definition: A building having many storeys. (The New Shorter Oxford English Dictionary, 1993).

6) **pyramid**

IHO Definition: A polyhedron of which one face is a polygon of any number of sides, and the other faces are triangles with a common vertex. (The New Shorter Oxford English Dictionary, 1993).

7) **cylindrical**

IHO Definition: Shaped like a cylinder, which is a solid geometrical figure generated by straight lines fixed in direction and describing with one of its points a closed curve, especially a circle. (The New Shorter Oxford English Dictionary, 1993).

8) **spherical**

IHO Definition: Shaped like a sphere, which is a body the surface of which is at all points equidistant from the centre. (The New Shorter Oxford English Dictionary, 1993).

9) **cubic**

IHO Definition: A shape the sides of which are six equal squares; a regular hexahedron. (The New Shorter Oxford English Dictionary, 1993).

Remarks:

No remarks.

**27.14 bunker vessel, availability (bunves)**

IHO Definition: Indication of the availability of a bunker vessel.

1) **Bunker Vessel Available**

IHO Definition: A bunker vessel is available.

2) **No Bunker Vessel Available**

IHO Definition: A bunker vessel is not available.

Remarks:

No remarks.

**27.15 buoy shape (BOYSHP)**

IHO Definition: **BUOY SHAPE.** The principal shape and/or design of a buoy. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Attribute Type: Enumeration1) **conical**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has approximately the shape or the appearance of a pointed cone with the point upwards. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

2) **can**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the shape of a cylinder, or a truncated cone that approximates to a cylinder, with a flat end uppermost. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

3) **spherical**

IHO Definition: Shaped like a sphere, which is a body the surface of which is at all points equidistant from the centre. (The New Shorter Oxford English Dictionary, 1993).

4) **pillar**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure is a narrow vertical structure, pillar or lattice tower. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

5) **spar**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the form of a pole, or of a very long cylinder, floating upright. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

6) **barrel**

IHO Definition: The upper part of the body above the water-line, or the greater part of the superstructure, has the form of a barrel or cylinder floating horizontally. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

7) **superbuoy**

IHO Definition: A very large buoy designed to carry a signal light of high luminous intensity at a high elevation. (IHO Dictionary – S-32).

8) **ice buoy**

IHO Definition: A specially constructed shuttle shaped buoy which is used in ice conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.7, November 2000).

Remarks:

- The principal shapes are those recommended in the International Association of Lighthouse Authorities – IALA System.

**27.16 buried depth (BURDEP)**

IHO Definition: **BURIED DEPTH.** The depth below the seabed to which an object is buried. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.8, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 20

Range closure: Left half-open interval (*minimum* < **buried depth** ≤ *maximum*)

Example: **2.5** for a depth of 2.5 metres

Remarks:

No remarks.

**27.17 call sign (CALSGN)**

IHO Definition: **CALL SIGN.** The designated call-sign of a station (radio station, radar station, pilot, ...). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.9, November 2000 (as amended)).

Attribute Type: Text

Remarks:

- The attribute **call sign** should contain no more than 150 characters.

**27.18 category of airport/airfield (CATAIR)**

IHO Definition: **CATEGORY OF AIRPORT/AIRFIELD.** Classification of airport/airfield based on the primary aircraft and user group.

Attribute Type: Enumeration

1) **military aeroplane airport**

IHO Definition: A large military airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (Adapted from The Macquarie Dictionary, 1988).

2) **civil aeroplane airport**

IHO Definition: A large airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (The Macquarie Dictionary, 1988).

3) **military heliport**

IHO Definition: A landing place for helicopters controlled by the military. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.10, November 2000).

4) **civil heliport**

IHO Definition: A landing place for helicopters, often the roof of a building. (The Macquarie Dictionary, 1988).

5) **glider airfield**

IHO Definition: An area of land set aside for the take-off and landing of gliders. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.10, November 2000).

6) **small planes airfield**

IHO Definition: An area of land set aside for the take-off and landing of small aeroplanes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.10, November 2000).

8) **emergency airfield**

IHO Definition: An area of land set aside for the take-off and landing of aeroplanes or helicopters in times of emergency. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.10, November 2000).

9) **search and rescue airfield**

IHO Definition: An area of land set aside for the take-off and landing of aeroplanes or helicopters in times of search and rescue.

Remarks:

No remarks.

## 27.19 category of anchorage (CATACH)

IHO Definition: **CATEGORY OF ANCHORAGE.** Classification of an area where different use types of vessel can remain static.

Attribute Type: Enumeration

1) **unrestricted anchorage**

IHO Definition: An area in which vessels anchor or may anchor. (IHO Dictionary – S-32).

2) **deep water anchorage**

IHO Definition: An area in which vessels of deep draught anchor or may anchor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

3) **tanker anchorage**

IHO Definition: An area in which tankers anchor or may anchor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

4) **explosives anchorage**

IHO Definition: An area set apart for anchored ships discharging or receiving explosives.

5) **quarantine anchorage**

IHO Definition: An area where a vessel anchors when satisfying quarantine regulations. (IHO Dictionary – S-32).

6) **seaplane anchorage**

IHO Definition: An area in which seaplanes anchor or may anchor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

7) **small craft anchorage**

IHO Definition: An area in which yachts and small boats anchor or may anchor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

9) **anchorage for periods up to 24 hours**

IHO Definition: An area in which vessels anchor or may anchor for periods of up to 24 hours. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

10) **anchorage for a limited period of time**

IHO Definition: An area in which vessels may anchor for a period of time not to exceed a specific limit. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

11) **anchorage for other vessels than pushing navigation vessels**

IHO Definition: An area where other vessels than pushing-navigation vessels may anchor.

12) **anchorage for dry cargo vessels**

IHO definition: An area where dry cargo vessels may anchor.

13) **anchorage for rafts**

IHO definition: An area where rafts may anchor.

14) **waiting anchorage**

IHO Definition: An area in which vessels anchor or may anchor while waiting, for example, for access to a port or berth.

15) **reported anchorage**

IHO Definition: A location not defined by a regulatory authority that has been reported to be suitable and safe for anchoring.

16) **anchorage for pushing navigation vessels**

IHO definition: An area where pushing-navigation vessels may anchor.

Remarks:

No remarks.

## 27.20 category of authority

IHO Definition: The type of person, government agency or organisation granted powers of managing or controlling access to and/or activity in an area.

### 2) **Border Control**

IHO Definition: The administration to prevent or detect and prosecute violations of rules and regulations at international boundaries.

### 3) **Police**

IHO Definition: The department of government, or civil force, charged with maintaining public order.

### 4) **Port**

IHO Definition: 1) Person or corporation, owners of, or entrusted with or invested with the power of managing a port. May be called a Harbour Board, Port Trust, Port Commission, Harbour Commission, Marine Department.

2) For port and near shore operations.

### 5) **Immigration**

IHO Definition: The authority controlling people entering a country.

### 6) **Health**

IHO Definition: The authority with responsibility for checking the validity of the health declaration of a vessel and for declaring free pratique.

### 7) **Coast Guard**

IHO Definition: Organization keeping watch on shipping and coastal waters according to governmental law; normally the authority with responsibility for search and rescue.

### 8) **Agricultural**

IHO Definition: The authority with responsibility for preventing infection of the agriculture of a country and for the protection of the agricultural interests of a country.

### 9) **Military**

IHO Definition: A military authority which provides control of access to or approval for transit through designated areas or airspace.

### 10) **Private Company**

IHO Definition: A private or publicly owned company or commercial enterprise which exercises control of facilities, for example a calibration area.

### 11) **Maritime Police**

IHO Definition: A governmental or military force with jurisdiction in territorial waters. Examples could include Gendarmerie Maritime, Carabinerie, and Guardia Civil.

### 12) **Environmental**

IHO Definition: An authority with responsibility for the protection of the environment.

### 13) **Fishery**

IHO Definition: An authority with responsibility for the control of fisheries.

### 14) **Finance**

IHO Definition: An authority with responsibility for the control and movement of money.

### 15) **Maritime**

IHO Definition: A national or regional authority charged with administration of maritime affairs.

### 16) **Customs**

IHO Definition: The agency or establishment for collecting duties, tolls.

Remarks:

No remarks.

## 27.21 category of built-up area (CATBUA)

IHO Definition: **CATEGORY OF BUILT-UP AREA.** Human settlement classification.

Attribute Type: Enumeration

### 1) **urban area**

IHO Definition: An area predominantly occupied by man-made structures used for residential, commercial, and industrial purposes. (Nautical Chart Manual, US Department of Commerce, 1992).

### 2) **settlement**

IHO Definition: A continuously occupied concentration of tents or lightweight fixed structures (for example: huts) serving as residences. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 3) **village**

IHO Definition: A self-contained group of houses and associated buildings, usually in a country area. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 4) **town**

IHO Definition: An inhabited place larger and more regularly built and with more complete and independent local government than a village but not incorporated as a city. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 5) **city**

IHO Definition: A major town inhabited by a large permanent community with all essential services. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 6) **holiday village**

IHO Definition: A complex for holiday-makers with cottages, shops, and entertainment, on site, which is mainly populated on a seasonal basis. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

No remarks.

## 27.22 category of bunker station (catbun)

IHO Definition: Category of bunker station.

### 1) **Diesel Oil**

IHO Definition: Diesel oil available.

### 2) **Water**

IHO Definition: A colourless, odourless, tasteless liquid that is a compound of hydrogen and oxygen.

### 3) **Ballast**

IHO Definition: Material carried by a ship to ensure its stability.

### 4) **Power**

IHO Definition: Power supply available.

### 5) **Compressed Hydrogen Bunkering**

IHO Definition: Transfer of compressed hydrogen to the fuel tanks of a ship.

### 6) **Liquefied Hydrogen Bunkering**

IHO Definition: Transfer of liquefied hydrogen to the fuel tanks of a ship.

7) **Methanol Bunkering**

IHO Definition: Transfer of methanol to the fuel tanks of a ship.

8) **Ammonia Bunkering**

IHO Definition: Transfer of ammonia to the fuel tanks of a ship.

Remarks:

No remarks.

## 27.23 category of cable (CATCBL)

IHO Definition: **CATEGORY OF CABLE.** Classification of the cable based on the services provided.

Attribute Type: Enumeration

1) **power line**

IHO Definition: A cable that transmits or distributes electrical power. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **transmission line**

IHO Definition: Multiple un-insulated cables usually supported by steel lattice towers. Such features are generally more prominent than normal power lines. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.16, November 2000).

4) **telephone**

IHO Definition: A cable that transmits telephone signals.

5) **telegraph**

IHO Definition: An apparatus, system or process for communication at a distance by electric transmission over wire.

6) **mooring cable**

IHO Definition: A chain or very strong fibre or wire rope used to anchor or moor vessels or buoys. (IHO Dictionary – S-32).

7) **ferry**

IHO Definition: A vessel for transporting passengers, vehicles, and/or goods across a stretch of water, especially as a regular service. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2016).

A ferry cable is a cable or chain used to facilitate the movement of a ferry.

8) **fibre optic cable**

IHO Definition: A cable made of glass or plastic fibre designed to guide light along its length, fibre optic cables are widely used in fibre-optic communication, which permits transmission over longer distances and at higher data rates than other forms of communication.

9) **junction cable**

IHO Definition: A cable used for joining components of complex marine structures, for example mooring trots.

10) **telecommunications cable**

IHO Definition: A cable used for the transmission and reception of modulated communication waves/signals. (Adapted from Wikipedia).

Remarks:

No remarks.

## 27.24 category of canal (CATCAN)

IHO Definition: **CATEGORY OF CANAL.** Classification of an artificial waterway used for travel, drainage, or irrigation.

Attribute Type: Enumeration

### 1) **transportation**

IHO Definition: A canal used for navigation as part of a transport system. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.17, November 2000).

### 2) **drainage**

IHO Definition: A canal used to drain excess water from surrounding land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.17, November 2000).

### 3) **irrigation**

IHO Definition: A canal used to supply water for the purpose of irrigation. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.17, November 2000).

Remarks:

No remarks.

## 27.25 category of cardinal mark (CATCAM)

IHO Definition: **CATEGORY OF CARDINAL MARK.** The four quadrants (north, east, south and west) are bounded by the true bearings NW-NE, NE-SE, SE-SW and SW-NW taken from the point of interest.

A cardinal mark is named after the quadrant in which it is placed.

The name of the cardinal mark indicates that it should be passed to the named side of the mark. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.18, November 2000).

Attribute Type: Enumeration

### 1) **north cardinal mark**

IHO Definition: Quadrant bounded by the true bearing NW-NE taken from the point of interest; it should be passed to the north side of the mark. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.18, November 2000).

### 2) **east cardinal mark**

IHO Definition: Quadrant bounded by the true bearing NE-SE taken from the point of interest. It should be passed to the east side of the mark. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.18, November 2000).

### 3) **south cardinal mark**

IHO Definition: Quadrant bounded by the true bearing SE-SW taken from the point of interest; it should be passed to the south side of the mark. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.18, November 2000).

### 4) **west cardinal mark**

IHO Definition: Quadrant bounded by the true bearing SW-NW taken from the point of interest; it should be passed to the west side of the mark. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.18, November 2000).

Remarks:

- Cardinal marks do not have a distinctive shape but are normally pillar or spar. To conform to the IALA Maritime Buoyage System, they are always coloured in yellow and black horizontal bands and their distinctive double

cone top-marks are always black. Cardinal marks may also have a special system of flashing white lights and if such lights are fitted they are encoded as separate **Light** features.

## 27.26 category of cargo

IHO Definition: **CATEGORY OF CARGO.** Classification of the different types of cargo that a ship may be carrying. (IHO Nautical Information Provision Working Group, 2016).

Attribute Type: Enumeration

1) **bulk**

IHO Definition: Unpacked homogenous cargo poured loose in a certain space of a vessel, for example oil or grain. (Inland ENC Harmonization Group, Feature Catalogue Edition 2.4).

2) **container**

IHO Definition: One of a number of standard sized cargo carrying units, secured using standard corner attachments and bar. (IHO Nautical Information Provision Working Group, 2016).

3) **general**

IHO Definition: Break bulk cargo normally loaded by crane. (IHO Nautical Information Provision Working Group, 2016).

4) **liquid**

IHO Definition: Any cargo loaded by pipeline. (IHO Nautical Information Provision Working Group, 2016).

5) **passenger**

IHO Definition: A fee paying traveller. (IHO Nautical Information Provision Working Group, 2016).

6) **livestock**

IHO Definition: Live animals carried in bulk. (IHO Nautical Information Provision Working Group, 2016).

7) **dangerous or hazardous**

IHO Definition: Dangerous or hazardous cargo as described by the IMO International Maritime Dangerous Goods code. (IHO Nautical Information Provision Working Group, 2016).

8) **heavy lift**

IHO Definition: Indivisible heavy items of weight generally over 100 tons, and width or height greater than 100 metres. (Adapted from Wikipedia).

9) **ballast**

IHO Definition: Material carried by a ship to ensure its stability. (Adapted from Oxford English Dictionary).

10) **dry bulk cargo**

IHO Definition: Commodity cargo that is transported unpackaged in large quantities. These types of goods usually need to be kept dry during the whole transportation period. (Adapted from WÄRTSILÄ Encyclopedia of Marine and Energy Technology).

11) **liquid bulk cargo**

IHO Definition: Liquids or gases that are transported in bulk and carried unpackaged. (Adapted from Wikipedia).

12) **reefer container cargo**

IHO Definition: Cargo transported in refrigerated containers, generally perishable commodities which require temperature-controlled transportation, such as fruit, meat, fish, vegetables, dairy products and other foods. (Adapted from Wikipedia).

13) **Ro-Ro cargo**

IHO Definition: Wheeled cargo, such as cars, busses, trucks, agricultural vehicles and cranes, that are driven on and off the ship on their own wheels or using a platform vehicle, such as a self-propelled modular transporter. (Wikipedia).

#### 14) **project cargo**

IHO Definition: Project cargo is a term used to broadly describe the national or international transportation of large, heavy, high value, or critical (to the project they are intended for) pieces of equipment. Also commonly referred to as heavy lift, this includes shipments made of various components which need disassembly for shipment and reassembly after delivery. (Wikipedia).

#### 15) **break bulk cargo**

IHO Definition: Goods that are stowed on board ship in individually counted units, and not in intermodal containers nor in bulk as with oil or grain. (Adapted from Wikipedia).

#### Remarks:

- For **category of cargo (including)** (lc\_cci) and **category of cargo (excluding)** (lc\_cce) see 27.28 and 27.27

### 27.27 **category of cargo (excluding) (lc\_cce)**

IHO Definition: Excluding list of categories of cargo for the applicability of a feature.

#### 1) **All Types**

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

#### 2) **Other**

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

#### 4) **Bulk**

IHO Definition: Unpacked homogenous cargo poured loose in a certain space of a vessel e.g. oil or grain.

#### 5) **Dry Cargo**

IHO Definition: Goods, such as coal, metals, and grain, that are not liquid and are carried in large quantities by ship or in another large vehicle.

#### 6) **Liquid Cargo**

IHO Definition: Commodities that are shipped in a liquefied state, by vessels designed to handle liquids.

#### 7) **Liquid Cargo (Type N)**

IHO Definition: Commodities that are shipped in a liquefied state, by Type N vessels designed to handle liquids.

#### 8) **Liquid Cargo (Type C)**

IHO Definition: Commodities that are shipped in a liquefied state, by Type C vessels designed to handle liquids.

#### 9) **Gas**

IHO Definition: A substance with particles that can move freely, usually a fuel substance in the context of storage tanks.

#### Remarks:

No remarks.

### 27.28 **category of cargo (including) (lc\_cci)**

IHO Definition: Including list of categories of cargo for the applicability of a feature.

**1) All Types**

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

**2) Other**

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

**4) Bulk**

IHO Definition: Unpacked homogenous cargo poured loose in a certain space of a vessel e.g. oil or grain.

**5) Dry Cargo**

IHO Definition: Goods, such as coal, metals, and grain, that are not liquid and are carried in large quantities by ship or in another large vehicle.

**6) Liquid Cargo**

IHO Definition: Commodities that are shipped in a liquefied state, by vessels designed to handle liquids.

**7) Liquid Cargo (Type N)**

IHO Definition: Commodities that are shipped in a liquefied state, by Type N vessels designed to handle liquids.

**8) Liquid Cargo (Type C)**

IHO Definition: Commodities that are shipped in a liquefied state, by Type C vessels designed to handle liquids.

**9) Gas**

IHO Definition: A substance with particles that can move freely, usually a fuel substance in the context of storage tanks.

Remarks:

No remarks.

**27.29 category of CEMT class (catccl)**

IHO Definition: Category of CEMT class.

**1) 0 Small Vessels and Pleasure Craft**

IHO Definition: Designated for small vessels and pleasure crafts only.

**2) I Peniche**

IHO Definition: Designated for barges of type "Pniche" (west of river Elbe) or of type "Gross Finow" (east of river Elbe).

**3) II Campine Barge**

IHO Definition: Designated for barges of type "Kempenaar" (west of river Elbe) or of type "BM-500" (east of river Elbe).

**4) III Dortmund-Ems Barge**

IHO Definition: Designated for barges of type "Gustav Koenigs" (west of river Elbe) or of a similar type concerning the dimensions (east of river Elbe).

**5) IV Rhine-Herne Barge**

IHO Definition: Designated for barges of type "Johann Welker".

**6) Va Large Rhine Barge; 1-Barge Push-Tow Unit**

IHO Definition: Designated for barges of type "Large Rhine barge" or pushed convoys with one barge.

**7) Vb 2-Barge Push-Tow Unit; Long Formation**

IHO Definition: Designated for pushed convoys with two barges, long formation.

**8) Vla 2-Barge Push-Tow Unit; Wide Formation**

IHO Definition: Designated for pushed convoys with two barges, wide formation.

**9) Vlb 4-Barge Push-Tow Unit**

IHO Definition: Designated for pushed convoys with four barges.

**10) Vlc 6-Barge Push-Tow Unit**

IHO Definition: Designated for pushed convoys with six barges.

**11) No CEMT Class**

IHO Definition: A waterway having no classification for interoperability of large navigable waterways forming part of the Trans-European Inland Waterway network within Continental Europe and Russia.

**12) VII 9-Barge Push-Tow Unit**

IHO Definition: Designated for pushed convoys with nine barges.

Remarks:

No remarks.

**27.30 category of checkpoint (CATCHP)**

IHO Definition: **CATEGORY OF CHECKPOINT.** Classification of a place where vehicles or travellers are stopped for identification or inspection.

Attribute Type: Enumeration

**1) custom**

IHO Definition: Serves as a government checkpoint where customs duties are collected, the flow of goods are regulated and restrictions enforced, and shipments or vehicles are cleared for entering or leaving a country. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**2) border**

IHO Definition: An office, at which immigration control takes place.

Remarks:

No remarks.

**27.31 category of coastline (CATCOA)**

IHO Definition: **CATEGORY OF COASTLINE.** Physical condition of the coastline.

Attribute Type: Enumeration

**1) steep coast**

IHO Definition: A coast backed by rock or earth cliffs, gives a good radar return and is useful for visual identification from a considerable distance off, where cliffs alternate with low lying coast along the shoreline. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.20, November 2000).

**2) flat coast**

IHO Definition: A level coast with no obvious topographic features. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.20, November 2000).

3) **sandy shore**

IHO Definition: A shoreline area made up of sand, that is, loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter.

4) **stony shore**

IHO Definition: A shoreline area made up of rock and rock fragments ranging in size from pebbles and gravel to boulders or large rock masses.

5) **shingly shore**

IHO Definition: A shoreline area made up of rounded, often flat waterworn rock fragments larger than approximately 16 millimetres.

6) **glacier, seaward end**

IHO Definition: Projecting seaward extension of glacier, usually afloat. (IHO Dictionary – S-32).

7) **mangrove**

IHO Definition: One of several genera of tropical trees or shrubs which produce many prop roots and grow along low-lying coasts into shallow water. (IHO Dictionary – S-32).

8) **marshy shore**

IHO Definition: A shoreline area made up of spongy land saturated with water. It may have a shallow covering of water, usually with a considerable amount of vegetation appearing above the surface. (Adapted from IHO Dictionary – S-32).

9) **coral reef**

IHO Definition: A reef, often of large extent, composed chiefly of coral and its derivatives.

10) **ice coast**

IHO Definition: A vertical cliff forming the seaward edge of an ice shelf, ranging in height from 2 metres to 50 metres or more above sea level. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.21, November 2000).

11) **shelly shore**

IHO Definition: A shoreline area made up of shells, that is, made up of the hard outside covering of marine animals.

Remarks:

No remarks.

## 27.32 category of communication (catcom)

IHO Definition: Category of communication.

1) **VTS Centre**

IHO Definition: The centre from which Vessel Traffic Services are operated. A VTS is a service implemented by a competent authority, designed to improve the safety and efficiency of vessel traffic and to protect the environment. The services should have the capability to interact with the traffic and to respond to traffic situations developing in the area.

2) **VTS Sector**

IHO Definition: The service area of a VTS centre.

3) **IVS Point**

IHO Definition: A reporting point of the "Informatie en Volgsysteem voor de Scheepvaart" in the Netherlands.

4) **MIB**

IHO Definition: A reporting point of the "Melde- und Informationssystem Binnenschifffahrt" in Germany.

5) **Lock**

IHO Definition: A signal station for the control of vessels entering or leaving a lock.

#### 6) Bridge

IHO Definition: (1) An elevated structure extending across or over the weather deck of a vessel, or part of such a structure. The term is sometimes modified to indicate the intended use, such as navigating bridge or signal bridge. (2) A structure erected over a depression or an obstacle such as a body of water, railroad, etc., to provide a roadway for vehicles or pedestrians.

#### 7) Custom

IHO Definition: Serves as a government checkpoint where customs duties are collected, the flow of goods are regulated and restrictions enforced, and shipments or vehicles are cleared for entering or leaving a country.

#### 8) Harbour

IHO Definition: A reporting point of a harbour.

#### 9) WLAN Area

IHO Definition: An area where free wireless network is available.

Remarks:

No remarks.

### 27.33 category of conveyor (CATCON)

IHO Definition: **CATEGORY OF CONVEYOR.** Classification of conveyor used for moving goods from one location to another.

Attribute Type: Enumeration

#### 1) aerial cableway

IHO Definition: A transportation system consisting of load cables strung between pylons on which carrier units (for example: cars or buckets intended to transport people, material, and/or equipment) are suspended. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

#### 2) belt conveyor

IHO Definition: A conveyor along which material or people are transported by means of a moving belt. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.23, November 2000).

#### 3) flume

IHO Definition: An artificial channel, usually an inclined chute or trough, for carrying water to furnish power, transport logs down a mountainside, etc. (Websters New World Dictionary Third College Edition).

#### 4) lift/elevator

IHO Definition: Any of various mechanical devices for raising objects or materials.

Remarks:

No remarks.

### 27.34 category of crane (CATCRN)

IHO Definition: **CATEGORY OF CRANE.** Classification of machines used for hoisting and moving heavy objects.

Attribute Type: Enumeration

#### 2) container crane/gantry

IHO Definition: A high speed, shore-based crane used in the lift-on/lift-off operation of specially constructed containers. (Adapted from Nautical Chart Manual, US Department of Commerce, Coast and Geodetic Survey, 7<sup>th</sup> Edition).

3) **sheerlegs**

IHO Definition: A tripodal structure used in dockyards and harbours for stepping masts or lifting loads in to and out of vessels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.25, November 2000).

4) **travelling crane**

IHO Definition: A crane mounted on rails (track) that can move (usually parallel to the wharf face) in order to load and unload cargo vessels. (Canadian Hydrographic Service).

5) **A-frame**

IHO Definition: A type of crane shaped like the letter “A”. (Canadian Hydrographic Service).

6) **goliath crane**

IHO Definition: A powerful travelling crane mounted on a movable gantry of large span. (Merriam-Webster Dictionary).

Remarks:

No remarks.

## 27.35 category of dam (CATDAM)

IHO Definition: **CATEGORY OF DAM.** Classification of a structure acting as barrier to water flow.

Attribute Type: Enumeration

1) **weir**

IHO Definition: A dam erected across a river to raise the level of the water. A fence of stakes set in a river or along the shore as a trap for fish. The word is now restricted to smaller works, the larger are called dams. (IHO Dictionary – S-32).

2) **dam**

IHO Definition: A barrier to check or confine anything in motion; particularly one constructed to hold back water and raise its level to form a reservoir, or to prevent flooding. (IHO Dictionary – S-32).

3) **flood barrage**

IHO Definition: An opening dam across a channel which, when required, is closed to control flood waters. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.26, November 2000).

Remarks:

No remarks.

## 27.36 category of distance mark (catdis)

IHO Definition: Classification of fixed and virtual distance marks.

1) **Distance Mark Not Physically Installed**

IHO Definition: A point at which a distance from an origin along a feature is given for information, but at which no specific marker exists.

2) **Visible Mark, Pole**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is marked by a pole.

3) **Visible Mark, Board**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is marked by a board.

#### 4) **Visible Mark, Unknown Shape**

IHO Definition: A point at which a distance from an origin along a feature is given for information and which is physically marked, but the shape of the mark is not known or not given.

Remarks:

No remarks.

### 27.37 category of dock (CATDOC)

IHO Definition: **CATEGORY OF DOCK.** Classification of vessel dock.

Attribute Type: Enumeration

#### 1) **tidal**

IHO Definition: A dock which is open to the sea and in which the water level is affected by tides. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.28, November 2000).

#### 2) **wet dock**

IHO Definition: A dock in which water can be maintained at any level by closing a gate when the water is at the desired level. (IHO Dictionary – S-32).

Remarks:

No remarks.

### 27.38 category of dolphin

IHO Definition: **CATEGORY OF DOLPHIN.** Classification of a post or group of posts, used for mooring or warping a vessel. (Adapted from IHO dictionary – S-32).

Attribute Type: Enumeration

#### 1) **mooring dolphin**

IHO Definition: A post or group of posts driven into the seabed or riverbed, used as a mooring point for vessels. (Adapted from Wikipedia).

#### 2) **deviation dolphin**

IHO Definition: A post or group of posts, which a vessel may swing around for compass adjustment. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

#### 3) **berthing dolphin**

IHO Definition: A post or group of posts driven into the seabed or riverbed, used to extend the berth of a vessel by providing extra mooring points.

#### 4) **fender or breasting dolphin**

IHO Definition: A post or group of posts driven into the seabed or riverbed, used to assist in berthing of vessels by taking up some berthing loads; keep vessels from pressing against the pier structure; or to protect structures from possible impact by ships.

Remarks:

No remarks.

### 27.39 category of dumping ground (CATDPG)

IHO Definition: **CATEGORY OF DUMPING GROUND.** Classification of an area based on the type of waste being disposed of.

Attribute Type: Enumeration

2) **chemical waste dumping ground**

IHO Definition: An area at sea where chemical waste is dumped. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.29, November 2000).

3) **nuclear waste dumping ground**

IHO Definition: An area at sea where nuclear waste is dumped. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.29, November 2000).

4) **explosives dumping ground**

IHO Definition: An area at sea where explosives are dumped. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.29, November 2000).

5) **spoil ground**

IHO Definition: A sea area where dredged material is deposited. (IHO Dictionary – S-32).

6) **vessel dumping ground**

IHO Definition: An area at sea where disused vessels are scuttled. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.29, November 2000).

Remarks:

No remarks.

### 27.40 category of exceptional structure (catexs)

IHO Definition: Category of exceptional navigational structure.

1) **Lift-Lock**

IHO Definition: A lock of which the lock chamber itself is lifted vertically to level with the next waterway section.

2) **Aqueduct**

IHO Definition: A bridge supporting an artificially elevated channel, for the conveyance of water.

3) **Sloping Plane Lock**

IHO Definition: A lock of which the lock chamber itself travels over a sloping plane to level with the next waterway section.

4) **Water Slope Lock**

IHO Definition: In French "Pente d'Eau". A lock of which the lock chamber is formed by a sloping plane and moving gate, which is pushing a triangular section of water up along the slope to level with the next waterway section.

5) **Other**

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

Remarks:

No remarks.

### 27.41 category of fence (CATFNC)

**IHO Definition: CATEGORY OF FENCE.** Classification of a physical boundary.

**Attribute Type:** Enumeration

1) **fence**

**IHO Definition:** A man-made barrier of relatively light structure used as an enclosure or boundary. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **hedge**

**IHO Definition:** A continuous growth of shrubbery planted as a fence, a boundary or a wind break. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **wall**

**IHO Definition:** A solid man-made barrier of generally heavy material used as an enclosure, boundary, or for protection. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**Remarks:**

No remarks.

### 27.42 category of ferry (CATFRY)

**IHO Definition: CATEGORY OF FERRY.** Classification of the manoeuvrability of the ferry vessel, not the various types of ferry vessel.

**Attribute Type:** Enumeration

1) **free moving ferry**

**IHO Definition:** A ferry which may have routes that vary with weather, tide and traffic. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.32, November 2000).

2) **cable ferry**

**IHO Definition:** A ferry that follows a fixed route guided by a cable. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.32, November 2000).

3) **ice ferry**

**IHO Definition:** A winter-time ferry which crosses a lead. (Finnish Maritime Administration).

4) **swinging wire ferry**

**IHO Definition:** Ferry connected to a fixed point (for example an anchor in the middle of the waterway) and swings around this point from shore to shore via a cable to an anchor. The cable runs more or less parallel to the current.

5) **high speed ferry**

**IHO Definition:** A high speed water vessel for civilian use.

**Remarks:**

- The attribute “category of ferry” does not encode the various types of ferry vessel, but the manoeuvrability of the ferry. The value “cable ferry” indicates a ferry that follows a fixed route guided by a cable. A cable ferry and a swinging wire ferry may hinder the flow of other traffic.

### 27.43 category of fishing facility (CATFIF)

**IHO Definition: CATEGORY OF FISHING FACILITY.** Classification of fishing facility provided based on different fishing methods.

**Attribute Type:** Enumeration

1) **fishing stake**

IHO Definition: Poles or stakes placed in shallow water to outline a fishing ground or to catch fish. (IHO Dictionary – S-32).

2) **fish trap**

IHO Definition: A structure (usually portable) for catching fish. (Adapted from IHO Dictionary – S-32).

3) **fish weir**

IHO Definition: A fence of stakes or stones set in a river or along the shore to trap fish. (Adapted from IHO Dictionary – S-32).

4) **tunny net**

IHO Definition: A net built at sea for catching tunny. (IHO Dictionary – S-32).

Remarks:

No remarks.

**27.44 category of fog signal (CATFOG)**

IHO Definition: **CATEGORY OF FOG SIGNAL.** Classification of the various means of generating the fog signal.

Attribute Type: Enumeration

1) **explosive**

IHO Definition: A signal produced by the firing of explosive charges. (Admiralty List of Lights and Fog Signals).

2) **diaphone**

IHO Definition: A diaphone uses compressed air and generally emits a powerful low-pitched sound, which often concludes with a brief sound of suddenly lowered pitch, termed the “grunt”. (Admiralty List of Lights and Fog Signals).

3) **siren**

IHO Definition: A type of fog signal apparatus which produces sound by virtue of the passage of air through slots or holes in a revolving disk. (IHO Dictionary – S-32).

4) **nautophone**

IHO Definition: A horn having a diaphragm oscillated by electricity. (IHO Dictionary – S-32).

5) **reed**

IHO Definition: A reed uses compressed air and emits a weak, high pitched sound. (Admiralty List of Lights and Fog Signals).

6) **tyfon**

IHO Definition: A diaphragm horn which operates under the influence of compressed air or steam. (IHO Dictionary – S-32).

7) **bell**

IHO Definition: A ringing sound with a short range. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.34, November 2000).

8) **whistle**

IHO Definition: A distinctive sound made by a jet of air passing through an orifice. The apparatus may be operated automatically, by hand or by air being forced up a tube by waves acting on a buoy. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.34, November 2000).

9) **gong**

IHO Definition: A sound produced by vibration of a disc when struck. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.34, November 2000).

10) **horn**

IHO Definition: A horn uses compressed air or electricity to vibrate a diaphragm and exists in a variety of types which differ greatly in their sound and power. (Admiralty List of Lights and Fog Signals).

Remarks:

- The apparatus may be operated automatically, by hand or by wave action.
- The attribute **category of fog signal** encodes the various means of generating the signal. The classification **horn** is the generic term for fog signals **nautophone**, **reed** and **tyfon**.

## 27.45 category of fortified structure (CATFOR)

IHO Definition: **CATEGORY OF FORTIFIED STRUCTURE.** Classification of the different types of fortified structure.

Attribute Type: Enumeration

1) **castle**

IHO Definition: A large fortified building or structure. (Adapted from The Collins Dictionary).

2) **fort**

IHO Definition: A fortified enclosure, building, or position able to be defended against an enemy. (The Collins Dictionary).

3) **battery**

IHO Definition: A fortified structure on which artillery is mounted. (The Collins Dictionary).

4) **blockhouse**

IHO Definition: A concrete structure strengthened to give protection against enemy fire, with apertures to allow defensive gunfire. (The Collins Dictionary).

5) **fortified tower**

IHO Definition: A small circular fort with very thick walls (for example Martello tower). (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **redoubt**

IHO Definition: An outwork or fieldwork usually square or polygonal and without flanking defences. (Concise Oxford Dictionary).

8) **fortified submarine shelter**

IHO Definition: A fortified pen to hold submarines.

9) **rampart**

IHO Definition: Anything serving as a bulwark or defence.

Remarks:

No remarks.

## 27.46 category of frequency (catfrq)

IHO Definition: The electrical frequency provided by the power supply station.

1) **50Hz**

IHO Definition: 50 Hertz

2) **60Hz**

IHO Definition: 60 Hertz

Remarks:

•No remarks.

## 27.47 category of gate (CATGAT)

IHO Definition: **CATEGORY OF GATE.** Classification of a structure that can be swung, drawn, or lowered to block an entrance or a passageway.

Attribute Type: Enumeration

### 2) flood barrage gate

IHO Definition: An opening gate used to control flood water. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 3) caisson

IHO Definition: A steel structure used for closing the entrance of locks, wet and dry docks. (IHO Dictionary – S-32).

### 4) lock gate

IHO Definition: Pair of massive hinged doors at each end of a lock. (IHO Dictionary – S-32).

### 5) dyke gate

IHO Definition: An opening gate in a dyke. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 6) sluice

IHO Definition: A sliding gate or other contrivance for changing the level of a body of water by controlling the flow into or out of it. (IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.48 category of harbour area (cathbr)

IHO Definition: Classification of a harbour.

### 1) Custom Harbour

IHO Definition: A harbour that is administered by the customs. It may be a free harbour.

### 2) Port of Refuge

IHO Definition: A harbour that can be used to find shelter for bad environmental conditions or where efforts to mitigate larger damage or threat(s) of damage to either the vessel, her crew or the environment can be rendered.

### 3) Yacht Harbour/Marina

IHO Definition: A harbour facility for small boats, yachts, etc., where supplies, repairs, and various services are available.

### 4) Fishing Harbour

IHO Definition: A harbour with facilities for fishing boats.

### 5) Private Harbour

IHO Definition: A harbour operated by a private body.

Remarks:

No remarks.

## 27.49 category of harbour facility (CATHAF)

**IHO Definition:** **CATEGORY OF HARBOUR FACILITY.** Classification of harbour use.

**Attribute Type:** Enumeration

1) **RoRo terminal**

**IHO Definition:** A terminal for roll-on roll-off ferries. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

3) **ferry terminal**

**IHO Definition:** A terminal for passenger and vehicle ferries. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

4) **fishing harbour**

**IHO Definition:** A harbour with facilities for fishing boats. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

5) **yacht harbour/marina**

**IHO Definition:** A harbour facility for small boats, yachts, etc., where supplies, repairs, and various services are available. (IHO Dictionary – S-32).

6) **naval base**

**IHO Definition:** A centre of operations for naval vessels. (Adapted from The Collins Dictionary).

7) **tanker terminal**

**IHO Definition:** A terminal for the bulk handling of liquid cargoes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

8) **passenger terminal**

**IHO Definition:** A terminal for the loading and unloading of passengers. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

9) **shipyard**

**IHO Definition:** A place where ships are built or repaired. (IHO Dictionary – S-32).

10) **container terminal**

**IHO Definition:** A terminal with facilities to load/unload or store shipping containers. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000, as amended).

11) **bulk terminal**

**IHO Definition:** A terminal for the handling of bulk materials such as iron ore, coal, etc. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

12) **ship lift**

**IHO Definition:** A platform powered by synchronous electric motors (for example syncrolift) used to lift vessels (larger than boats) in and out of the water. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

13) **straddle carrier**

**IHO Definition:** A wheeled vehicle designed to lift and carry containers or vessels within its own framework. It is used for moving, and sometimes stacking, shipping containers and vessels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.39, November 2000).

**14) service harbour**

IHO Definition: A harbour within which the floating equipment (dredges, tugs ...) of harbour services are stationed.

**15) pilotage service**

IHO Definition: The services of a person who directs the movements of a vessel through pilot waters, usually a person who has demonstrated extensive knowledge of channels, aids to navigation, dangers to navigation, etc., in a particular area and is licensed for that area, are available. (Adapted from IHO Hydrographic Dictionary – S-32).

**16) service and repair**

IHO Definition: A place where mechanical services or repairs can be undertaken to engines or other vessel equipment.

**17) quarantine station**

IHO Definition: A medical control center located in an isolated spot ashore where patients with contagious diseases from vessel in quarantine are taken.

**18) Official Transshipment Point For Large-Volume And Heavy Goods**

A terminal where large-volume and heavy goods according to the applicable national legislation can be transshipped.

Remarks:

No remarks.

**27.50 category of hulk (CATHLK)**

IHO Definition: **CATEGORY OF HULK.** Classification of an old or unseaworthy ship used for a new function.

Attribute Type: Enumeration

**1) floating restaurant**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used as a restaurant. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**2) historic ship**

IHO Definition: A ship of historical interest permanently moored as a tourist attraction. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**3) floating museum**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used as a museum. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**4) floating accommodation**

IHO Definition: A permanently moored floating structure (for example: an old ship) that is used for accommodation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**5) floating breakwater**

IHO Definition: A permanently moored floating structure, often constructed from old ships, used as a breakwater. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.40, November 2000).

**6) casino**

IHO Definition: A permanently moored floating structure, such as an old ship, used as a casino boat.

**7) training vessel**

IHO Definition: A permanently moored floating structure, often constructed from old ships, used for training purposes.

Remarks:

No remarks.

**27.51 category of installation buoy (CATINB)**IHO Definition: **CATEGORY OF INSTALLATION BUOY.** Classification of fixed installation buoy.Attribute Type: Enumeration**1) catenary anchor leg mooring**IHO Definition: Incorporates a large buoy which remains on the surface at all times and is moored by 4 or more anchors. Mooring hawsers and cargo hoses lead from a turntable on top of the buoy, so that the buoy does not turn as the ship swings to wind and stream. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.42, November 2000).**2) single buoy mooring**IHO Definition: A large mooring buoy used by tankers to load and unload in port approaches or in offshore oil and gas fields. (IHO Dictionary – S-32).Remarks:

No remarks.

**27.52 category of land region (CATLND)**IHO Definition: **CATEGORY OF LAND REGION.** General terms for describing landscapes.Attribute Type: Enumeration**1) fen**IHO Definition: A type of bog, especially a low-lying area, wholly or partly covered with water and dominated by grass-like plants, grasses, sedges and reeds. (The New Encyclopaedia Britannica, 15<sup>th</sup> Edition 1991).**2) marsh**IHO Definition: An area of wet, often spongy ground that is subject to frequent flooding or tidal inundations, but not considered to be continually under water. It is characterized by the growth of non woody plants and by the lack of trees. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).**3) bog**IHO Definition: Wet spongy ground consisting of decaying vegetation, which retains stagnant water, too soft to bear the weight of any heavy body. (IHO Dictionary – S-32).**4) heathland**IHO Definition: A tract of wasteland peat bog, usually covered by a low scrubby growth, but may have scattered small open water holes. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).**5) mountain range**IHO Definition: A series of connected and aligned mountains or mountain ridges. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).**6) lowlands**IHO Definition: Low and relatively level land at a lower elevation than adjoining areas. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).**7) canyon lands**

IHO Definition: A relatively narrow, deep depression with steep sides, the bottom of which generally has a continuous slope. (IHO Dictionary – S-32).

8) **paddy field**

IHO Definition: A piece of land set aside for crops which are periodically flooded (for example rice paddy). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.44, November 2000).

9) **agricultural land**

IHO Definition: Of or pertaining to the science or practice of cultivating the soil and rearing animals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **savanna/grassland**

IHO Definition: An open grassy plain with few or no trees in a tropical or subtropical region; a tract covered mainly by grasses that have little or no woody tissue. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

11) **parkland**

IHO Definition: A piece of ground kept for ornament and/or recreation or maintained in its natural state as a public property or area. (Websters New Collegiate Dictionary 1975).

12) **swamp**

IHO Definition: An area of spongy land saturated with water. It may have a shallow covering of water, usually with a considerable amount of vegetation appearing above the surface. (IHO Dictionary – S-32).

13) **landslide**

IHO Definition: The sliding down of a mass of land on a mountain or cliff-side; land which has so fallen. (IHO Dictionary – S-32).

14) **lava flow**

IHO Definition: The substance that results from the cooling of molten rock. (Adapted from IHO Dictionary – S-32).

15) **salt pan**

IHO Definition: Shallow pools of brackish water used for the natural evaporation of sea water to obtain salt. (IHO Dictionary – S-32).

16) **moraine**

IHO Definition: Any accumulation of loose material deposited by a glacier. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).

17) **crater**

IHO Definition: Bowl-shaped cavity, at the summit or on the side of a volcano. (IHO Dictionary – S-32). Also a hole formed by the impact of a meteor. (Nautical Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).

18) **cave**

IHO Definition: A natural subterranean chamber or series of chambers open to the earth's surface. (Merriam-Webster On-line Dictionary, March 2010).

19) **rock column or pinnacle**

IHO Definition: Any high tower or spire-shaped pillar of rock, alone or cresting a summit. (IHO Dictionary – S-32).

20) **cay**

IHO Definition: A small insular feature usually with scant vegetation; usually of sand or coral. Often applied to smaller coral shoals. (United Kingdom Hydrographic Office – UKHO – The Mariners Handbook).

21) **wadi**

IHO Definition: A watercourse that is permanently dry or dry except for the rainy season. (IHO Dictionary – S-32).

Remarks:

- The attribute **category of land region** encodes general terms for describing landscapes.

## 27.53 category of landmark (CATLMK)

IHO Definition: **CATEGORY OF LANDMARK.** Classification of prominent cultural and natural features in the landscape.

Attribute Type: Enumeration

1) **cairn**

IHO Definition: A mound of stones, usually conical or pyramidal, raised as a landmark or to designate a point of importance in surveying. (IHO Dictionary – S-32).

2) **cemetery**

IHO Definition: A site and associated structures devoted to the burial of the dead. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **chimney**

IHO Definition: A vertical structure containing a passage or flue for discharging smoke and gases of combustion. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **dish aerial**

IHO Definition: A parabolic aerial for the receipt and transmission of high frequency radio signals. (IHO Dictionary – S-32).

5) **flagstaff**

IHO Definition: A staff or pole on which flags are raised. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **flare stack**

IHO Definition: A tall structure used for burning-off waste oil or gas. (IHO Dictionary – S-32).

7) **mast**

IHO Definition: A relatively tall structure usually held vertical by guy lines.

8) **windsock**

IHO Definition: A tapered fabric sleeve mounted so as to catch and swing with the wind, thus indicating the wind direction. (Navigation Dictionary, US National Oceanic and Atmospheric Administration – NOAA, 1969).

9) **monument**

IHO Definition: A structure erected and/or maintained as a memorial to a person and/or event. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

10) **column/pillar**

IHO Definition: A cylindrical or slightly tapering body of considerably greater length than diameter erected vertically. (Oxford English Dictionary).

11) **memorial plaque**

IHO Definition: A slab of metal, usually ornamented, erected as a memorial to a person or event. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.46, November 2000).

12) **obelisk**

IHO Definition: A tapering shaft usually of stone or concrete, square or rectangular in section, with a pyramidal apex. (Adapted from Oxford English Dictionary).

**13) statue**

IHO Definition: A representation of a living being, sculptured, moulded, or cast in a variety of materials (for example: marble, metal, or plaster). (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**14) cross**

IHO Definition: A monument, or other structure in form of a cross. (Funk & Wagnalls Dictionary).

**15) dome**

IHO Definition: A landmark comprising a hemispherical or spheroidal shaped structure. (Adapted from the Macquarie Dictionary).

**16) radar scanner**

IHO Definition: A device used for directing a radar beam through a search pattern. (Adapted from Navigation Dictionary, US National Oceanic and Atmospheric Administration – NOAA, 1969).

**17) tower**

IHO Definition: A relatively tall, narrow structure that may either stand alone or may form part of another structure. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**18) windmill**

IHO Definition: A system of vanes attached to a tower and driven by wind (excluding wind turbines). (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**20) spire/minaret**

IHO Definition: A tall conical or pyramid-shaped structure often built on the roof or tower of a building, especially a church or mosque. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**21) large rock or boulder on land**

IHO Definition: An isolated rocky formation or a single large stone. (Adapted from IHO Dictionary – S-32).

**22) triangulation mark**

IHO Definition: A recoverable point on the earth, whose geographic position has been determined by angular methods with geodetic instruments. A triangulation point is a selected point, which has been marked with a station mark, or it is a conspicuous natural or artificial feature. (IHO Dictionary – S-32).

**23) boundary mark**

IHO Definition: A marker identifying the location of a surveyed boundary line. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**24) observation wheel**

IHO Definition: Wheels with passenger cars mounted external to the rim and independently rotated by electric motors. (Wikipedia, 2019).

**25) torii**

IHO Definition: A form of decorative gateway or portal, consisting of two upright wooden posts connected at the top by two horizontal crosspieces, commonly found at the entrance to Shinto temples.

**26) bridge**

IHO Definition: A structure erected over a depression or an obstacle such as a body of water, railroad, etc., to provide a roadway for vehicles or pedestrians. (IHO Dictionary – S-32).

**27) dam**

IHO Definition: A barrier to check or confine anything in motion; particularly one constructed to hold back water and raise its level to form a reservoir, or to prevent flooding. (IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.54 category of lateral mark (CATLAM)

**IHO Definition:** **CATEGORY OF LATERAL MARK.** Classification of lateral marks in the IALA Buoyage System.

**Attribute Type:** Enumeration

1) **port-hand lateral mark**

**IHO Definition:** Indicates the port boundary of a navigational channel or suggested route when proceeding in the “conventional direction of buoyage”. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.47, November 2000).

2) **starboard-hand lateral mark**

**IHO Definition:** Indicates the starboard boundary of a navigational channel or suggested route when proceeding in the “conventional direction of buoyage”. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.47, November 2000).

3) **preferred channel to starboard lateral mark**

**IHO Definition:** At a point where a channel divides, when proceeding in the “conventional direction of buoyage”, the preferred channel (or primary route) is indicated by a modified port-hand lateral mark. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.47, November 2000).

4) **preferred channel to port lateral mark**

**IHO Definition:** At a point where a channel divides, when proceeding in the “conventional direction of buoyage”, the preferred channel (or primary route) is indicated by a modified starboard-hand lateral mark. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.47, November 2000).

5) **right-hand side of the waterway**

**IHO Definition:** Indicates the right-hand side of the inland waterway.

6) **left-hand side of the waterway**

**IHO Definition:** Indicates the left-hand side of the inland waterway.

7) **right-hand side of the channel**

**IHO Definition:** Indicates the right-hand side of a channel of an inland waterway.

8) **left-hand side of the channel**

**IHO Definition:** Indicates the left-hand side of a channel of an inland waterway.

9) **bifurcation of the waterway**

**IHO Definition:** Indicates a bifurcation of the inland waterway.

10) **bifurcation of the channel**

**IHO Definition:** Indicates a bifurcation of a channel of an inland waterway.

11) **channel near the right bank**

**IHO Definition:** Indicates that the channel is near the right bank.

12) **channel near the left bank**

**IHO Definition:** Indicates that the channel is near the left bank.

13) **channel cross-over to the right bank**

**IHO Definition:** Indicates that the channel crosses from the left to the right bank.

14) **channel cross-over to the left bank**

**IHO Definition:** Indicates that the channel crosses from the left to the left bank.

15) **danger point or obstacles at the right-hand side**

IHO Definition: Indicates a danger point or obstacles at the right-hand side.

16) **danger point or obstacles at the left-hand side**

IHO Definition: Indicates a danger point or obstacles at the left-hand side.

17) **turn off at the right-hand side**

IHO Definition: Indicates a turn off at the right-hand side.

18) **turn off at the left-hand side**

IHO Definition: Indicates a turn off at the left-hand side.

19) **junction at the right-hand side**

IHO Definition: Indicates a junction at the right-hand side.

20) **junction at the left-hand side**

IHO Definition: Indicates a junction at the left-hand side.

21) **harbour entry at the right-hand side**

IHO Definition: Indicates a harbour entry at the right-hand side.

22) **harbour entry at the left-hand side**

IHO Definition: Indicates a harbour entry at the left-hand side.

23) **bridge pier mark**

IHO Definition: Indicates a bridge pier in an inland waterway.

24) **entry from a lake to a narrower waterway, right bank**

IHO Definition: Indicates the right bank of the entry from a lake or a lake-like expansion to a section of the waterway which is narrower.

25) **entry from a lake to a narrower waterway, left bank**

IHO Definition: Indicates the left bank of the entry from a lake or a lake-like expansion to a section of the waterway which is narrower.

26) **change bank**

IHO Definition: Change bank.

27) **continue along bank**

IHO Definition: Continue along bank.

Remarks:

- There are two international buoyage regions, A and B, between which lateral marks differ. The buoyage region is encoded using the separate attribute **marks navigational – system of** (see clause 27.170). When lights are fitted to these marks, they are encoded as separate features.
- At sea the “conventional direction of buoyage” may be either the general direction taken by the boatmaster when approaching a harbour, river, estuary or other waterway from seaward, or the direction determined by the proper authority, which in principle follows a clockwise direction around land masses.

## 27.55 category of light (CATLIT)

IHO Definition: **CATEGORY OF LIGHT.** Classification of different light types.

Attribute Type: Enumeration

4) **leading light**

IHO Definition: A light associated with other lights so as to form a leading line to be followed. (Adapted from IHO Dictionary – S-32).

5) **aero light**

IHO Definition: An aero light is established for aeronautical navigation and may be of higher power than marine lights and visible from well offshore. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.48, November 2000).

8) **flood light**

IHO Definition: A broad beam light used to illuminate a structure or area. (Adapted from The Collins Dictionary).

9) **strip light**

IHO Definition: A light whose source has a linear form generally horizontal, which can reach a length of several metres. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.48, November 2000).

10) **subsidiary light**

IHO Definition: A light placed on or near the support of a main light and having a special use in navigation. (Admiralty List of Radio Signals, UK Hydrographic Office).

11) **spotlight**

IHO Definition: A powerful light focused so as to illuminate a small area. (The Collins Dictionary).

12) **front**

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

13) **rear**

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

14) **lower**

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

15) **upper**

IHO Definition: Term used with leading lights to describe the position of the light on the lead as viewed from seaward. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

17) **emergency**

IHO Definition: A light available as a backup to a main light which will be illuminated should the main light fail. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

18) **bearing light**

IHO Definition: A light which enables its approximate bearing to be obtained without the use of a compass. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

19) **horizontally disposed**

IHO Definition: A group of lights of identical character and almost identical position, that are disposed horizontally. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

20) **vertically disposed**

IHO Definition: A group of lights of identical character and almost identical position, that are disposed vertically. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

Remarks:

No remarks

## 27.56 category of marine farm/culture (CATMFA)

IHO Definition: **CATEGORY OF MARINE FARM/CULTURE.** Classification of an area of water devoted to the raising, breeding, or production of a specific aquatic animal.

Attribute Type: Enumeration

1) **crustaceans**

IHO Definition: Hard shelled animals, for example crabs or lobsters. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.50, November 2000).

2) **edible bivalve molluscs**

IHO Definition: A two-part hinged external shell covering that contains a soft-bodied invertebrate. (Adapted from NOAA National Ocean Service).

3) **fish**

IHO Definition: Vertebrate cold blooded animal with gills, living in water. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.50, November 2000).

4) **seaweed**

IHO Definition: The general name for marine plants of the Algae class which grow in long narrow ribbons. (International Maritime Dictionary, 2<sup>nd</sup> Ed.).

5) **pearl culture farm**

IHO Definition: An area where pearls are artificially cultivated. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.50, November 2000).

Remarks:

No remarks.

## 27.57 category of military practice area (CATMPA)

IHO Definition: **CATEGORY OF MILITARY PRACTICE AREA.** Classification of area by military use.

Attribute Type: Enumeration

2) **torpedo exercise area**

IHO Definition: An area within which exercises are carried out with torpedoes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.52, November 2000).

3) **submarine exercise area**

IHO Definition: An area within which submarine exercises are carried out. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.52, November 2000).

4) **firing danger area**

IHO Definition: Areas for bombing and missile exercises. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.52, November 2000).

5) **mine-laying practice area**

IHO Definition: An area within which mine laying exercises are carried out. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.52, November 2000).

6) **small arms firing range**

IHO Definition: An area for shooting pistols, rifles and machine guns etc. at a target. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.52, November 2000).

Remarks:

No remarks.

## 27.58 category of mooring area

IHO Definition: **CATEGORY OF MOORING AREA.** Classification of an area in which vessels may be secured to mooring buoys. (Adapted from IHO dictionary – S-32).

Attribute Type: Enumeration

### 1) **small craft mooring area**

IHO Definition: An area in which yachts and small boats moor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.11, November 2000).

### 2) **mooring area for visitors**

IHO Definition: An area set aside for the mooring of visiting vessels. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

### 3) **mooring area for tankers**

IHO Definition: An area set aside for the mooring of tankers. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

Remarks:

No remarks.

## 27.59 category of navigation line (CATNAV)

IHO Definition: **CATEGORY OF NAVIGATION LINE.** Classification of route guidance given to vessels.

Attribute Type: Enumeration

### 1) **clearing line**

IHO Definition: A straight line that marks the boundary between a safe and a dangerous area or that passes clear of a navigational danger. (Adapted from IHO Dictionary, S-32).

### 2) **transit line**

IHO Definition: A line passing through one or more fixed marks. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.55, November 2000).

### 3) **leading line bearing a recommended track**

IHO Definition: A line passing through one or more clearly defined objects, along the path of which a vessel can approach safely up to a certain distance off. (Adapted from IHO Dictionary, S-32).

Remarks:

No remarks.

## 27.60 category of notice mark (catnmk)

IHO Definition: Category of notice mark.

### 1) **(A.1) No Entry (General Sign)**

IHO Definition: Prohibition mark A.1: No entry.

### 2) **(A.1.1) Sections Closed to Use, No Entry Except for Non-Motorized Small Craft**

IHO Definition: Sections closed to use, no entry except for non-motorized small craft.

### 3) **(A.2) No Overtaking**

IHO Definition: Prohibition mark A.2: No overtaking.

### 4) **(A.3) No Overtaking of Convoys by Convoys**

IHO Definition: Prohibition mark A.3: No overtaking of convoys by convoys.

**5) (A.4) No Passing or Overtaking**

IHO Definition: Prohibition mark A.4: No passing or overtaking.

**6) (A.5) No Berthing on the Side of the Waterway on Which the Sign is Placed**

IHO Definition: Prohibition mark A.5: No berthing (i.e. no anchoring or making fast to the bank) on the side of the waterway on which the sign is placed.

**7) (A.5.1) No Berthing on the Stretch of Water Whose Breadth, Measured from the Sign, is Shown in Metres on the Sign**

IHO Definition: Prohibition mark A.5.1: No berthing on the stretch of water whose breadth, measured from the sign, is shown in metres on the sign.

**8) (A.6) No Anchoring or Trailing of Anchors, Cables or Chains**

IHO Definition: Prohibition mark A.6: No anchoring or trailing of anchors, cables or chains on the side of the waterway on which the sign is placed.

**9) (A.7) No Making Fast to the Bank**

IHO Definition: Prohibition mark A.7: No making fast to the bank on the side of the waterway on which the sign is placed.

**10) (A.8) No Turning**

IHO Definition: Prohibition mark A.8: No turning.

**11) (A.9) Do Not Create Wash**

IHO Definition: Prohibition mark A.9: Do not create wash likely to cause damage.

**12) (A.10) No Passing on Left Side (In Openings of Bridges or Weirs)**

IHO Definition: Prohibition mark A.10: No passing on the left side outside the area marked (in openings of bridges or weirs).

**13) (A.10) No Passing on Right Side (In Openings of Bridges or Weirs)**

IHO Definition: Prohibition mark A.10: No passing on the right side (in openings of bridges or weirs).

**14) (A.12) Motorized Craft Prohibited**

IHO Definition: Prohibition mark A.12: Motorized craft prohibited.

**15) (A.13) Sports and Pleasure Craft Prohibited**

IHO Definition: Prohibition mark A.13: Sports and pleasure craft prohibited.

**16) (A.14) Water Skiing Prohibited**

IHO Definition: Prohibition mark A.14: Water skiing prohibited.

**17) (A.15) Sailing Vessels Prohibited**

IHO Definition: Prohibition mark A.15: Sailing vessels prohibited.

**18) (A.16) All Craft Other Than Motorized Vessels or Sailing Craft Prohibited**

IHO Definition: Prohibition mark A.16: All craft other than motorized vessels or sailing craft prohibited.

**19) (A.17) Use of Sailboards Prohibited**

IHO Definition: Prohibition mark A.17: Use of sailboards prohibited.

**20) (A.20) Water Bikes Prohibited**

IHO Definition: Prohibition mark A.20: Water bikes prohibited.

**21) (A.18) End of Zone Authorized for High Speed Navigation of Small Sport and Pleasure Craft**

IHO Definition: Prohibition mark A.18: End of zone authorized for high speed navigation of small sport and pleasure craft.

**22) (A.19) No Launching or Beaching of Vessels**

IHO Definition: Prohibition mark A.19: No launching or beaching of vessels.

**23) (B.1) Proceed in Left Direction**

IHO Definition: Regulation mark B.1: Proceed in the left direction as shown by the arrow.

**24) (B.1) Proceed in Right Direction**

IHO Definition: Regulation mark B.1: Proceed in the right direction as shown by the arrow.

**25) (B.2a) Move to the Side of the Fairway on Your Port Side**

IHO Definition: Regulation mark B.2a: Move to the side of the fairway on your port side.

**26) (B.2b) Move to the Side of the Fairway on Your Starboard Side**

IHO Definition: Regulation mark B.2b: Move to the side of the fairway on your starboard side.

**27) (B.3a) Keep on the Side of the Fairway on Your Port Side**

IHO Definition: Regulation mark B.3a: Keep to the side of the fairway on your port side.

**28) (B.3b) Keep on the Side of the Fairway on Your Starboard Side**

IHO Definition: Regulation mark B.3b: Keep to the side of the fairway on your starboard side.

**29) (B.4a) Cross Fairway to Port**

IHO Definition: Regulation mark B.4a: Cross fairway to port.

**30) (B.4b) Cross Fairway to Starboard**

IHO Definition: Regulation mark B.4b: Cross fairway to starboard.

**31) (B.5) Stop as Prescribed in the Regulations**

IHO Definition: Regulation mark B.5: Stop as prescribed in the regulations.

**32) (B.6) Do Not Exceed the Speed Indicated (in km/h)**

IHO Definition: Regulation mark B.6: Do not exceed the speed indicated (in km/h).

**33) (B.7) Give a Sound Signal**

IHO Definition: Regulation mark B.7: Give a sound signal.

**34) (B.8) Keep a Particularly Sharp Lookout**

IHO Definition: Regulation mark B.8: Keep a particularly sharp lookout.

**35) (B.9a) Do Not Enter the Main Waterway Until Certain that This Will Not Oblige Vessels Proceeding On It to Change their Course or Speed**

IHO Definition: Regulation mark B.9a: Do not enter the main waterway until certain that this will not oblige vessels proceeding on it to change their course or speed.

**36) (B.9b) Do Not Cross the Main Waterway Until Certain that This Will Not Oblige Vessels Proceeding On It to Change their Course or Speed**

IHO Definition: Regulation mark B.9b: Do not cross the main waterway until certain that this will not oblige vessels proceeding on it to change their course or speed.

**37) (B.11) Obligation to Enter Into a Radiotelephone Link on the Channel as Indicated on the Board**

IHO Definition: Regulation mark B.11: Obligation to enter into a radiotelephone link on the channel as indicated on the board.

**38) (C.1) Depth of Water Limited**

IHO Definition: Restriction mark C.1: Depth of water limited.

**39) (C.2) Headroom Limited**

IHO Definition: Restriction mark C.2: Headroom limited.

**40) (C.3) Width of Passage or Channel Limited**

IHO Definition: Restriction mark C.3: Width of passage or channel limited.

**41) (C.4) There Are Restrictions on Navigation**

IHO Definition: Restriction mark C.4: There are restrictions on navigation: See the information plate below the main sign.

**42) (C.5) The Channel Lies at a Distance From the Left Bank**

IHO Definition: Restriction mark C.5: The channel lies at a distance from the left bank; the figure shown on the sign indicates the distance in metres, measured from the sign, to which vessels should keep.

**43) (C.5) The Channel Lies at a Distance From the Right Bank**

IHO Definition: Restriction mark C.5: The channel lies at a distance from the right bank; the figure shown on the sign indicates the distance in metres, measured from the sign, to which vessels should keep.

**44) (D.1a) Recommended Channel in Both Directions**

IHO Definition: Recommendation mark D.1a: Recommended channel in both directions.

**45) (D.1b) Recommended Channel Only in the Direction Indicated, Passage in the Opposite Direction Prohibited (at Bridges)**

IHO Definition: Recommendation mark D.1b: Recommended channel only in the direction indicated, passage in the opposite direction prohibited (at bridges).

**46) (D.2) You are Recommended to Keep on Right Side (in Openings of Bridges and Weirs)**

IHO Definition: Recommendation mark D.2: You are recommended to keep on right side (in openings of bridges and weirs).

**47) (D.2) You are Recommended to Keep on Left Side (in Openings of Bridges and Weirs)**

IHO Definition: Recommendation mark D.2: You are recommended to keep on left side (in openings of bridges and weirs).

**48) (D.3) You Are Recommended to Proceed in the Left Direction**

IHO Definition: Recommendation mark D.3: You are recommended to proceed in the left direction.

**49) (D.3) You Are Recommended to Proceed in the Right Direction**

IHO Definition: Recommendation mark D.3: You are recommended to proceed in the right direction.

**50) (E.1) Entry Permitted (General Sign)**

IHO Definition: Information mark E.1: Entry permitted (general sign).

**51) (E.2) Overhead Cable Crossing**

IHO Definition: Information mark E.2: Overhead cable crossing.

**52) (E.3) Weir**

IHO Definition: Information mark E.3: Weir.

**53) (E.4a) Ferry-Boat Not Moving Independently**

IHO Definition: Information mark E.4a: Ferry-boat not moving independently.

**54) (E.4b) Ferry-Boat Moving Independently**

IHO Definition: Information mark E.4b: Ferry-boat moving independently.

**55) (E.5) Berthing (that is Anchoring or Making Fast to the Bank) Permitted**

IHO Definition: Information mark E.5: Berthing (i.e. anchoring or making fast to the bank) permitted.

**56) (E.5.1) Berthing Permitted on the Stretch of Water of the Breadth Measured From, and Shown on the Board in Metres**

IHO Definition: Information mark E.5.1: Berthing permitted on the stretch of water of the breadth measured from, and shown on the board in metres.

**57) (E.5.2) Berthing Permitted on the Stretch of Water Bounded by the Distances Measured From, and Shown on the Board in Metres**

IHO Definition: Information mark E.5.2: Berthing permitted on the stretch of water bounded by the distances measured from, and shown on the board in metres.

**58) (E.5.3) Maximum Number of Vessels Permitted to Berth Abreast**

IHO Definition: Information mark E.5.3: Maximum number of vessels permitted to berth abreast on the side of the waterway on which the sign is placed.

**59) (E.5.4) Berthing Area Reserved for Pushing-Navigation Vessels that are Not Required to Carry Blue Lights or Blue Cones**

IHO Definition: Information mark E.5.4: Berthing area reserved for pushing-navigation vessels that are not required to carry the marking prescribed in article 3.14 on the side of the waterway on which the sign is placed.

**60) (E.5.5) Berthing Area Reserved for Pushing-Navigation Vessels that are Required to Carry One Blue Light or One Blue Cone**

IHO Definition: Information mark E.5.5: Berthing area reserved for pushing-navigation vessels that are required to carry one blue light or one blue cone under article 3.14, paragraph 1, on the side of the waterway on which the sign is placed.

**61) (E.5.6) Berthing Area Reserved for Pushing-Navigation Vessels that are Required to Carry Two Blue Lights or Two Blue Cones**

IHO Definition: Information mark E.5.6: Berthing area reserved for pushing-navigation vessels that are required to carry two blue lights or two blue cones under article 3.14, paragraph 2, on the side of the waterway on which the sign is placed.

**62) (E.5.7) Berthing Area Reserved for Pushing-Navigation Vessels that are Required to Carry Three Blue Lights or Three Blue Cones**

IHO Definition: Information mark E.5.7: Berthing area reserved for pushing-navigation vessels that are required to carry three blue lights or three blue cones under article 3.14, paragraph 3, on the side of the waterway on which the sign is placed.

**63) (E.5.8) Berthing Area Reserved for Vessels Other Than Pushing-Navigation Vessels that are Not Required to Carry Blue Lights or Blue Cones**

IHO Definition: Information mark E.5.8: Berthing area reserved for vessels other than pushing-navigation vessels that are not required to carry the marking prescribed in article 3.14 on the side of the waterway on which the sign is placed.

**64) (E.5.9) Berthing Area Reserved for Vessels Other Than Pushing-Navigation Vessels that are Required to Carry One Blue Light or One Blue Cone**

IHO Definition: Information mark E.5.9: Berthing area reserved for vessels other than pushing-navigation vessels that are required to carry one blue light or one blue cone under article 3.14, paragraph 1, on the side of the waterway on which the sign is placed.

**65) (E.5.10) Berthing Area Reserved for Vessels Other Than Pushing-Navigation Vessels that are Required to Carry Two Blue Lights or Two Blue Cones**

IHO Definition: Information mark E.5.10: Berthing area reserved for vessels other than pushing-navigation vessels that are required to carry two blue lights or two blue cones under article 3.14, paragraph 2, on the side of the waterway on which the sign is placed.

**66) (E.5.11) Berthing Area Reserved for Vessels Other Than Pushing-Navigation Vessels that are Required to Carry Three Blue Lights or Three Blue Cones**

IHO Definition: Information mark E.5.11: Berthing area reserved for vessels other than pushing-navigation vessels that are required to carry three blue lights or three blue cones under article 3.14, paragraph 3, on the side of the waterway on which the sign is placed.

**67) (E.5.12) Berthing Area Reserved for All Vessels that are Not Required to Carry Blue Lights or Blue Cones**

IHO Definition: Information mark E.5.12: Berthing area reserved for all vessels that are not required to carry the marking prescribed in article 3.14, on the side of the waterway on which the sign is placed.

**68) (E.5.13) Berthing Area Reserved for All Vessels that are Required to Carry One Blue Light or One Blue Cone**

IHO Definition: Information mark E.5.13: Berthing area reserved for all vessels that are required to carry one blue light or one blue cone under article 3.14, paragraph 1, on the side of the waterway on which the sign is placed.

**69) (E.5.14) Berthing Area Reserved for All Vessels that are Required to Carry Two Blue Lights or Two Blue Cones**

IHO Definition: Information mark E.5.14: Berthing area reserved for all vessels that are required to carry two blue lights or two blue cones on the side of the waterway on which the sign is placed.

**70) (E.5.15) Berthing Area Reserved for All Vessels that are Required to Carry Three Blue Lights or Three Blue Cones**

IHO Definition: Information mark E.5.15: Berthing area reserved for all vessels that are required to carry three blue lights or three blue cones under article 3.14, paragraph 3, on the side of the waterway on which the sign is placed.

**71) (E.6) Anchoring or Trailing of Anchors, Cables or Chains Permitted**

IHO Definition: Information mark E.6: Anchoring (see article 7.03, para. 2) or trailing of anchors, cables or chains permitted on the side of the waterway on which the sign is placed.

**72) (E.7) Making Fast to the Bank Permitted**

IHO Definition: Information mark E.7: Making fast to the bank permitted on the side of the waterway on which the sign is placed.

**73) (E.7.1) Berthing Area Reserved for Loading and Unloading of Vehicles**

IHO Definition: Information mark E.7.1: Berthing area reserved for loading and unloading vehicles. (Maximum duration of berthing permitted may be added on an information plate below the board).

**74) (E.8) Turning Area**

IHO Definition: Information mark E.8: Turning area.

**75) (E.9a) Crossing With Secondary Waterway Ahead**

IHO Definition: Information mark E.9a: Crossing with secondary waterway ahead.

**76) (E.9b) Secondary Waterway Ahead on the Right**

IHO Definition: Information mark E.9b: Secondary waterway ahead on the right.

**77) (E.9c) Secondary Waterway Ahead on the Left**

IHO Definition: Information mark E.9c: Secondary waterway ahead on the left.

**78) (E.9d) Secondary Waterway Ahead, Main Waterway on the Right**

IHO Definition: Information mark E.9d: Secondary waterway ahead, main waterway on the right.

**79) (E.9e) Secondary Waterway Ahead, Main Waterway on the Left**

IHO Definition: Information mark E.9e: Secondary waterway ahead, main waterway on the left.

**80) (E.9f) Secondary Waterway on the Left, Main Waterway on the Right**

IHO Definition: Information mark E.9f: Secondary waterway on the left, main waterway on the right.

**81) (E.9g) Secondary Waterway on the Right, Main Waterway on the Left**

IHO Definition: Information mark E.9g: Secondary waterway on the right, main waterway on the left.

**82) (E.9h) Secondary Waterway Ahead and on the Left, Main Waterway on the Right**

IHO Definition: Information mark E.9h: Secondary waterway ahead and on the left, main waterway on the right.

**83) (E.9i) Secondary Waterway Ahead and on the Right, Main Waterway on the Left**

IHO Definition: Information mark E.9i: Secondary waterway ahead and on the right, main waterway on the left.

**84) (E.10a) Crossing with Main Waterway Ahead**

IHO Definition: Information mark E.10a: Crossing with main waterway ahead.

**85) (E.10b) Main Waterway Ahead**

IHO Definition: Information mark E.10b: Main waterway ahead.

**86) (E.10c) Junction with Main Waterway Ahead and Right**

IHO Definition: Information mark E.10c: Junction with main waterway ahead and right.

**87) (E.10d) Junction with Main Waterway Ahead and Left**

IHO Definition: Information mark E.10d: Junction with main waterway ahead and left.

**88) (E.10e) Junction with Main Waterway Ahead and Right, Secondary Waterway on the Left**

IHO Definition: Information mark E.10e: Junction with main waterway ahead and right, secondary waterway on the left.

**89) (E.10f) Junction with Main Waterway Ahead and Left, Secondary Waterway on the Right**

IHO Definition: Information mark E.10f: Junction with main waterway ahead and left, secondary waterway on the right.

**90) (E.11) End of Prohibition or Obligation Applying to Traffic in One Direction Only, or End of a Restriction**

IHO Definition: Information mark E.11: End of prohibition or obligation applying to traffic in one direction only, or end of a restriction.

**91) (E.13) Drinking Water Supply**

IHO Definition: Information mark E.13: Drinking water supply.

**92) (E.14) Telephone**

IHO Definition: Information mark E.14: Telephone.

**93) (E.15) Motorized Vessels Permitted**

IHO Definition: Information mark E.15: Motorized vessels permitted.

**94) (E.16) Sport and Pleasure Craft Permitted**

IHO Definition: Information mark E.16: Sport and pleasure craft permitted.

**95) (E.17) Water Skiing Permitted**

IHO Definition: Information mark E.17: Water skiing permitted.

**96) (E.18) Sailing Vessels Permitted**

IHO Definition: Information mark E.18: Sailing vessels permitted.

**97) (E.19) Craft Other Than Motorized Vessels or Sailing Craft Permitted**

IHO Definition: Information mark E.19: Craft other than motorized vessels or sailing craft permitted.

**98) (E.20) Use of Sailboards Permitted**

IHO Definition: Information mark E.20: Use of sailboards permitted.

**99) (E.23) Possibility of Obtaining Nautical Information by Radiotelephone on the Channel Indicated**

IHO Definition: Information mark E.23: Possibility of obtaining nautical information by radiotelephone on the channel indicated.

**100) (E.24) Water Bikes Permitted**

IHO Definition: Information mark E.24: Water bikes permitted.

**101) (E.21) Zone Authorized for High Speed Navigation of Small Sport and Pleasure Craft**

IHO Definition: Information mark E.21: Zone authorized for high speed navigation of small sport and pleasure craft.

**102) (E.22) Launching or Beaching of Vessels Permitted**

IHO Definition: Information mark E.22: Launching or beaching of small craft permitted.

**103) (BR) Proceed Close to the Margin on Your Port Side**

IHO Definition: Regulation mark (BR): Proceed close to margin on your port side.

**104) (BR) Proceed Close to the Margin on Your Starboard Side**

IHO Definition: Regulation mark (BR): Proceed close to margin on your starboard side.

**105) (BR) Proceed in the Middle of the River**

IHO Definition: Regulation mark (BR): Proceed in the middle of the river.

**106) (BR) Cross River to Port**

IHO Definition: Regulation mark (BR): Cross river to port.

**107) (BR) Cross River to Starboard**

IHO Definition: Regulation mark (BR): Cross river to starboard.

**108) (BR) Traffic Between Margins**

IHO Definition: Information mark (BR): Traffic between margins.

**109) (BR) Reduce Speed**

IHO Definition: Regulation mark (BR): Reduce speed.

**110) Wreck Pontoon, Passage Allowed on Side Showing Red-White Sign**

IHO Definition: A red-white sign shown on a wreck pontoon to indicate the side on which passage is permitted (without wash of waves) and a red sign on the side on which passage is not permitted.

**111) Wreck Pontoon, Passage Allowed on Both Sides**

IHO Definition: Red-white signs shown on a wreck pontoon to indicate that passage is permitted on both sides (without wash of waves).

**112) No Passing or Overtaking of Convoys**

IHO Definition: Russian notice mark: 1.2, no passing or overtaking of convoys

**113) Small Crafts Prohibited**

IHO Definition: Russian notice mark: 1.5, small crafts prohibited.

**114) Attention! (Keep Caution)**

IHO Definition: Russian notice mark: 2.1, Attention! (keep caution)

**115) Fairway Crossing**

IHO Definition: Russian notice mark: 2.2, fairway crossing.

**116) Shipping Inspection Point**

IHO Definition: Russian notice mark: 3.3, shipping inspection point.

**117) (E.25) Electrical Power Supply Point**

IHO Definition: Information mark E.25: Electrical power supply point.

**118) (E.26) Winter Harbour**

IHO Definition: Information mark E.26: Winter harbour.

**119) (E.26.1) Maximum Number of Vessels Permitted to Berth in Winter Harbour**

IHO Definition: Information mark E.26.1: maximum number of vessels permitted to berth in winter harbour.

120) **(E.27) Winter Shelter**

IHO Definition: Information mark E.27: Winter shelter.

121) **(E.27.1) Maximum Number of Vessels Permitted to Berth in Winter Shelter; Maximum Number of Vessels Permitted to Berth Abreast; Maximum Number of Rows of Vessels Which are Berthed Abreast**

IHO Definition: Information mark E.27.1: Maximum number of vessels permitted to berth in winter shelter; maximum number of vessels permitted to berth abreast; maximum number of rows of vessels which are berthed abreast.

122) **(E.6.1) Use of Spuds Permitted**

IHO Definition: Information mark E.6.1: Use of spuds permitted.

123) **(B.12) Obligation to Use Onshore Power Supply Point**

IHO Definition: Regulation mark B.12: Obligation to use onshore power supply point.

124) **(BR) Right Pillar In Passage For Tiete-Parana Waterway**

IHO Definition: Regulation mark (BR): Right pillar in passage for Tiete-Parana Waterway (at bridges)

125) **(BR) Left Pillar In Passage For Tiete-Parana Waterway**

IHO Definition: Regulation mark (BR): Left pillar in passage for Tiete-Parana Waterway

126) **(BR) Best Transit Point**

IHO Definition: Information mark (BR): Best Transit Point

127) **(BR) Mandatory Stopping Point for Tiete-Parana Waterway**

IHO Definition: Regulation mark (BR): Mandatory Stopping Point for Tiete-Parana Waterway

128) **(A.4.1) No Passing or Overtaking of Convoys by Convoys**

IHO Definition: Prohibition Mark A.4.1: No passing or overtaking by convoys

Remarks:

No remarks.

## 27.61 category of obstruction (CATOBS)

IHO Definition: **CATEGORY OF OBSTRUCTION.** Classification of objects that impede movement.

Attribute Type: Enumeration

1) **snag/stump**

IHO Definition: A tree, branch or broken pile embedded in the ocean floor, river or lake bottom and not visible on the surface, forming thereby a hazard to vessels. (IHO Dictionary – S-32).

2) **wellhead**

IHO Definition: A submarine structure projecting some distance above the seabed and capping a temporarily abandoned or suspended oil or gas well. (IHO Dictionary – S-32).

3) **diffuser**

IHO Definition: A structure on an outfall through which liquids are discharged. The structure will usually project above the level of the outfall and can be an obstruction to navigation. (IHO Dictionary – S-32).

4) **crib**

IHO Definition: A permanent marine structure usually designed to support or elevate pipelines; especially a structure enclosing a screening device at the offshore end of a potable water intake pipe. The structure is

commonly a heavy timber enclosure that has been sunken with rocks or other debris. (IHO Dictionary – S-32).

5) **fish haven**

IHO Definition: Areas established by private interests, usually sport fishermen, to simulate natural reefs and wrecks that attract fish. The reefs are constructed by dumping assorted junk in areas which may be of very small extent or may stretch a considerable distance along a depth contour. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.56, November 2000).

6) **foul area**

IHO Definition: An area of numerous unidentified dangers to navigation. The area serves as a warning to the mariner that all dangers are not identified individually and that navigation through the area may be hazardous. (IHO Dictionary – S-32).

8) **ice boom**

IHO Definition: Floating barriers, anchored to the bottom, used to deflect the path of floating ice in order to prevent the obstruction of locks, intakes, etc., and to prevent damage to bridge piers and other structures. (Canadian Hydrographic Service, Chart specifications).

9) **ground tackle**

IHO Definition: Equipment such as anchors, concrete blocks, chains and cables, etc., used to position floating structures such as trot and mooring buoys etc. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.57, November 2000).

10) **boom**

IHO Definition: A floating barrier used to protect a river or harbour mouth or to create a sheltered area for storage purposes. (IHO Dictionary – S-32).

11) **fishing net**

A piece of open-meshed material made of twine, cord, or something similar, used for catching fish.

12) **wave energy device**

IHO Definition: A device to extract energy from the surface motion of ocean waves or from pressure fluctuations below the surface.

13) **subsurface ocean data acquisition system**

IHO Definition: A submerged device, not being a ship, together with its appurtenant equipment, deployed at sea essentially for the purpose of collecting, storing or transmitting samples or data relating to the marine environment. (Adapted from Wikipedia, 2018).

14) **artificial reef**

IHO Definition: A man-made structure that may mimic some of the characteristics of a natural reef, intended to attract sea life. (Adapted from NOAA National Ocean Service).

15) **template**

IHO Definition: A structure placed on the seafloor below a drilling rig to guide the drill. (Adapted from IHO Chart Specifications, S-4).

16) **manifold**

IHO Definition: A large steel structure up to 20 metres in height above the seafloor, or a steel frame secured to the seafloor with piles to anchor the end of a submarine pipeline, for delivery to a production platform. (Adapted from IHO Chart Specifications, S-4).

17) **submerged pingo**

IHO Definition: A hill of soil-covered ice pushed up by hydrostatic pressure in an area of permafrost that is located underwater.

18) **remains of platform**

IHO Definition: The distributed remains of a platform.

**19) scientific instrument**

IHO Definition: An instrument used for scientific purposes.

**20) underwater turbine**

IHO Definition: Any of various machines having a rotor, usually with vanes or blades, driven by the pressure, momentum, or reactive thrust of a moving fluid, as steam, water, hot gases, or air, either occurring in the form of free jets or as a fluid passing through and entirely filling a housing around the rotor and is located underwater.

**21) active submarine volcano**

IHO Definition: An active seabed volcano, which may be submerged or projecting above the water at the chart sounding datum. (Adapted from IHO Dictionary – S-32).

**22) shark net**

IHO Definition: A submerged net placed around beaches to reduce shark attacks on swimmers. (Wikipedia).

**23) mangrove**

IHO Definition: One of several genera of tropical trees or shrubs which produce many prop roots and grow along low-lying coasts into shallow water. (IHO Dictionary – S-32).

Remarks:

No remarks.

**27.62 category of offshore platform (CATOFP)**

IHO Definition: **CATEGORY OF OFFSHORE PLATFORM.** Classification of an offshore raised structure.

Attribute Type: Enumeration

**1) oil rig**

IHO Definition: A temporary mobile structure, either fixed or floating, used in the exploration stages of oil and gas fields. (IHO Dictionary – S-32).

**2) production platform**

IHO Definition: A term used to indicate a permanent offshore structure equipped to control the flow of oil or gas. It does not include entirely submarine structures. (Adapted from IHO Dictionary – S-32).

**3) observation/research platform**

IHO Definition: A platform from which one's surroundings or events can be observed, noted or recorded such as for scientific study. (Adapted from IHO Dictionary – S-32, Edition 5).

**4) articulated loading platform**

IHO Definition: A metal lattice tower, buoyant at one end and attached at the other by a universal joint to a concrete filled base on the seabed. The platform may be fitted with a helicopter platform, emergency accommodation and hawser/hose retrieval. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

**5) single anchor leg mooring**

IHO Definition: A rigid frame or tube with a buoyancy device at its upper end, secured at its lower end to a universal joint on a large steel or concrete base resting on the seabed, and at its upper end to a mooring buoy by a chain or wire. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

**6) mooring tower**

IHO Definition: A platform secured to the seabed and surmounted by a turntable to which ships moor. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (12), May 1994).

**7) artificial island**

IHO Definition: A man-made structure usually built for the exploration or exploitation of marine resources, marine scientific research, tidal observations, etc. (Adapted from IHO Dictionary – S-32).

8) **floating production, storage and off-loading vessel**

IHO Definition: An offshore facility consisting of a moored tanker/barge by which the product is extracted, stored and exported. (Adapted from United Kingdom Hydrographic Office CSDO 607.2 (13), May 1994).

9) **accommodation platform**

IHO Definition: A platform used primarily for eating, sleeping and recreation purposes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.59, November 2000).

10) **navigation, communication and control buoy**

IHO Definition: A floating structure with control room, power and storage facilities, attached to the seabed by a flexible pipeline and cables. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.59, November 2000).

11) **floating oil tank**

IHO Definition: A floating structure, anchored to the seabed, for storing oil. (Adapted from IHO Hydrographic Dictionary – S-32).

Remarks:

No remarks.

## 27.63 category of offshore production area (CATPRA)

IHO Definition: **CATEGORY OF OFFSHORE PRODUCTION AREA.** Classification of an area at sea within which there are production facilities. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 1, Page 1.113, November 2000).

Attribute Type: Enumeration

1) **wind farm**

IHO Definition: A collection of wind turbines that are collocated and are organized as a single power generation unit. (IHO Dictionary – S-32).

2) **wave farm**

IHO Definition: A collection of collocated devices which harness wave energy and are organized as a single power generation unit. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **current farm**

IHO Definition: A collection of collocated devices which harness current (for example tidal) energy and are organized as a single power generation unit. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **tank farm**

IHO Definition: A collection of collocated large-capacity tanks in which petroleum, natural gas, or liquid petrochemicals are stored. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **seabed material extraction area**

IHO Definition: An area in which materials forming, or under, the seabed are removed.

6) **solar farm**

IHO Definition: A large-scale photovoltaic system (PV system) designed for the supply of merchant power into the electricity grid. They are differentiated from most building-mounted and other decentralised solar power applications because they supply power at the utility level, rather than to a local user or users. The generic expression utility-scale solar is sometimes used to describe this type of project. (Wikipedia).

Remarks:

No remarks.

## 27.64 category of oil barrier (CATOLB)

IHO Definition: **CATEGORY OF OIL BARRIER.** Classification of barriers used to prevent the unwanted spread of oil across the sea surface.

Attribute Type: Enumeration

### 1) oil retention (high pressure pipe)

IHO Definition: A pipe with holes from which air blows. When the air bubbles reach the surface they form a barrier which prevents the spread of oil. (Kort- og Matrikelstyrelsen, Denmark).

### 2) floating oil barrier

IHO Definition: A floating tube shaped structure, with a curtain (2 metre) hanging under it, below the surface, which prevents the spread of oil. (Kort- og Matrikelstyrelsen, Denmark).

Remarks:

No remarks.

## 27.65 category of opening bridge (CATBRG)

IHO Definition: **CATEGORY OF OPENING BRIDGE.** Classification of opening structures spanning and providing passage over a gap or barrier, such as a river or roadway.

Attribute Type: Enumeration

### 3) swing bridge

IHO Definition: A movable bridge (or span thereof) which rotates in a horizontal plane about a vertical pivot to allow the passage of vessels. (Adapted from IHO Dictionary – S-32).

### 4) lifting bridge

IHO Definition: A movable bridge (or span thereof) which is capable of being lifted vertically to allow vessels to pass beneath. (Adapted from IHO Dictionary – S-32).

### 5) bascule bridge

IHO Definition: A counterpoise bridge rotated in a vertical plane about an axis at one or both ends. (IHO Dictionary – S-32).

### 7) drawbridge

IHO Definition: A general name for bridges of which part or the entire span of the bridge may be raised or drawn aside to allow ships to pass through. (IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.66 category of pile (CATPLE)

IHO Definition: **CATEGORY OF PILE.** Classification of pile, driven into the earth as a foundation or support for a structure.

Attribute Type: Enumeration

### 1) stake

IHO Definition: An elongated wood or metal pole embedded in the seabed to serve as a marker or support. (Adapted from IHO Dictionary – S-32).

3) **post**

IHO Definition: A vertical piece of timber, metal or concrete forced into the earth or seabed. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

4) **tripodal**

IHO Definition: A single structure comprising 3 or more piles held together (sections of heavy timber, steel or concrete), and forced into the earth or seabed. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.61, November 2000).

5) **piling**

IHO Definition: A number of piles, usually in a straight line, and usually connected or bolted together. (Adapted from IHO Dictionary – S-32).

6) **area of piles**

IHO Definition: A number of piles, usually in a straight line, but not connected by structural members (Australian Hydrographic Office).

7) **pipe**

IHO Definition: A vertical hollow cylinder of metal, wood, or other material forced into the earth or seabed. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.61, November 2000).

8) **mooring post**

IHO Definition: A post where to which something (such as a craft) can be moored. (Adapted from Merriam-Webster Dictionary – 2023).

Remarks:

No remarks.

## 27.67 category of pilot boarding place (CATPIL)

IHO Definition: **CATEGORY OF PILOT BOARDING PLACE.** Classification of pilot boarding method.

Attribute Type: Enumeration

1) **boarding by pilot-cruising vessel**

IHO Definition: Pilot boards from a cruising vessel. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.62, November 2000).

2) **boarding by helicopter**

IHO Definition: Pilot boards by helicopter which comes out from the shore. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.62, November 2000)

3) **pilot comes out from shore**

IHO Definition: Pilot embarks from a vessel or disembarks to a vessel which comes out from the shore on request. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.62, November 2000).

Remarks:

No remarks.

## 27.68 category of pipeline/pipe (CATPIP)

IHO Definition: **CATEGORY OF PIPELINE/PIPE.** Classification of a pipe systems use.

Attribute Type: Enumeration

2) **outfall pipe**

IHO Definition: A pipe (generally a sewer or drainage pipe) discharging into the sea or a river. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **intake pipe**

IHO Definition: A pipe taking water from a river or other body of water, to drive a mill or supply a canal, waterworks, etc. (Adapted from IHO Dictionary – S-32).

4) **sewer**

IHO Definition: A pipe in a sewage system for carrying water or sewage to a disposal area. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **bubbler system**

IHO Definition: A submerged pipe from which warm water bubbles, preventing the surrounding water from freezing. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.63, November 2000).

6) **supply pipe**

IHO Definition: A pipe used for transport (supply) of gas or liquid product. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

7) **bubble curtain**

IHO Definition: A high pressure sub-surface pipeline (usually on the seafloor) with holes emitting a curtain of air bubbles. Its uses include: the prevention of acoustic transmission through the water; preventing the spread of surface debris or floating liquids; controlling the movement of fish. (IHO Chart Specifications, S-4).

Remarks:

No remarks.

## 27.69 category of plug

IHO Definition: The type of plug(s) available at the power supply station.

Attribute Type: Text

Remarks:

- up to 100 characters
- e.g. CEE or Powerlock

## 27.70 category of preference

IHO Definition: **CATEGORY OF PREFERENCE.** The selection of a first choice compared to other options.

Attribute Type: Enumeration

1) **primary**

IHO Definition: The preferred first choice used in normal conditions.

2) **alternate**

IHO Definition: The preferred choice in extraordinary conditions

Remarks:

No remarks.

## 27.71 category of production area (CATPRA)

IHO Definition: **CATEGORY OF PRODUCTION AREA.** Classification of an area set aside for heavy industry.

Attribute Type: Enumeration1) **quarry**

IHO Definition: An open-air excavation for the extraction of stone intended principally for use in construction. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **mine**

IHO Definition: An excavation made in the terrain for the purpose of extracting and/or exploiting natural resources. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **stockpile**

IHO Definition: A reserve stock of material, equipment or other supplies. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.64, November 2000).

4) **power station area**

IHO Definition: A facility including one or more buildings and equipment used for power generation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **refinery area**

IHO Definition: A facility where petroleum and/or petroleum products are refined. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **timber yard**

IHO Definition: An open tract for the storage of wooden lumber and timbers. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

7) **factory area**

IHO Definition: A group of buildings where goods are manufactured. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.64, November 2000).

8) **tank farm**

IHO Definition: A collection of collocated large-capacity tanks in which petroleum, natural gas, or liquid petrochemicals are stored. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

9) **wind farm**

IHO Definition: A collection of wind turbines that are collocated and are organized as a single power generation unit. (IHO Dictionary – S-32).

10) **slag heap/spoil heap**

IHO Definition: Hill of refuse from a mine, industrial plant etc. on land. (Adapted from Concise Oxford Dictionary).

11) **production plant**

IHO Definition: A plant where production takes place.

12) **solar farm**

IHO Definition: A large-scale photovoltaic system (PV system) designed for the supply of merchant power into the electricity grid. They are differentiated from most building-mounted and other decentralised solar power applications because they supply power at the utility level, rather than to a local user or users. The generic expression utility-scale solar is sometimes used to describe this type of project. (Wikipedia).

Remarks:

No remarks.

**27.72 category of pylon (CATPYL)**

IHO Definition: **CATEGORY OF PYLON.** Classification of the pylon based on the service it is supporting.

Attribute Type: Enumeration

1) **power transmission pylon/pole**

IHO Definition: A pylon or pole that supports one or more power lines. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **telephone/telegraph pylon/pole**

IHO Definition: A pylon or pole that supports one or more communication lines. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **aerial cableway pylon**

IHO Definition: A tower or pylon supporting steel cables which convey cars, buckets, or other suspended carrier units. (Adapted from Defence Geospatial Information Working Group; Feature and Attribute Coding Catalogue, Edition 1.2).

4) **bridge pylon/tower**

IHO Definition: A tower and/or pylon from which the deck of a bridge is suspended. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **bridge pier**

IHO Definition: A pillar or abutment that supports a bridge span. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

6) **pipeline pylon**

IHO Definition: A tower or pylon supporting a suspended pipeline or pipelines. (Adapted from Defence Geospatial Information Working Group; Feature and Attribute Coding Catalogue, Edition 1.2).

Remarks:

No remarks.

## 27.73 category of radar station (CATRAS)

IHO Definition: **CATEGORY OF RADAR STATION.** Classification of radar station based on the services offered.

Attribute Type: Enumeration

1) **radar surveillance station**

IHO Definition: A radar station established for traffic surveillance. (IHO Dictionary – S-32).

2) **coast radar station**

IHO Definition: A shore-based station which the mariner can contact by radio to obtain a position. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.68, November 2000).

Remarks:

No remarks.

## 27.74 category of radar transponder beacon (CATRTB)

IHO Definition: **CATEGORY OF RADAR TRANSPONDER BEACON.** Classification of radar transponder beacon based on functionality.

Attribute Type: Enumeration

1) **ramark, radar beacon transmitting continuously**

IHO Definition: A radar marker beacon which continuously transmits a signal appearing as a radial line on a radar screen, the line indicating the direction of the beacon. Ramarks are intended primarily for marine use. The name “ramark” is derived from the words radar marker. (IHO Dictionary – S-32).

**2) racon, radar transponder beacon**

IHO Definition: A radar beacon which returns a coded signal which provides identification of the beacon, as well as range and bearing. The range and bearing are indicated by the location of the first character received on the radar screen. The name “racon” is derived from the words radar beacon. (IHO Dictionary – S-32).

**3) leading racon/radar transponder beacon**

IHO Definition: A radar beacon that may be used (in conjunction with at least one other radar beacon) to indicate a leading line. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.69, November 2000).

Remarks:

No remarks.

**27.75 category of radio station (CATROS)**

IHO Definition: **CATEGORY OF RADIO STATION.** Classification of radio services offered by a radio station.

Attribute Type: Enumeration

**5) radio direction-finding station**

IHO Definition: A radio station intended to determine only the direction of other stations by means of transmission from the latter. (IHO Dictionary – S-32).

**10) differential GNSS**

IHO Definition: Differential GNSS is implemented by placing a GNSS monitor receiver at a precisely known location. Instead of computing a navigation fix, the monitor determines the range error to every GNSS satellite it can track. These ranging errors are then transmitted to local users where they are applied as corrections before computing the navigation result. (Adapted from IHO Dictionary – S-32).

**11) Toran**

IHO Definition: An electronic position fixing system used mainly by aircraft. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.71, November 2000).

**14) Chaika**

IHO Definition: A low frequency electronic position fixing system using pulsed transmissions at 100 KHz. (Admiralty List of Radio Signals, UK Hydrographic Office, Volume 2, 1995).

**19) radio telephone station**

IHO Definition: The equipment needed at one station to carry on two way voice communication by radio waves only. (Websters New World Dictionary Third College Edition).

**20) AIS base station**

IHO Definition: An AIS shore station for use by competent authorities to provide AIS service, manage the data link and enable effective ship to shore / shore to ship transmission of information. (Derived from IALA Guideline G1082).

Remarks:

None.

**27.76 category of refuse dump (catrfd)**

IHO Definition: Category of refuse dump.

**1) Cargo Residue/Slop**

IHO Definition: A facility where vessels can dispose of cargo residues and/or slops.

**2) Waste Oil**

IHO Definition: A facility where vessels can dispose of waste oil.

**3) Grey/Black Water**

IHO Definition: A facility where vessels can dispose of grey and/or black waste water.

**4) Domestic Refuse**

IHO Definition: A facility where vessels can dispose of domestic refuse.

Remarks:

No remarks.

**27.77 category of rescue station (CATRSC)**

IHO Definition: **CATEGORY OF RESCUE STATION.** Classification of aid station based on life saving equipment.

Attribute Type: Enumeration

**1) rescue station with lifeboat**

IHO Definition: A place where equipment for saving life at sea is maintained; the type of lifeboat may vary from fast, long distance boats to inflatable inshore boats. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**2) rescue station with rocket**

IHO Definition: A life saving station equipped with line-carrying rocket apparatus. (IHO Dictionary – S-32).

**4) refuge for shipwrecked mariners**

IHO Definition: Shelter or protection from danger or distress at sea. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**5) refuge for intertidal area walkers**

IHO Definition: Shelter or protection from danger in areas exposed to extreme and sudden tides or tidal streams. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**6) lifeboat lying at a mooring**

IHO Definition: A place where a lifeboat is moored ready for use. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**7) aid radio station**

IHO Definition: A radio station reserved for emergency situations; might also be a public telephone. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**8) first aid equipment**

IHO Definition: A place where first aid equipment is available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.74, November 2000).

**9) lifebuoy, ring buoy, life ring, life saver**

IHO Definition: A "kisby ring" or "perry buoy" designed to be thrown to a person in the water, to provide buoyancy and to prevent drowning.

Remarks:

No remarks.

**27.78 category of restricted area (CATREA)**

IHO Definition: **CATEGORY OF RESTRICTED AREA.** The official legal status of each kind of restricted area defines the kind of restriction(s), for example the restriction for a 'game reserve' may be 'entering prohibited'.

**Attribute Type:** Enumeration**1) offshore safety zone**

IHO Definition: The area around an offshore installation within which vessels are prohibited from entering without permission. Special regulations protect installations within a safety zone and vessels of all nationalities are required to respect the zone. (IHO Dictionary – S-32).

**4) nature reserve**

IHO Definition: A tract of land or water managed so as to preserve its flora, fauna, physical features, etc. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.75, November 2000, as amended).

**5) bird sanctuary**

IHO Definition: A place where birds are bred and protected. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.75, November 2000).

**6) game reserve**

IHO Definition: A place where wild animals or birds hunted for sport or food are kept undisturbed for private use. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.75, November 2000).

**7) seal sanctuary**

IHO Definition: A place where seals are protected. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.75, November 2000).

**8) degaussing range**

IHO Definition: An area, usually about two cables diameter, within which ships' magnetic fields may be measured; sensing instruments and cables are installed on the seabed in the range and there are cables leading from the range to a control position ashore. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**9) military area**

IHO Definition: An area controlled by the military in which restrictions may apply. (Australian Hydrographic Office).

**10) historic wreck area**

IHO Definition: An area around certain wrecks of historical importance to protect the wrecks from unauthorized interference by diving, salvage or deposition (including anchoring). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**12) navigational aid safety zone**

IHO Definition: An area around a navigational aid which vessels are prohibited from entering. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**14) minefield**

IHO Definition: An area laid and maintained with explosive mines for defence or practice purposes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**18) swimming area**

IHO Definition: An area in which people may swim and therefore vessel movement may be restricted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**19) waiting area**

IHO Definition: An area reserved for vessels waiting to enter a harbour. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**20) research area**

IHO Definition: An area where marine research takes place. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**21) dredging area**

IHO Definition: An area where dredging is taking place. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**22) fish sanctuary**

IHO Definition: A place where fish (including shellfish and crustaceans) are protected. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000, as amended).

**23) ecological reserve**

IHO Definition: A tract of land or water managed so as to preserve the relation of plants and living creatures to each other and to their surroundings. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000, as amended).

**24) no wake area**

IHO Definition: An area in which a vessels' speed must be reduced in order to reduce the size of the wake it produces. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**25) swinging area**

IHO Definition: An area where vessels turn. (Service Hydrographique et Océanographique de la Marine, France).

**26) water skiing area**

IHO Definition: An area within which people may water ski and therefore vessel movement may be restricted.

**27) environmentally sensitive sea area**

IHO Definition: A generic term which may be used to describe a wide range of areas, considered sensitive for a variety of environmental reasons. (IHO Chart Specifications, S-4).

**28) particularly sensitive sea area**

IHO Definition: An area that needs special protection through action by IMO because of its significance for regional ecological, socio-economic or scientific reasons and because it may be vulnerable to damage by international shipping activities. (IHO Chart Specifications, S-4).

**29) disengagement area**

IHO Definition: An area near a fairway where vessels can go to clear the way or make an about turn and possibly return to a waiting area when nautical conditions impose it.

**30) port security area**

IHO Definition: An area in which defence, law and treaty enforcement, and counter-terrorism activities that fall within the port and maritime domain apply. (Adapted from Wikipedia).

**31) coral sanctuary**

IHO Definition: A place where coral is protected.

**32) recreation area**

IHO Definition: An area within which recreational activities regularly take place and therefore vessel movement may be restricted. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.76, November 2000).

**33) ship pollution emission control**

IHO definition: An area within which the ship pollution emission is controlled.

Remarks:

- The official legal status of each kind of restricted area defines the kind of restriction(s), for example the restriction for a "game preserve" may be "entering prohibited"; the restriction for an "anchoring prohibition area" is "anchoring prohibited".

## 27.79 category of road (CATROD)

**IHO Definition:** **CATEGORY OF ROAD.** Classification of a road based on size.

**Attribute Type:** Enumeration

1) **motorway**

**IHO Definition:** A limited access dual carriageway road specially designed for fast long-distance traffic and subject to special regulations concerning its use. It may have more than two lanes. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **major road**

**IHO Definition:** A hard surfaced (metalled) road; a main through route. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.77, November 2000).

3) **minor road**

**IHO Definition:** A secondary road for local traffic. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.77, November 2000).

4) **track/path**

**IHO Definition:** Track – a rough path or way formed by use. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Path – a way or track laid down for walking or made by continual treading. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **major street**

**IHO Definition:** A main road, in an urban area, for through traffic. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.77, November 2000).

6) **minor street**

**IHO Definition:** A secondary road, in an urban area, for local traffic. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.77, November 2000).

**Remarks:**

No remarks.

## 27.80 category of schedule

**IHO Definition:** **CATEGORY OF SCHEDULE.** The type of schedule, for instance opening, closure, etc.

**Attribute Type:** Enumeration

1) **normal operation**

**IHO Definition:** The service, office, is open, fully manned, and operating normally, or the area is accessible as usual.

2) **closure**

**IHO Definition:** The service, office, or area is closed.

3) **unmanned operation**

**IHO Definition:** The service is available but not manned.

**Remarks:**

No remarks.

## 27.81 category of sea area (CATSEA)

IHO Definition: **CATEGORY OF SEA AREA.** Classification of an area based on its physical characteristics.

Attribute Type: Enumeration

2) **gat**

IHO Definition: A natural or artificial passage or channel through shoals or steep banks, or across a line of banks lying between two channels. (IHO Dictionary – S-32).

3) **bank**

IHO Definition: An elevation of the seafloor, at depths generally less than 200 m, but sufficient for safe surface navigation, commonly found on the continental shelf or near an island. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

4) **deep**

IHO Definition: In oceanography, an obsolete term which was generally restricted to depths greater than 6,000 m. (IHO Dictionary – S-32).

5) **bay**

IHO Definition: A wide indentation in the coastline generally smaller than a gulf and larger than a cove. For the purposes of the United Nations Convention on the Law of the Sea, a bay is a well-marked indentation whose penetration is in such proportion to the width of its mouth as to contain land locked waters and constitute more than a mere curvature of the coast. (IHO Dictionary – S-32).

6) **trench**

IHO Definition: A long, deep, asymmetrical depression with relatively steep sides, that is associated with subduction. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

7) **basin**

IHO Definition: A depression of the seafloor more or less equidimensional in plan and of variable extent. (IHO Dictionary – S-32).

8) **mud flats**

IHO Definition: A level tract of land, as the bed of a dry lake or an area frequently uncovered at low tide. Usually in plural. (IHO Dictionary – S-32).

9) **reef**

IHO Definition: A shallow elevation composed of consolidated material that may constitute a hazard to surface navigation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

10) **ledge**

IHO Definition: A rocky formation continuous with and fringing the shore. (IHO Dictionary – S-32).

11) **canyon**

IHO Definition: An elongated, narrow, steep-sided depression that generally deepens down-slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

12) **narrows**

IHO Definition: A navigable narrow part of a bay, strait, river, etc. (IHO Dictionary – S-32).

13) **shoal**

IHO Definition: A shallow elevation composed of unconsolidated material that may constitute a hazard to surface navigation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

14) **knoll**

IHO Definition: A distinct elevation with a rounded profile less than 1000m above the surrounding relief as measured from the deepest isobath that surrounds most of the feature. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

**15) ridge**

IHO Definition: An elongated elevation of varying complexity and size, generally having steep sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**16) seamount**

IHO Definition: A distinct generally equidimensional elevation greater than 1000m above the surrounding relief as measured from the deepest isobath that surrounds most of the feature. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**17) pinnacle**

IHO Definition: Any high tower or spire-shaped pillar or rock or coral, alone or cresting a summit. It may extend above the surface of the water. It may or may not be a hazard to surface navigation. (IHO Dictionary – S-32).

**18) abyssal plain**

IHO Definition: An extensive, flat, gently sloping or nearly level region at abyssal depths. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2<sup>nd</sup> Edition).

**19) plateau**

IHO Definition: A large, relatively flat elevation that is higher than the surrounding relief with one or more relatively steep sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**20) spur**

IHO Definition: A subordinate ridge protruding from a larger feature. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**21) shelf**

IHO Definition: The flat or gently sloping region adjacent to a continent or around an island that extends from the low water line to a depth, generally about 200m, where there is a marked increase in downward slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**22) trough**

IHO Definition: A long depression generally wide and flat bottomed with symmetrical and parallel sides. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**23) saddle**

IHO Definition: A broad pass or col in a ridge, rise or other elevation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**24) abyssal hill**

IHO Definition: An isolated small elevation on the deep seafloor. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

**25) apron**

IHO Definition: A gently dipping slope, with a smooth surface, commonly found around groups of islands and seamounts. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

**26) archipelagic apron**

IHO Definition: A gentle slope with a generally smooth surface of the seafloor, characteristically found around groups of islands or seamounts. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

**27) borderland**

IHO Definition: A region adjacent to a continent, normally occupied by or bordering a shelf and sometimes emerging as islands, that is irregular or blocky in plan or profile, with depths well in excess of those typical of a shelf. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

**28) continental margin**

IHO Definition: The zone, generally consisting of shelf, slope and continental rise, separating the continent from the deep seafloor or abyssal plain or plain. Occasionally a trench may be present in place of a continental rise. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

29) **continental rise**

IHO Definition: A gentle slope rising from the oceanic depths towards the foot of a continental slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

30) **escarpment**

IHO Definition: An elongated, characteristically linear, steep slope separating horizontal or gently sloping areas of the seafloor. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

31) **fan**

IHO Definition: A relatively smooth, depositional feature continuously deepening away from a sediment source commonly located at the lower termination of a canyon or canyon system. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

32) **fracture zone**

IHO Definition: A long narrow zone of irregular topography formed by the movement of tectonic plates associated with an offset of a spreading ridge axis, characterized by steep-sided and/or asymmetrical ridges, troughs or escarpments. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

33) **gap**

IHO Definition: A narrow break in a ridge, rise or other elevation. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

34) **guyot**

IHO Definition: A seamount having a comparatively smooth flat top. (IHO Dictionary – S-32 and IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

35) **hill**

IHO Definition: A distinct elevation generally of irregular shape, less than 1000m above the surrounding relief as measured from the deepest isobath that surrounds most of the feature. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

36) **hole**

IHO Definition: A depression of limited extent with all sides rising steeply from a relatively flat bottom. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

37) **levee**

IHO Definition: A depositional embankment bordering a canyon, valley or sea channel. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

38) **median valley**

IHO Definition: The axial depression of the mid-oceanic ridge system. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

39) **moat**

IHO Definition: An annular or partially annular depression commonly located at the base of seamounts, islands and other isolated elevations. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.1.0).

40) **mountains**

IHO Definition: A natural elevation of the earth's surface rising more or less abruptly from the surrounding level, and attaining an altitude which, relatively to adjacent elevations, is impressive or notable. (IHO Dictionary – S-32).

41) **peak**

IHO Definition: A conical or pointed elevation on a larger feature such as a seamount. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

42) **province**

IHO Definition: A geographically distinct region with a number of shared physiographic characteristics that contrast with those in the surrounding areas. This term should be modified with the generic term that best describes the majority of features in the region, for example “Seamount” in Baja California Seamount Province. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

43) **rise**

IHO Definition: A broad elevation that generally rises gently and smoothly from the surrounding relief. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

44) **sea channel**

IHO Definition: An elongated, meandering depression, usually occurring on a gently sloping plain or fan. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

45) **seamount chain**

IHO Definition: Several seamounts in linear or arcuate alignment. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, 2<sup>nd</sup> Edition).

46) **shelf-edge**

IHO Definition: The line along which there is a marked increase in slope at the seaward margin of a shelf. (Adapted from IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

47) **sill**

IHO Definition: A relatively shallow barrier between BASINS that may inhibit water movement. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

48) **slope**

IHO Definition: The sloping region that deepens from a shelf to the point where there is a general decrease in gradient. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

49) **terrace**

IHO Definition: A flat or gently sloping region, generally long and narrow, bounded along one edge by a steeper descending slope and along the other by a steeper ascending slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

50) **valley**

IHO Definition: An elongated depression that generally widens and deepens down-slope. (IHO-IOC Publication B-6, Standardization of Undersea Feature Names, Edition 4.2.0).

51) **canal**

IHO Definition: An artificial waterway with no flow, or a controlled flow, used for navigation, or for draining or irrigating land (ditch). (IHO Dictionary – S-32).

52) **lake**

IHO Definition: A large body of water entirely surrounded by land. (IHO Dictionary – S-32).

53) **river**

IHO Definition: A relatively large natural stream of water. (IHO Dictionary – S-32).

54) **reach**

IHO Definition: A straight section of a river, especially a navigable river between two bends; or an arm of the sea extending into the land. (Adapted from IHO Dictionary – S-32).

55) **intertidal cay**

IHO Definition: A low, flat island of sand, coral, etc. awash or submerged at high water. (Adapted from IHO Dictionary – S-32).

**56) submarine volcano**

IHO Definition: A seabed volcano, submerged at the chart sounding datum, which may or may not be active. (IHO Dictionary – S-32).

**57) chute**

IHO Definition: An inclined plane, sloping channel, or passage down or through which things may pass.

**58) backwater/slough**

IHO Definition: A body of water (as an inlet or tributary) that is out of the main current of a larger body.

**59) bend**

IHO Definition: A curve or change in direction of a watercourse or river.

Remarks:

No remarks.

**27.82 category of sensor (catsen)**

IHO Definition: Category of sensor.

**1) Light Activated**

IHO Definition: A sensor which is activated by a spotlight.

**2) Telephone Activated**

IHO Definition: A sensor which is activated by telephone.

**3) Radio Activated**

IHO Definition: Activated by radio signal.

Remarks:

No remarks.

**27.83 category of ship (excluding) (lc\_cse)**

IHO Definition: Excluding list of categories of ship for the applicability of a feature.

**1) All Types**

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

**2) Other**

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

**3) Non-Motorized Vessel**

IHO Definition: A vessel that is not propelled by an internal combustion engine, such as vessels propelled by wind or manual methods such as rowing or pedalling.

**5) Craft**

IHO Definition: A vessel or item of **floating equipment**.

**6) Vessel**

IHO Definition: An **inland waterway vessel** or **sea going ship**.

**7) Inland Waterway Vessel**

IHO Definition: A vessel intended solely or mainly for navigation on inland waterways.

**8) Sea Going Ship**

IHO Definition: A vessel certificated for sea-going service.

9) **Motor Vessel**

IHO Definition: A **motor cargo vessel** or a **motor tanker**.

10) **Motor Tanker**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks and built to navigate independently under its own motive power.

11) **Motor Cargo Vessel**

IHO Definition: A vessel, other than a motor tanker, intended for the carriage of goods and built to navigate independently under its own motive power.

12) **Canal Barge**

IHO Definition: An inland waterway vessel not exceeding 38.5 m in length and 5.05 m in breadth and usually operating on the Rhine-Rhone-Canal.

13) **Tug**

IHO Definition: A vessel specially built to perform towing operations.

14) **Pusher**

IHO Definition: A vessel specially built to propel a pushed convoy.

15) **Barge**

IHO Definition: A **dumb barge** or **tank barge**.

16) **Tank Barge**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks and built to be towed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres.

17) **Dumb Barge**

IHO Definition: A vessel, other than a tank barge, intended for the carriage of goods and built to be towed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres.

18) **Lighter**

IHO Definition: A **tank lighter**, **cargo lighter** or **ship borne lighter**.

19) **Tank Lighter**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks, built or specially modified to be pushed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres when not part of a pushed convoy.

20) **Cargo Lighter**

IHO Definition: A vessel, other than a tank lighter, intended for the carriage of goods and built or specially modified to be pushed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres when not part of a pushed convoy.

21) **Ship Borne Lighter**

IHO Definition: A lighter built to be carried aboard sea going ships and to navigate on inland waterways.

22) **Passenger Vessel**

IHO Definition: A day trip or **cabin vessel** constructed and equipped to carry more than 12 passengers.

23) **Passenger Sailing Vessel**

IHO Definition: A passenger vessel fitted out mainly with a view to propulsion under sail.

24) **Day Trip Vessel**

IHO Definition: A passenger vessel without overnight passenger cabins.

**25) Cabin Vessel**

IHO Definition: A passenger vessel with overnight passenger cabins.

**26) High-Speed Vessel**

IHO Definition: A motorized vessel capable of reaching speeds over 40km/h with respect to water.

**27) Floating Equipment**

IHO Definition: A floating installation carrying working gear such as cranes, dredging equipment, pile drivers or elevators.

**28) Worksite Craft**

IHO Definition: A vessel, appropriately built and equipped for use at worksites, such as a reclamation barge, hopper or pontoon barge, pontoon or stone-dumping vessel.

**29) Recreational Craft**

IHO Definition: A vessel other than a passenger vessel, intended for sport or pleasure.

**30) Dinghy**

IHO Definition: A boat for use in transport, rescue, salvage and work duties.

**31) Floating Establishment**

IHO Definition: Any floating installation not normally intended to be moved, such as a swimming bath, dock, jetty or boathouse.

**32) Floating Object**

IHO Definition: A raft or other structure, object or assembly capable of navigation, not being a vessel or floating equipment or establishment.

Remarks:

No remarks.

**27.84 category of ship (including) (lc\_csi)**

IHO Definition: Including list of categories of ship for the applicability of a feature.

**1) All Types**

IHO Definition: The sum of all of the different kinds (or sorts or types) of an entity.

**2) Other**

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

**3) Non-Motorized Vessel**

IHO Definition: A vessel that is not propelled by an internal combustion engine, such as vessels propelled by wind or manual methods such as rowing or pedalling.

**5) Craft**

IHO Definition: A vessel or item of **floating equipment**.

**6) Vessel**

IHO Definition: An **inland waterway vessel** or **sea going ship**.

**7) Inland Waterway Vessel**

IHO Definition: A vessel intended solely or mainly for navigation on inland waterways.

**8) Sea Going Ship**

IHO Definition: A vessel certificated for sea-going service.

**9) Motor Vessel**

IHO Definition: A **motor cargo vessel** or a **motor tanker**.

**10) Motor Tanker**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks and built to navigate independently under its own motive power.

**11) Motor Cargo Vessel**

IHO Definition: A vessel, other than a motor tanker, intended for the carriage of goods and built to navigate independently under its own motive power.

**12) Canal Barge**

IHO Definition: An inland waterway vessel not exceeding 38.5 m in length and 5.05 m in breadth and usually operating on the Rhine-Rhone-Canal.

**13) Tug**

IHO Definition: A vessel specially built to perform towing operations.

**14) Pusher**

IHO Definition: A vessel specially built to propel a pushed convoy.

**15) Barge**

IHO Definition: A **dumb barge** or **tank barge**.

**16) Tank Barge**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks and built to be towed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres.

**17) Dumb Barge**

IHO Definition: A vessel, other than a tank barge, intended for the carriage of goods and built to be towed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres.

**18) Lighter**

IHO Definition: A **tank lighter**, **cargo lighter** or **ship borne lighter**.

**19) Tank Lighter**

IHO Definition: A vessel intended for the carriage of goods in fixed tanks, built or specially modified to be pushed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres when not part of a pushed convoy.

**20) Cargo Lighter**

IHO Definition: A vessel, other than a tank lighter, intended for the carriage of goods and built or specially modified to be pushed, either having no motive power of its own or having only sufficient motive power to perform restricted manoeuvres when not part of a pushed convoy.

**21) Ship Borne Lighter**

IHO Definition: A lighter built to be carried aboard sea going ships and to navigate on inland waterways.

**22) Passenger Vessel**

IHO Definition: A day trip or **cabin vessel** constructed and equipped to carry more than 12 passengers.

**23) Passenger Sailing Vessel**

IHO Definition: A passenger vessel fitted out mainly with a view to propulsion under sail.

**24) Day Trip Vessel**

IHO Definition: A passenger vessel without overnight passenger cabins.

**25) Cabin Vessel**

IHO Definition: A passenger vessel with overnight passenger cabins.

**26) High-Speed Vessel**

IHO Definition: A motorized vessel capable of reaching speeds over 40km/h with respect to water.

**27) Floating Equipment**

IHO Definition: A floating installation carrying working gear such as cranes, dredging equipment, pile drivers or elevators.

**28) Worksite Craft**

IHO Definition: A vessel, appropriately built and equipped for use at worksites, such as a reclamation barge, hopper or pontoon barge, pontoon or stone-dumping vessel.

**29) Recreational Craft**

IHO Definition: A vessel other than a passenger vessel, intended for sport or pleasure.

**30) Dinghy**

IHO Definition: A boat for use in transport, rescue, salvage and work duties.

**31) Floating Establishment**

IHO Definition: Any floating installation not normally intended to be moved, such as a swimming bath, dock, jetty or boathouse.

**32) Floating Object**

IHO Definition: A raft or other structure, object or assembly capable of navigation, not being a vessel or floating equipment or establishment.

Remarks:

No remarks.

## 27.85 category of shoreline construction (CATSLC)

IHO Definition: **CATEGORY OF SHORELINE CONSTRUCTION.** Classification of shoreline construction based on use.

Attribute Type: Enumeration

**1) breakwater**

IHO Definition: A structure protecting a shore area, harbour, anchorage, or basin from waves. (IHO Dictionary – S-32).

**2) groyne**

IHO Definition: A low artificial wall-like structure of durable material extending from the land to seaward for a particular purpose, such as to protect the coast or to force a current to scour a channel. (IHO Dictionary – S-32).

**3) mole**

IHO Definition: A form of breakwater alongside which vessels may lie on the sheltered side only; in some cases it may lie entirely within an artificial harbour, permitting vessels to lie along both sides. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.84, November 2000).

**4) pier (jetty)**

IHO Definition: A long, narrow structure extending into the water to afford a berthing place for vessels, to serve as a promenade, etc. (IHO Dictionary – S-32).

**5) promenade pier**

IHO Definition: A pier built only for recreational purposes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.84, November 2000).

6) **wharf**

IHO Definition: A structure serving as a berthing place for vessels. (IHO Dictionary – S-32).

7) **training wall**

IHO Definition: A wall or bank, often submerged, built to direct or confine the flow of a river or tidal current, or to promote a scour action. (Adapted from IHO Dictionary – S-32 and IHO Chart Specifications, S-4).

8) **rip rap**

IHO Definition: A layer of broken rock, cobbles, boulders, or fragments of sufficient size to resist the erosive forces of flowing water and wave action. (Adapted from Marine Chart Manual, US National Oceanic and Atmospheric Administration – NOAA, 1992).

9) **revetment**

IHO Definition: Facing of stone or other material, either permanent or temporary, placed along the edge of a stream, river or canal to stabilize the bank and to protect it from the erosive action of the stream. (Adapted from IHO Dictionary – S-32).

10) **sea wall**

IHO Definition: An embankment or wall for protection against waves or tidal action along a shore or water front. (IHO Dictionary – S-32).

11) **landing steps**

IHO Definition: Steps at the shoreline as the connection between land and water on different levels. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

12) **ramp**

IHO Definition: A sloping structure which may include rails that can either be used, as a landing place, at variable water levels, for small vessels, landing ships, or a ferry boat, or for hauling a cradle carrying a vessel. (Adapted from IHO Dictionary – S-32).

13) **slipway**

IHO Definition: The prepared and usually reinforced inclined surface on which keel- and bilge-blocks are laid for supporting a vessel under construction. (IHO Dictionary – S-32).

14) **fender**

IHO Definition: A protective structure designed to cushion the impact of a vessel and prevent damage. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

15) **solid face wharf**

IHO Definition: A wharf consisting of a solid wall of concrete, masonry, wood etc., such that the water cannot circulate freely under the wharf. The type of construction affects ship-handling; for example, a solid face wharf may give shelter from tidal streams, but under certain circumstances a cushion of water may build up between such a wharf and a ship attempting to berth at it, causing difficulties in ship handling. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.85, November 2000).

16) **open face wharf**

IHO Definition: A wharf supported on piles or other structures which allow free circulation of water under the wharf. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.85, November 2000).

17) **log ramp**

IHO Definition: An inclined plane used to dump logs into the water for transport, or to haul logs out of the water for processing. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

18) **lock/guide wall**

IHO Definition: Permanent structure bounding a lock and including guide walls. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

19) **ice breaker**

IHO Definition: An often wedge-like structure used for protecting a bridge pier, dock, facility, etc. from floating ice or other debris. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

20) **swimming facility**

IHO Definition: An artificial pool or swimming enclosure, especially one in the open air, which may be constructed of wire mesh or heavy netting supported by cables, buoys or piles, for swimming in. (Adapted from the Macquarie Concise Dictionary).

21) **water intake structure**

IHO Definition: A structure designed to divert water from a river or channel for the purpose of water supply, hydroelectric power or irrigation. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

22) **quay**

IHO Definition: A wharf approximately parallel to the shoreline and accommodating ships on one side only, the other side being attached to the shore. It is usually of solid construction, as contrasted with the open pile construction usually used for piers. (IHO Dictionary – S-32).

23) **tie-up wall**

IHO Definition: A section of wall designated for tying-up vessels awaiting transit. Bollards and mooring devices are available for both large and small ships. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

No remarks.

## 27.86 category of signal station, traffic (CATSIT)

IHO Definition: **CATEGORY OF SIGNAL STATION, TRAFFIC.** Classification of station based on the traffic service provided.

Attribute Type: Enumeration

1) **port control**

IHO Definition: A signal station for the control of vessels within a port. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

2) **port entry and departure**

IHO Definition: A signal station for the control of vessels entering or leaving a port. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

3) **international port traffic**

IHO Definition: A signal station displaying International Port Traffic signals. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

4) **berthing signal station**

IHO Definition: A signal station for the control of vessels when berthing. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

5) **dock**

IHO Definition: A signal station for the control of vessels entering or leaving a dock. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

6) **lock**

IHO Definition: A signal station for the control of vessels entering or leaving a lock. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

7) **flood barrage station**

IHO Definition: A signal station for the control of vessels wishing to pass through a flood control barrage. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

8) **bridge passage**

IHO Definition: A signal station for the control of vessels wishing to pass under a bridge. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

9) **dredging**

IHO Definition: A signal station indicating when dredging is in progress. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

10) **traffic control light**

IHO Definition: Visual signal lights placed in a waterway to indicate to shipping the movements authorized at the time at which they are shown. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.86, November 2000).

Remarks:

No remarks.

**27.87 category of signal station, warning (CATSIW)**

IHO Definition: **CATEGORY OF SIGNAL STATION, WARNING.** Classification of station based on the warning service provided.

Attribute Type: Enumeration

1) **danger**

IHO Definition: A signal or message warning of the presence of a danger to navigation. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

2) **maritime obstruction**

IHO Definition: A signal or message warning of the presence of a maritime obstruction. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

3) **cable**

IHO Definition: A signal or message warning of the presence of a cable. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

4) **military practice**

IHO Definition: A signal or message warning of activity in a military practice area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

5) **distress**

IHO Definition: A station that may receive or transmit distress signals. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

6) **weather**

IHO Definition: A visual signal displayed to indicate a weather forecast. (IHO Dictionary – S-32).

7) **storm**

IHO Definition: A signal or message conveying information about storm conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

8) **ice warning**

IHO Definition: A signal or message conveying information about ice conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.87, November 2000).

9) **time**

IHO Definition: An accurate signal marking a specified time or time interval. It is used primarily for determining errors of timepieces. Such signals are usually sent from an observatory by radio, but visual signals are used at some ports. (IHO Dictionary – S-32).

10) **tide**

IHO Definition: A signal or message conveying information on tidal conditions in the area in question. (IHO Dictionary – S-32).

11) **tidal stream**

IHO Definition: A signal or message conveying information on condition of tidal currents in the area in question. (IHO Dictionary – S-32).

12) **tide gauge**

IHO Definition: A device for measuring the height of tide. A graduated staff in a sheltered area where visual observations can be made; or it may consist of an elaborate recording instrument making a continuous graphic record of tide height against time. Such an instrument is usually actuated by a float in a pipe communicating with the sea through a small hole which filters out shorter waves. (IHO Dictionary – S-32).

13) **tide scale**

IHO Definition: A visual scale which directly shows the height of the water above chart datum or a local datum. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.88, November 2000).

14) **diving**

IHO Definition: A signal or message warning of diving activity. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.88, November 2000).

15) **water level gauge**

IHO Definition: A device for measuring and conveying information about the water level (non-tidal) in the area in question. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.88, November 2000).

16) **vertical clearance indication**

IHO Definition: An indication of the vertical clearance of a bridge, overhead cable, etc. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

18) **depth indication**

IHO Definition: An indication of the local depth. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

Remarks:

No remarks.

## 27.88 category of silo/tank (CATSIL)

IHO Definition: **CATEGORY OF SILO/TANK.** Classification based on the product for which a silo or tank is used.

Attribute Type: Enumeration

1) **silo in general**

IHO Definition: A large storage structure used for storing loose materials. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **tank in general**

IHO Definition: A fixed structure for storing liquids. (IHO Dictionary – S-32).

3) **grain elevator**

IHO Definition: A storage building for grain. Usually a tall frame, metal or concrete structure with an especially compartmented interior. (The New Encyclopaedia Britannica Micropaedia, 15<sup>th</sup> Edition).

4) **water tower**

IHO Definition: A tower supporting an elevated storage tank of water. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

No remarks.

**27.89 category of slope (CATSLO)**

IHO Definition: **CATEGORY OF SLOPE.** Classification of a stretch of ground forming a natural or artificial incline.

Attribute Type: Enumeration

1) **cutting**

IHO Definition: An excavation through high ground for a road, canal, etc. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.90, November 2000).

2) **embankment**

IHO Definition: A man-made raised long mound of earth or other material. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

3) **dune**

IHO Definition: A mound, ridge or hill of drifted material on the sea coast or in a desert. (Adapted from IHO Dictionary – S-32).

4) **hill**

IHO Definition: A small isolated elevation, smaller than a mountain. (IHO Dictionary – S-32).

5) **pingo**

IHO Definition: A dome-shaped hill formed in a permafrost area when the hydrostatic pressure of freezing ground water causes the upheaval of a layer of frozen ground. (Encyclopaedia Britannica Micropaedia, 15<sup>th</sup> Edition).

6) **cliff**

IHO Definition: Land rising abruptly for a considerable distance above the water or surrounding land. (IHO Dictionary – S-32).

7) **scree**

IHO Definition: A mass of detritus, forming a precipitous, strong slope upon a mountain-side. Also the material composing such a slope. (IHO Dictionary – S-32).

Remarks:

No remarks.

**27.90 category of small craft facility (CATSCF)**

IHO Definition: **CATEGORY OF SMALL CRAFT FACILITY.** Classification of services and facilities for the small craft user.

Attribute Type: Enumeration

**1) visitors berth**

IHO Definition: A berth set aside for the use of visiting vessels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.91, November 2000).

**2) nautical club**

IHO Definition: A club for mariners generally associated with other small craft facilities. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.91, November 2000).

**3) boat hoist**

IHO Definition: A hoist for lifting boats out of the water. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.91, November 2000).

**4) sailmaker**

IHO Definition: A place where sails are made or may be taken for repair. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.91, November 2000).

**5) boatyard**

IHO Definition: A place on shore where boats may be built, stored and repaired. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**6) public inn**

IHO Definition: A public house providing food, drink and accommodation. (The Collins Reference English Dictionary, 1992).

**7) restaurant**

IHO Definition: A commercial establishment serving food. (The Collins Reference Dictionary, 1992).

**8) chandler**

IHO Definition: A dealer in ships' supplies. (The Collins Reference Dictionary, 1992).

**9) provisions**

IHO Definition: A place where food and other such supplies are available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**10) doctor**

IHO Definition: A place where a doctor is available to provide medical attention. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**11) pharmacy**

IHO Definition: A place where medical drugs are dispensed. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**12) water tap**

IHO Definition: A place where fresh water is available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**13) fuel station**

IHO Definition: A place where fuel is available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**14) electricity outlet**

IHO Definition: A place where a connection to an electrical supply is available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**15) bottle gas**

IHO Definition: A place where bottled gas is available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**16) showers**

IHO Definition: A place where showers are available. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**17) launderette**

IHO Definition: A place where there are facilities for washing clothes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**18) public toilets**

IHO Definition: A place where toilets are available for public use. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**19) post box**

IHO Definition: A place where mail may be posted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**20) public telephone**

IHO Definition: A place where a telephone is available for public use. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**21) refuse bin**

IHO Definition: A place where refuse may be dumped. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**22) car park**

IHO Definition: A place where cars may be parked. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**23) parking for boats and trailers**

IHO Definition: A place on shore where boats and/or trailers may be parked. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**24) caravan site**

IHO Definition: A place where caravans may be parked or where caravan accommodation is provided. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**25) camping site**

IHO Definition: A place where visitors may pitch tents and camp. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**26) sewage pump-out station**

IHO Definition: A place where sewage may be pumped off a vessel. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**27) emergency telephone**

IHO Definition: A place where a telephone is available for emergency use only. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**28) landing/launching place for boats**

IHO Definition: A place where boats may be landed or launched. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**29) visitors mooring**

IHO Definition: A mooring set aside for the use of visiting vessels. (IHO Transfer Standard for Digital Hydrographic Data, Appendix A: Object Catalogue - Description of the Feature Coding Schema to be Used for Hydrographic Requirements)

**30) scrubbing berth**

IHO Definition: A place where vessels may berth for the purpose of careening. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**31) picnic area**

IHO Definition: A place where people may go to eat a picnic. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**32) mechanics workshop**

IHO Definition: A place where mechanical repairs can be undertaken to engines or other vessel equipment. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

**33) guard and/or security service**

IHO Definition: A place where a vessel is patrolled by a security service or stored in a secure lockup. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

Remarks:

No remarks.

**27.91 category of special purpose mark (CATSPM)**

IHO Definition: **CATEGORY OF SPECIAL PURPOSE MARK.** Classification of an aid to navigation which signifies some special purpose.

Attribute Type: Enumeration

**1) firing danger mark**

IHO Definition: A mark used to indicate a firing danger area, usually at sea. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**2) target mark**

IHO Definition: Any object toward which something is directed. The distinctive marking or instrumentation of a ground point to aid its identification on a photograph. (Adapted from IHO Dictionary – S-32).

**3) marker ship mark**

IHO Definition: A mark marking the position of a ship which is used as a target during some military exercise. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

**4) degaussing range mark**

IHO Definition: A mark used to indicate a degaussing range. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**5) barge mark**

IHO Definition: A mark of relevance to barges. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**6) cable mark**

IHO Definition: A mark used to indicate the position of submarine cables or the point at which they run on to the land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**7) spoil ground mark**

IHO Definition: A mark used to indicate the limit of a spoil ground. (Adapted from IHO Dictionary – S-32).

**8) outfall mark**

IHO Definition: A mark used to indicate the position of an outfall or the point at which it leaves the land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**9) ODAS**

IHO Definition: Ocean Data Acquisition System. (IHO Dictionary – S-32).

**10) recording mark**

IHO Definition: A mark used to record data for scientific purposes. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**11) seaplane anchorage mark**

IHO Definition: A mark used to indicate a seaplane anchorage. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**12) recreation zone mark**

IHO Definition: A mark used to indicate a recreation zone. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**13) private mark**

IHO Definition: A privately maintained mark. (IHO Transfer Standard for Digital Hydrographic Data, Appendix A: Object Catalogue - Description of the Feature Coding Schema to be Used for Hydrographic Requirements)

**14) mooring mark**

IHO Definition: A mark indicating a mooring or moorings. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**15) LANBY**

IHO Definition: A large buoy designed to take the place of a lightship where construction of an offshore light station is not feasible. (IHO Dictionary – S-32).

**16) leading mark**

IHO Definition: Aids to navigation or other indicators so located as to indicate the path to be followed. Leading marks identify a leading line when they are in transit. (IHO Dictionary – S-32).

**17) measured distance mark**

IHO Definition: A mark forming part of a transit indicating one end of a measured distance. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**18) notice mark**

IHO Definition: A notice board or sign indicating information to the mariner. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**19) TSS Mark**

IHO Definition: A mark indicating a Traffic Separation Scheme. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.94, November 2000).

**20) anchoring prohibited mark**

IHO Definition: A mark indicating an anchoring prohibited area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**21) berthing prohibited mark**

IHO Definition: A mark indicating that berthing is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**22) overtaking prohibited mark**

IHO Definition: A mark indicating that overtaking is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**23) two-way traffic prohibited mark**

IHO Definition: A mark indicating a one-way route. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**24) reduced wake mark**

IHO Definition: A mark indicating that vessels must not generate excessive wake. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**25) speed limit mark**

IHO Definition: A mark indicating that a speed limit applies. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**26) stop mark**

IHO Definition: A mark indicating the place where the bow of a ship must stop when traffic lights show red. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**27) general warning mark**

IHO Definition: A mark indicating that special caution must be exercised in the vicinity of the mark. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**28) sound ship's siren mark**

IHO Definition: A mark indicating that a ship should sound its siren or horn. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**29) restricted vertical clearance mark**

IHO Definition: A mark indicating the minimum vertical space available for passage. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**30) maximum vessel's draught mark**

IHO Definition: A mark indicating the maximum draught of vessel permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**31) restricted horizontal clearance mark**

IHO Definition: A mark indicating the minimum horizontal space available for passage. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**32) strong current warning mark**

IHO Definition: A mark warning of strong currents. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**33) berthing permitted mark**

IHO Definition: A mark indicating that berthing is allowed. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**34) overhead power cable mark**

IHO Definition: A mark indicating an overhead power cable. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**35) channel edge gradient mark**

IHO Definition: A mark indicating the gradient of the slope of a dredge channel edge. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**36) telephone mark**

IHO Definition: A mark indicating the presence of a telephone. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**37) ferry crossing mark**

IHO Definition: A mark indicating that a ferry route crosses the ship route; often used with a 'sound ship's siren' mark. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**39) pipeline mark**

IHO Definition: A mark used to indicate the position of submarine pipelines or the point at which they run on to the land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**40) anchorage mark**

IHO Definition: A mark indicating an anchorage area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**41) clearing mark**

IHO Definition: A mark used to indicate a clearing line. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**42) control mark**

IHO Definition: A mark indicating the location at which a restriction or requirement exists. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**43) diving mark**

IHO Definition: A mark indicating that diving may take place in the vicinity. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**44) refuge beacon**

IHO Definition: A mark providing or indicating a place of safety. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.95, November 2000).

**45) foul ground mark**

IHO Definition: A mark indicating a foul ground. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**46) yachting mark**

IHO Definition: A mark installed for use by yachtsmen. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**47) heliport mark**

IHO Definition: A mark indicating an area where helicopters may land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**48) GNSS mark**

IHO Definition: A mark indicating a location at which a GNSS position has been accurately determined. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**49) seaplane landing mark**

IHO Definition: A mark indicating an area where seaplanes land. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**50) entry prohibited mark**

IHO Definition: A mark indicating that entry is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**51) work in progress mark**

IHO Definition: A mark indicating that work (generally construction) is in progress. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**52) mark with unknown purpose**

IHO Definition: A mark whose detailed characteristics are unknown. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**53) wellhead mark**

IHO Definition: A mark indicating a borehole that produces or is capable of producing oil or natural gas. (Adapted from IHO Dictionary – S-32).

**54) channel separation mark**

IHO Definition: A mark indicating the point at which a channel divides separately into two channels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**55) marine farm mark**

IHO Definition: A mark indicating the existence of a fish, mussel, oyster or pearl farm/culture. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**56) artificial reef mark**

IHO Definition: A mark indicating the existence or the extent of an artificial reef. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.96, November 2000).

**57) ice mark**

IHO Definition: A mark, used year round, that may be submerged when ice passes through the area.

**58) nature reserve mark**

IHO Definition: A mark used to define the boundary of a nature reserve.

**59) fish aggregating device**

IHO Definition: A fish aggregating (or aggregation) device (FAD) is a man-made object used to attract ocean going pelagic fish such as marlin, tuna and mahi-mahi (dolphin fish). They usually consist of buoys or floats tethered to the ocean floor with concrete blocks or adrift. (Wikipedia, 2017).

**60) wreck mark**

IHO Definition: A mark used to indicate the existence of a wreck.

**61) customs mark**

IHO Definition: A mark used to indicate the existence of a customs checkpoint.

**62) causeway mark**

IHO Definition: A mark used to indicate the existence of a causeway.

**63) wave recorder**

IHO Definition: A surface following buoy used to measure wave activity.

Remarks:

- A mark may be a beacon, a buoy, a signpost or may take another form.

**27.92 category of structure**

IHO Definition: **CATEGORY OF STRUCTURE.** Classification of a covered or partially covered area where different use types of vessel can berth.

Attribute Type: Enumeration

**boathouse**

IHO Definition: A building or shed, usually built partly over water, for sheltering a boat or boats.

**covered bulk terminal**

IHO Definition: A covered or partially covered terminal for the handling of bulk materials such as iron ore, coal, etc. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

**covered wharf**

IHO Definition: A covered or partially covered structure serving as a berthing place for vessels. (Adapted from IHO Dictionary – S-32).

**covered service terminal**

IHO Definition: A covered or partially covered terminal within which the floating equipment (dredges, tugs ...) of harbour services are berthed and serviced.

**covered passenger terminal**

IHO Definition: A covered or partially covered terminal for the loading and unloading of passengers. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.38, November 2000).

Remarks:

No remarks.

### 27.93 category of tidal stream (CAT\_TS)

IHO Definition: **CATEGORY OF TIDAL STREAM.** Classification of the alternating horizontal movement of water associated with the rise and fall of the tide caused by tide producing forces.

Attribute Type: Enumeration

#### 1) flood stream

IHO Definition: The horizontal movement of water associated with the rising tide. Flood streams generally set towards the shore, or in the direction of the tide progression. (Adapted from IHO Dictionary – S-32).

#### 2) ebb stream

IHO Definition: The horizontal movement of water associated with falling tide. Ebb streams generally set seaward, or in the opposite direction to the tide progression. (IHO Dictionary – S-32).

#### 3) other tidal flow

IHO Definition: Any other horizontal movement of water associated with tides, for example rotary flow. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.97, November 2000).

Remarks:

No remarks.

### 27.94 category of time and behaviour (cattab)

IHO Definition: Category of time and behaviour.

#### 1) Operational Period

IHO Definition: Being in a position or adjustment to permit passage or to perform an operation.

#### 2) Non-Operational Period

IHO Definition: Being in a position or adjustment to prevent passage.

Remarks:

No remarks.

### 27.95 category of vegetation (CATVEG)

IHO Definition: **CATEGORY OF VEGETATION.** Classification of the plant life of an area or region.

Attribute Type: Enumeration

#### 3) bush

IHO Definition: A shrub or clump of shrubs with stems of moderate length. (The Concise Oxford Dictionary).

#### 4) deciduous wood

IHO Definition: A wood with trees that shed their leaves annually. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

#### 5) coniferous wood

IHO Definition: A wood with evergreen trees of a group usually bearing cones, including yews, cedars and redwoods. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

6) **wood in general (inc mixed wood)**

IHO Definition: Growing trees densely occupying a tract of land. (The Concise Oxford Dictionary).

11) **reed**

IHO Definition: Any of various water or marsh plants with a firm stem. (The Concise Oxford Dictionary).

13) **tree in general**

IHO Definition: An individual woody perennial plant, typically having a single stem or trunk growing to a considerable height and bearing lateral branches at some distance from the ground. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

14) **evergreen tree**

IHO Definition: Having green foliage all the year round. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

15) **coniferous tree**

IHO Definition: A cone-bearing, needle-leaved or scale-leaved evergreen tree. (Adapted from The New Encyclopaedia Britannica, 15<sup>th</sup> Edition 1991).

16) **palm tree**

IHO Definition: A tropical or sub-tropical tree, shrub or vine having a tall, unbranched, columnar trunk. The trunk is crowned by a tuft or large, pleated fan or feather shaped leaves with stout sheathing and often prickly petioles (stalks), the persistent bases of which frequently clothe the trunk. (Adapted from The New Encyclopedia Britannica, 15<sup>th</sup> Edition 1991).

17) **nipa palm tree**

IHO Definition: A rare palm tree with regular branching involving equal or sub-equal division of the apex that results in forking. (Adapted from The New Encyclopedia Britannica, 15<sup>th</sup> Edition 1991).

18) **casuarina tree**

IHO Definition: A tree characterized by slender, green, often drooping branches that are deeply grooved and that bear, at intervals, whorls of fine leaves. (Adapted from The New Encyclopedia Britannica, 15<sup>th</sup> Edition 1991).

19) **eucalypt tree**

IHO Definition: An instance of a large genus of mostly very large trees (90 metres). (Adapted from The New Encyclopaedia Britannica, 15<sup>th</sup> Edition 1991).

20) **deciduous tree**

IHO Definition: Sheds its leaves each year at the end of the period of growth. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

22) **filao tree**

IHO Definition: Casuarina equisetifolia, the most widespread and well-known member of the family Casuarinaceae. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

No remarks.

## 27.96 category of vehicle transfer (catvtr)

IHO Definition: Category of vehicle transfer.

1) **Official**

IHO Definition: Of or relating to an office or a post of authority.

**2) Private**

IHO Definition: Administered by an individual or corporation, rather than a State or a public body.

**3) Suitable for Car Cranes**

IHO Definition: Vehicle transfer location is suitable for car cranes.

**4) Suitable for Car Planks**

IHO Definition: Vehicle transfer location is suitable for car planks.

**5) Permission Required**

IHO Definition: The transfer of a vehicle requires permission.

**6) Locked Gate**

IHO Definition: The access to the public road is locked.

Remarks:

No remarks.

**27.97 category of voltage (catvol)**

IHO Definition: The electrical voltage provided by the power supply station.

**1) 230V**

IHO Definition: 230 Volts

**2) 400V**

IHO Definition: 400 Volts.

Remarks:

No remarks.

**27.98 category of water turbulence (CATWAT)**

IHO Definition: **CATEGORY OF WATER TURBULENCE.** Classification of an unstable sea state.

Attribute Type: Enumeration

**1) breakers**

IHO Definition: A wave breaking on the shore, over a reef, etc. Breakers may be roughly classified into three kinds, although the categories may overlap: spilling breakers break gradually over a considerable distance; plunging breakers tend to curl over and break with a crash; and surging breakers peak up, but then instead of spilling or plunging they surge up on the beach face. The French word “brisant” is also used for the obstacle causing the breaking of the wave. (IHO Dictionary – S-32).

**2) eddies**

IHO Definition: Circular movements of water usually formed where currents pass obstructions, between two adjacent currents flowing counter to each other, or along the edge of a permanent current. (IHO Dictionary – S-32).

**3) overfalls**

IHO Definition: Short, breaking waves occurring when a strong current passes over a shoal or other submarine obstruction or meets a contrary current or wind. (IHO Dictionary – S-32).

**4) tide rips**

IHO Definition: Small waves formed on the surface of water by the meeting of opposing tidal currents or by a tidal current crossing an irregular bottom. Vertical oscillation, rather than progressive waves, is characteristic of tide rips. (IHO Dictionary – S-32).

5) **bombora**

IHO Definition: A wave that forms over a submerged offshore reef or rock, sometimes (in very calm weather or at high tide) nearly swelling but in other conditions breaking heavily and producing a dangerous stretch of broken water; the reef or rock itself. (Australian National Dictionary).

6) **under water turbulence**

IHO Definition: An under water turbulence. (Inland ENC Harmonization Group)

Remarks:

No remarks.

## 27.99 category of waterway gauge (catgag)

IHO Definition: Category of waterway gauge.

1) **Water Level Staff / Pole**

IHO Definition: Level indicator consisting of a calibrated staff/pole and the associated bench mark.

2) **Recording Water Level Gauge**

IHO Definition: Analog or digital water level measuring and recording device.

3) **Recording Water Level Gauge With Remote Access**

IHO Definition: Recording water level gauge providing information remotely by any method.

4) **Recording Water Level Gauge With External Indicator**

IHO Definition: Recording gauge providing information of the water level via a large external indicator.

5) **Recording Water Level Gauge With Remote Access and Remote Indicator**

IHO Definition: Recording gauge providing information remotely by any method and providing information of the water level via a large external indicator.

Remarks:

No remarks.

## 27.100 category of weed/kelp (CATWED)

IHO Definition: **CATEGORY OF WEED/KELP.** Classification of marine vegetation of the algae class.

Attribute Type: Enumeration

1) **kelp**

IHO Definition: A giant plant sometimes 60 metres long with no roots, it is anchored by hold-fasts or tendrils up to 10 metres long, that cling to rock. Gas filled bubbles on fronds act as floats keeping the kelp just below the surface. (Earth Sciences References; Mary McNeil).

2) **seaweed**

IHO Definition: The general name for marine plants of the algae class which grow in long narrow ribbons. (International Maritime Dictionary, 2<sup>nd</sup> Edition).

4) **sargasso**

IHO Definition: A certain type of seaweed, or more generally, a large floating mass of this seaweed. (IHO Dictionary – S-32).

Remarks:

No remarks.

**27.101 category of wreck (CATWRK)**IHO Definition: **CATEGORY OF WRECK.** Classification of a wrecked or ruined ship.Attribute Type: Enumeration1) **non-dangerous wreck**IHO Definition: A wreck which is not considered to be dangerous to surface navigation. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.105, November 2000).2) **dangerous wreck**IHO Definition: A wreck submerged at such a depth as to be considered dangerous to surface navigation. (IHO Dictionary – S-32).3) **distributed remains of wreck**IHO Definition: A substantively decayed wreck over which it is safe to navigate but which should be avoided for anchoring, taking the ground or ground fishing. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.105, November 2000).4) **wreck showing mast/masts**IHO Definition: Wreck of which only the mast(s) is visible at the sounding datum indicated. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.105, November 2000).5) **wreck showing any portion of hull or superstructure**IHO Definition: Wreck of which any portion of the hull or superstructure is visible at the sounding datum indicated. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.105, November 2000).Remarks:

No remarks.

**27.102 category of zone of confidence in data (CATZOC)**IHO Definition: **CATEGORY OF ZONE OF CONFIDENCE IN DATA.** Classification of the zone of confidence in data within an area based on the positional accuracy, survey equipment and coverage.Attribute Type: Enumeration1) **zone of confidence A1**IHO Definition: Positional Accuracy +/- 5 metres + 5% depth; Depth Accuracy 0.5 metre + 1% depth; Full area search undertaken. Significant seafloor features detected and depths measured; Controlled, systematic survey, high position and depth accuracy achieved using DGPS or a minimum three high quality lines of position (LOP) and a multibeam, channel or mechanical sweep system. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).2) **zone of confidence A2**IHO Definition: Positional Accuracy +/- 20 metres; Depth Accuracy 1.0 metre + 2% depth; Full area search undertaken. Significant seafloor features detected and depths measured; Controlled, systematic survey achieving position and depth accuracy less than ZOC A1 and using a modern survey echosounder and a sonar or mechanical sweep system. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).3) **zone of confidence B**IHO Definition: Positional Accuracy +/- 50 metres; Depth Accuracy 1.0 metre + 2% depth; Full area search not achieved, uncharted features hazardous to surface navigation are not expected but may exist; Controlled, systematic survey achieving similar depth but lesser position accuracies than ZOCA2, using a

modern survey echosounder, but no sonar or mechanical sweep system. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).

4) **zone of confidence C**

**IHO Definition:** Positional Accuracy +/- 500 metres; Depth Accuracy 2.0 metre + 5% depth; Full area search not achieved, depth anomalies may be expected; Low accuracy survey or data collected on an opportunity basis such as soundings on passage. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).

5) **zone of confidence D**

**IHO Definition:** Positional Accuracy worse than ZOC C; Depth Accuracy worse than ZOC C; Full area search not achieved, large depth anomalies may be expected; Poor quality data or data that cannot be quality assessed due to lack of information. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).

6) **zone of confidence U**

**IHO Definition:** The quality of the bathymetric data has yet to be assessed. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.107, November 2000).

**Remarks:**

- The full categorisation of each category is as follows:

| 1                | 2                                                                       | 3                                      | 4                 | 5                                                                                                                  |
|------------------|-------------------------------------------------------------------------|----------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------------------|
| ZOC <sub>1</sub> | Position Accuracy <sup>2</sup>                                          | Depth Accuracy <sup>3</sup>            | Seafloor Coverage | Typical Survey Characteristics <sup>5</sup>                                                                        |
| A1               | ± 5 m + 5% depth                                                        | = 0.50 + 1% d                          |                   | Full area search undertaken. Significant seafloor features detected <sup>4</sup> and depths measured.              |
|                  |                                                                         | Depth (m)                              | Accuracy (m)      |                                                                                                                    |
|                  |                                                                         | 10                                     | ± 0.6             |                                                                                                                    |
|                  |                                                                         | 30                                     | ± 0.8             |                                                                                                                    |
| A2               | ± 20 m                                                                  | = 1.00 + 2% d                          |                   | Full area search undertaken. Significant seafloor features detected <sup>4</sup> and depths measured.              |
|                  |                                                                         | Depth (m)                              | Accuracy (m)      |                                                                                                                    |
|                  |                                                                         | 10                                     | ± 1.2             |                                                                                                                    |
|                  |                                                                         | 30                                     | ± 1.6             |                                                                                                                    |
| B                | ± 50 m                                                                  | = 1.00 + 2% d                          |                   | Full area search not achieved; uncharted features, hazardous to surface navigation are not expected but may exist. |
|                  |                                                                         | Depth (m)                              | Accuracy (m)      |                                                                                                                    |
|                  |                                                                         | 10                                     | ± 1.2             |                                                                                                                    |
|                  |                                                                         | 30                                     | ± 1.6             |                                                                                                                    |
| C                | ± 500 m                                                                 | = 2.00 + 5% d                          |                   | Full area search not achieved, depth anomalies may be expected.                                                    |
|                  |                                                                         | Depth (m)                              | Accuracy (m)      |                                                                                                                    |
|                  |                                                                         | 10                                     | ± 2.5             |                                                                                                                    |
|                  |                                                                         | 30                                     | ± 3.5             |                                                                                                                    |
| D                | Worse than <b>zone of confidence C</b>                                  | Worse than <b>zone of confidence C</b> |                   | Full area search not achieved, large depth anomalies may be expected.                                              |
|                  |                                                                         | Depth (m)                              | Accuracy (m)      |                                                                                                                    |
|                  |                                                                         | 100                                    | ± 7.0             |                                                                                                                    |
|                  |                                                                         | 1000                                   | ± 52.0            |                                                                                                                    |
| U                | Unassessed – The quality of the bathymetric data has yet to be assessed |                                        |                   | Poor quality data or data that cannot be quality assessed due to lack of information.                              |

**To decide on a ZOC Category, all conditions outlined in columns 2 to 4 of the Table must be met.**

Explanatory notes quoted in the Table:

<sup>1</sup> The allocation of a Zone of Confidence (ZOC) indicates that particular data meets minimum criteria for position and depth accuracy and seafloor coverage defined in this Table. ZOC categories reflect a charting standard and not just a hydrographic survey standard. Depth and position accuracies specified for each ZOC category refer to the errors of the final depicted soundings and include not only survey errors but also other errors introduced in the chart production process. Data is further qualified in Meta Feature Type **Quality of Bathymetric Data** (see clause 3.8) and associated Information Type **Spatial Quality** (see clause 24.5) attributes as follows:

a) Positional Accuracy (**horizontal position uncertainty**) and Sounding Accuracy (**vertical uncertainty**) on the associated instance of **Spatial Quality** may be used to indicate that a higher position or depth accuracy has been achieved than defined in this Table (for example a survey where full seafloor coverage was not achieved could not be classified higher than ZOC B; however, if the position accuracy was, for instance,  $\pm 15$  metres, the attribute **horizontal position uncertainty** could be used to indicate this).

b) Swept areas where the clearance depth is accurately known but the actual seabed depth is not accurately known may be accorded a 'higher' ZOC (that is, A1 or A2) providing positional and depth accuracies of the swept depth meets the criteria in this Table. In this instance, the attribute **depth range minimum value** on the **Quality of Bathymetric Data** feature may be used to specify the swept depth. The position accuracy criteria apply to the boundaries of swept areas.

c) The complex attribute **survey date range** on the **Quality of Bathymetric Data** feature is used to indicate the start and end dates of the survey(s) covering the area.

<sup>2</sup> Position Accuracy of depicted soundings at 95% CI (2.45 sigma) with respect to the given datum. It is the cumulative error and includes survey, transformation and digitizing errors etc. Position accuracy need not be rigorously computed for ZOCs B, C and D but may be estimated based on type of equipment, calibration regime, historical accuracy etc.

<sup>3</sup> Depth accuracy of depicted soundings =  $a + (b \cdot d)/100$  at 95% CI (2.00 sigma), where d = depth in metres at the critical depth. Depth accuracy need not be rigorously computed for ZOCs B, C and D but may be estimated based on type of equipment, calibration regime, historical accuracy etc.

<sup>4</sup> Significant seafloor features are defined as those rising above depicted depths by more than:

|    | <u>Depth</u> | <u>Significant Feature</u> |
|----|--------------|----------------------------|
| a. | <40 m        | 2 m                        |
| b. | >40 m        | 10% depth                  |

A full seafloor search indicates that a systematic survey was conducted using detection systems, depth measurement systems, procedures, and trained personnel designed to detect and measure depths on significant seafloor features. Significant features are included on the chart as scale allows. It is impossible to guarantee that no significant feature could remain undetected, and significant features may have become present in the area since the time of the survey.

<sup>5</sup> Typical Survey Characteristics – these descriptions should be seen as indicative examples only.

<sup>6</sup> Controlled, systematic surveys (ZOC A1, A2 and B) – surveys comprising planned survey lines, on a geodetic datum that can be transformed to WGS 84.

<sup>7</sup> Modern survey echo sounder – high precision single beam depth measuring equipment, generally including all survey echo sounders designed post 1970.

## 27.103 city name

IHO Definition: **CITY NAME**. The name of a town or city.

Attribute Type: Text

Remarks:

- The attribute **city name** should contain no more than 100 characters.

### 27.104 class of dangerous cargo (clsdng)

IHO Definition: Class of dangerous cargo.

1) **One Blue Light / Cone**

IHO Definition: Vessels carrying out transport operations involving certain flammable substances.

2) **Two Blue Lights / Cones**

IHO Definition: Vessels carrying out transport operations involving certain substances constituting health hazards.

3) **Three Blue Lights / Cones**

IHO Definition: Vessels carrying out transport operations involving certain explosives.

4) **No Blue Light / Cone**

IHO Definition: Vessels carrying out transport operations for which no blue light or blue cone is required.

5) **One Red Light / Red Cone Top Down**

IHO Definition: Russian inland waterway regulations: Vessels with one red light / red cone top down.

Remarks:

No remarks.

### 27.105 colour (COLOUR)

IHO Definition: **COLOUR.** The property possessed by an object of producing different sensations on the eye as a result of the way it reflects or emits light.

Attribute Type: Enumeration

1) **white**

2) **black**

3) **red**

4) **green**

5) **blue**

6) **yellow**

7) **grey**

8) **brown**

9) **amber**

10) **violet**

11) **orange**

12) **magenta**

13) **pink**

Remarks:

No remarks.

## 27.106 colour pattern (COLPAT)

**IHO Definition:** **COLOUR PATTERN.** A regular repeated design containing more than one colour.

**Attribute Type:** Enumeration

### 1) **horizontal stripes**

**IHO Definition:** Straight bands or stripes of differing colours oriented horizontally. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

### 2) **vertical stripes**

**IHO Definition:** Straight bands or stripes of differing colours oriented vertically. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

### 3) **diagonal stripes**

**IHO Definition:** Straight bands or stripes of differing colours oriented diagonally (that is, not horizontally or vertically). (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

### 4) **squared**

**IHO Definition:** Often referred to as checker plate, where alternate colours are used to create squares similar to a chess or draught board. The pattern may be straight or diagonal. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

### 5) **stripes (direction unknown)**

**IHO Definition:** Straight bands or stripes of differing colours oriented in an unknown direction. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

### 6) **border stripe**

**IHO Definition:** A band or stripe of colour which is displayed around the outer edge of the feature, which may also form a border to an inner pattern or plain colour. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.113, November 2000).

**Remarks:**

No remarks.

## 27.107 communication channel (COMCHA)

**IHO Definition:** **COMMUNICATION CHANNEL.** A channel number assigned to a specific radio frequency, frequencies or frequency band. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.114, November 2000).

**Attribute Type:** Text

**Expected input:** Enter specific Communication Channel.

**Indication:** Each Channel must be indicated in square brackets by 4 digits and up to 4 characters (A-Z).

**Format:** [XXXXXXXX] (7 to 10 characters (mandatory))

**Example:** [VHF0007] for VHF-Channel 7

[NBDP5555] for Narrow Band Direct Printing Channel 5555

**Remarks:**

- The attribute "communication channel" encodes the various Channels used for all methods of radio communication.

## 27.108 condition (CONDTN)

**IHO Definition:** **CONDITION.** The various conditions of buildings and other constructions.

**Attribute Type:** Enumeration

1) **under construction**

IHO Definition: Being built but not yet capable of function. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

2) **ruined**

IHO Definition: A structure in a decayed or deteriorated condition resulting from neglect or disuse, or a damaged structure in need of repair. (IHO Dictionary – S-32).

3) **under reclamation**

IHO Definition: An area of the sea, a lake or the navigable part of a river that is being reclaimed as land, usually by the dumping of earth and other material. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.118, November 2000).

4) **wingless**

IHO Definition: A windmill or wind turbine from which the vanes or turbine blades are missing. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.118, November 2000).

5) **planned construction**

IHO Definition: Detailed planning has been completed but construction has not been initiated. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Remarks:

- The attribute “condition” encodes the various conditions of buildings and other constructions. The default “condition” should be considered to be completed, undamaged and working normally. This attribute should, therefore, only be used to indicate features whose condition is anything other than “normal”.

**27.109 contact instructions**

IHO Definition: **CONTACT INSTRUCTIONS.** Instructions provided on how to contact a particular person, organisation or service.

Attribute Type: Text

Remarks:

- Where required, **contact instructions** should also provide information on the access times for a particular person, organisation or service.
- The attribute **contact instructions** should contain no more than 300 characters.

**27.110 country name**

IHO Definition: **COUNTRY NAME.** The name of a nation.

Attribute Type: Text

Remarks:

- The attribute **country name** should contain no more than 150 characters.

**27.111 current velocity at high water level (curvhw)**

IHO Definition: The rate of travel of a current at a high water level.

Attribute Type: Real

Unit: kilometre per hour (km/h)

Precision: 0·1km/h

Minimum range: 0

Example: 10 for a current velocity of 10 km/h at high water level

Remarks:

No remarks.

### 27.112 current velocity at low water level (curvlw)

IHO Definition: The rate of travel of a current at a low water level.

Attribute Type: Real

Unit: kilometre per hour (km/h)

Precision: 0·1km/h

Minimum range: 0

Example: 5 for a current velocity of 5 km/h at low water level

Remarks:

•No remarks.

### 27.113 current velocity at mean water level (curvmw)

IHO Definition: The rate of travel of a current at a mean water level.

Attribute Type: Real

Unit: kilometre per hour (km/h)

Precision: 0·1km/h

Minimum range: 0

Example: 7.5 for a current velocity of 7.5 km/h at mean water level

Remarks:

•No remarks.

### 27.114 current velocity at other water level (curvow)

IHO Definition: The rate of travel of a current at an other water level.

Attribute Type: Real

Unit: kilometre per hour (km/h)

Precision: 0·1km/h

Minimum range: 0

Example: 8.5 for a current velocity of 8.5 km/h at an other water level

Remarks:

•No remarks.

## 27.115 date disused

IHO Definition: **DATE DISUSED.** The date that an entity ceases to be used. (Adapted from S-4).

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

Format: YYYYMMDD (full date, **mandatory**)  
 YYYYMM-- (no specific day required – **mandatory**)  
 YYYY---- (no specific month required – **mandatory**)

Example: **20160908** for 08 September 2016 as the date an entity ceased to be used.

Remarks:

No remarks.

## 27.116 date end (DATEND, PEREND, SUREND)

IHO Definition: **DATE END.** The latest date on which an object (for example a buoy) will be present.

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

Format: YYYYMMDD (full date, **mandatory**)  
 YYYYMM-- (no specific day required – **mandatory**)  
 YYYY---- (no specific month required – **mandatory**)  
 ----MMDD (same day each year, **mandatory**)  
 ----MM-- (same month each year, **mandatory**)

Example: **20101203** for 03 December 2010 at 240000 hours as ending date.

**----02--** for 28 February at 240000 hours as ending date for non-leap years; and 29 February at 240000 hours as ending date for leap years.

Remarks:

- The attribute **date end** indicates the latest date of an event or the end of a date range. This attribute is used to indicate the end of a fixed date range, the end of a periodic date range, or the removal or cancellation of a feature at a specific date in the future.

## 27.117 date fixed

IHO Definition: **DATE FIXED.** The date of an event.

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

Format: ----MMDD (same day each year, **mandatory**)

----MM-- (same month each year, **mandatory**)

Example: ----0908 for 08 September each year.  
 ----02-- for February of each year.

Remarks:  
 No remarks.

## 27.118 date start (DATSTA, PERSTA, SURSTA)

IHO Definition: **DATE START.** The earliest date on which an object (for example a buoy) will be present.

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

Format: YYYYMMDD (full date, **mandatory**)  
 YYYYMM-- (no specific day required – **mandatory**)  
 YYYY---- (no specific month required – **mandatory**)  
 ----MMDD (same day each year, **mandatory**)  
 ----MM-- (same month each year, **mandatory**)

Example: 20101129 for 29 November 2010 at 000000 hours as starting date.  
 ----02-- for 01 February at 000000 hours annually as starting date.

Remarks:

- The attribute **date start** indicates the earliest date of an event or the start of a date range. This attribute is used to indicate the start of a fixed date range, the start of a periodic date range, or the deployment or implementation of a feature at a specific date in the future.

## 27.119 date variable

IHO Definition: **DATE VARIABLE.** A day which is not fixed in the Gregorian calendar.

Attribute Type: Text

Indication: The string encodes a recurring day each year that is not fixed in the Gregorian calendar.

Example: **Fourth Thursday in November**  
**Easter Sunday**

Remarks:

- The attribute **date variable** should contain no more than 150 characters.

## 27.120 day of week

IHO Definition: **DAY OF WEEK.** Any one of seven days in a week.

Attribute Type: Enumeration

### 1) Sunday

IHO Definition: The day of the week following Saturday and preceding Monday.

### 2) Monday

IHO Definition: The day of the week following Sunday and preceding Tuesday.

### 3) Tuesday

IHO Definition: The day of the week following Monday and preceding Wednesday.

4) **Wednesday**

IHO Definition: The day of the week following Tuesday and preceding Thursday.

5) **Thursday**

IHO Definition: The day of the week following Wednesday and preceding Friday.

6) **Friday**

IHO Definition: The day of the week following Thursday and preceding Saturday.

7) **Saturday**

IHO Definition: The day of the week following Friday and preceding Sunday.

Remarks:

No remarks.

**27.121 day of week is range**

IHO Definition: **DAY OF WEEK IS RANGE.** A statement expressing if the days of the week identified define a range or not.

Attribute Type: Boolean

Indication: A True value is an indication that the identified days of the week define a range between and inclusive of those days.

Remarks:

No remarks.

**27.122 delivery point**

IHO Definition: **DELIVERY POINT.** Details of where post can be delivered such as the apartment, name and/or number of a street, building or PO Box.

Attribute Type: Text

Remarks:

- The attribute **delivery point** should contain no more than 200 characters.

**27.123 depth range maximum value (DRVAL2)**

IHO Definition: **DEPTH RANGE MAXIMUM VALUE.** The maximum (deepest) value of a depth range. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.125, November 2000).

Attribute Type: Real

Unit: Metre (m)

Precision: 0.1m

Minimum range: -30

Maximum range: 12500

Range closure: Open interval (*minimum < **depth range maximum** < maximum*)

Example: **100** for a maximum depth of 100 metres  
**-0.5** for a deepest drying depth of 0.5 metres

Remarks:

- Depth range is the depth from a specified sounding datum as a depth interval bounded by the minimum (shoalest) and maximum (deepest) depth values. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).
- Where the area dries, the value is negative or zero (0).

### 27.124 depth range minimum value (DRVAL1)

IHO Definition: **DEPTH RANGE MINIMUM VALUE.** The minimum (shoalest) value of a depth range. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.124, November 2000).

Attribute Type: Real

Unit: Metre (m)

Precision: 0.1m

Minimum range: -30

Maximum range: 12500

Range closure: Open interval (*minimum < **depth range minimum** < maximum*)

Example: **50** for a minimum depth of 50 metres  
**-3.5** for a minimum drying depth of 3.5 metres

Remarks:

- Depth range is the depth from a specified sounding datum as a depth interval bounded by the minimum (shoalest) and maximum (deepest) depth values. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).
- Where the area dries, the value is negative.

### 27.125 description of legal conditions (lg\_des)

IHO Definition: Additional textual information which is related to the numerical description of the particular article/clause of the applicable law/regulation.

Remarks:

- Describes the details of legal conditions or indicates where detailed information can be found

### 27.126 destination

IHO Definition: **DESTINATION.** The place or general direction to which a vessel is going or directed.

Attribute Type: Text

Indication:

Remarks:

- The attribute **destination** should contain no more than 100 characters.

### 27.127 direction of impact (dirimp)

IHO Definition: Direction of impact.

#### 1) Upstream

IHO Definition: Toward the source of a stream.

#### 2) Downstream

IHO Definition: In the direction of flow of a current or stream

**3) To the Left Bank**

IHO Definition: Toward the left side of the bank.

**4) To the Right Bank**

IHO Definition: Toward the right side of the bank.

**5) To Harbour**

IHO Definition: To a harbour.

Remarks:

No remarks.

**27.128 distance from notice mark, first (disbk1)**

IHO Definition: Minimum distance of the impact of an area, which is signed by notice marks. The distance is measured from the notice mark rectangular to the bank.

Attribute Type: Real

Unit: Metre (m)

Precision: 0.1m

Minimum range: 0.1

Example: 15 for a minimum distance from the notice mark of 15 metres

Remarks:

No remarks.

**27.129 distance from notice mark, second (disbk2)**

IHO Definition: Maximum distance of the impact of an area, which is signed by notice marks. The distance is measured from the notice mark rectangular to the bank.

Attribute Type: Real

Unit: Metre (m)

Precision: 0.1m

Minimum range: 0.1

Example: 50 for a maximum distance from the notice mark of 50 metres

Remarks:

No remarks.

### 27.130 distance mark visible (CATDIS)

IHO Definition: **DISTANCE MARK VISIBLE.** A statement indicating whether a distance mark is visible or not.

Attribute Type: Boolean

Indication: A True value is an indication that the distance mark is visible.

Remarks:

- A **Distance Mark** feature having attribute **distance mark visible** = *True* is required to be associated to a structure feature using the feature association **Structure/Equipment** (see clause 25.12).

### 27.131 distance of impact, downstream (disipd)

IHO Definition: Downstream distance of the impact of an area, which is signed by notice marks. The distance is normally given on an additional mark left and/or right of the notice mark.

Attribute Type: Real

Unit: Metre (m)

Precision: 1m

Minimum range: 1

Example: **500** for a distance of impact downstream of 500 metres

Remarks:

No remarks.

### 27.132 distance of impact, upstream (disipu)

IHO Definition: Upstream distance of the impact of an area, which is signed by notice marks. The distance is normally given on an additional mark left and/or right of the notice mark.

Attribute Type: Real

Unit: Metre (m)

Precision: 1m

Minimum range: 1

Example: **500** for a distance of impact upstream of 500 metres

Remarks:

No remarks.

### 27.133 distance unit of measurement

IHO Definition: **DISTANCE UNIT OF MEASUREMENT.** A specified amount of a quantity, as of length, by comparison with which any other quantity of the same kind is measured or estimated.

Attribute Type: Enumeration

- 1) **metres**

IHO Definition: The basic unit of length in the International System of Units (SI) system. (Adapted from IHO Dictionary – S-32).

2) **yards**

IHO Definition: A common unit of linear measure in English-speaking countries, equal to 3 feet or 36 inches, and equivalent to 0.9144 metre. (Adapted from Wikipedia).

3) **kilometres**

IHO Definition: A unit of length, the common measure of distances equal to 1000 metres, and equivalent to 3280.8 feet or 0.621 mile.

4) **statute miles**

IHO Definition: A unit equal to 5280 feet. (Merriam-Webster Dictionary – 2019).

5) **nautical miles**

IHO Definition: A unit of length equal to 1,852 metres. This value was approved by the International Hydrographic Conference of 1929 and has been adopted by nearly all maritime states. (IHO Dictionary – S-32).

7) **hectometres**

IHO Definition: Heights/lengths are specified in hectometres (100 metres).

Remarks:

No remarks.

## 27.134 dredged date

IHO Definition: **DREDGED DATE.** The date that dredging occurred.

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

Format: YYYYMMDD (full date, **mandatory**)  
 YYYYMM-- (no specific day required – **mandatory**)  
 YYYY---- (no specific month required – **mandatory**)

Example: **20101203** for 03 December 2010 as the dredged date.

Remarks:

- The attribute **dredged date** indicates the latest date of dredging (which may be the latest known date if the dredged area is not maintained), or the date of the latest control survey confirming the depth in a maintained dredged area.

## 27.135 elevation (ELEVAT)

IHO Definition: **ELEVATION.** The altitude of the ground level of a feature, measured from a specified vertical datum. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.127, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m).

Precision: 0.1m

Minimum range: 0

Maximum range: 8850

Range closure: Closed interval ( $minimum \leq \text{elevation} \leq maximum$ )

Example: **47** for an elevation of 47 metres

Remarks:  
No remarks.

### 27.136 elevation 1 of surface (m) (eleva1)

IHO Definition: The maximum elevation of the bottom of a river within a depth contour and referred to a gravitational reference level.

Attribute Type: Real

Unit: metre (m).

Precision: 0.1m

Minimum range: 0.0

Example: **47** for an elevation of 47 metres

Remarks:  
No remarks.

### 27.137 elevation 2 of surface (m) (eleva2)

IHO Definition: The minimum elevation of the bottom of a river within a depth contour and referred to a gravitational reference level.

Attribute Type: Real

Unit: metre (m).

Precision: 0.1m

Minimum range: 0.0

Example: **47** for an elevation of 47 metres

Remarks:  
No remarks.

### 27.138 elevation of water level (elevwl)

IHO Definition: Elevation of the water level of a specified feature point measured from the reference gravitational level defined in **reference gravitational level** (reflev).

Attribute Type: Real

Unit: metre (m)

Precision: 0.01m

Minimum range: 0

Minimum value: 0

Example: **240.05** for an elevation of the water level of 240.05 metres

Remarks:  
No remarks.

### 27.139 estimated range of transmission (ESTRNG)

**IHO Definition:** **ESTIMATED RANGE OF TRANSMISSION.** The estimated range of a non-optical electromagnetic transmission. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.128, November 2000).

**Attribute Type:** Real

**Unit:** Nautical mile (M)

**Precision:** 0.1M

**Minimum range:** 0

**Maximum range:** 1000

**Range closure:** Open interval (*minimum < **estimated range of transmission** < maximum*)

**Example:** 45 for a maximum range of 45 nautical miles

**Remarks:**

- The estimated range (distance) assumes “in vacuo” transmission and a standard antenna height of 5 metres. Thus it gives a hint to the boatmaster whether they are likely to receive transmission at a certain distance from a feature carrying this attribute.

### 27.140 exhibition condition of light (EXCLIT)

**IHO Definition:** **EXHIBITION CONDITION OF LIGHT.** The outward display of the light.

**Attribute Type:** Enumeration

1) **light shown without change of character**

**IHO Definition:** A light shown throughout the 24 hours without change of character. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.129, November 2000).

2) **daytime light**

**IHO Definition:** A light which is only exhibited by day. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.129, November 2000).

3) **fog light**

**IHO Definition:** A light which is exhibited in fog or conditions of reduced visibility. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.129, November 2000).

4) **night light**

**IHO Definition:** A light which is only exhibited at night. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.129, November 2000).

**Remarks:**

No remarks.

### 27.141 exposition of sounding (EXPSOU)

**IHO Definition:** **EXPOSITION OF SOUNDING.** Indicates the relationship of the depth of a feature to the range of depth of the surrounding depth area.

**Attribute Type:** Enumeration

1) **within the range of depth of the surrounding depth area**

**IHO Definition:** The depth corresponds to the depth range of the surrounding depth area; that is, the depth is not shoaler than the minimum depth of the surrounding depth area or deeper than the maximum depth of the surrounding depth area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.130, November 2000).

2) **shoaler than the range of depth of the surrounding depth area**

IHO Definition: The depth is shoaler than the minimum depth of the surrounding depth area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.130, November 2000).

3) **deeper than the range of depth of the surrounding depth area**

IHO Definition: The depth is deeper than the maximum depth of the surrounding depth area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.130, November 2000).

Remarks:

- This attribute indicates features with a “value of sounding” not within the range of depth of the surrounding depth area. These features could be a potential danger for navigation.

## 27.142 file locator

IHO Definition: **FILE LOCATOR.** The location of a fragment of text or other information in a support file.

Attribute Type: Text

Indication: For S-401, the string encodes the location of a single fragment of text or other information contained in an IENC support file.

Example: **p-224.105(a)(1)**

Remarks:

No remarks.

## 27.143 file reference (*TXTDSC*, *NTXTDS*)

IHO Definition: **FILE REFERENCE.** The file name of an externally referenced text file. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.209, November 2000).

Attribute Type: Text

Indication: For S-401, the string encodes the file name of a single textual IENC support file that contains the textual information.

Format: **101CCCC00000000000.EEE** (See S-401 Main document, clause 11.4.3 (mandatory))

Remarks:

- The attribute **file reference** indicates that a file containing text extracted from relevant pilot books or nautical publications is available.
- The files referenced by **file reference** must be .TXT and may contain formatted text.
- The files referenced by this attribute generally contain long text strings.

## 27.144 flare bearing

IHO Definition: **FLARE BEARING.** The bearing about which the light flare symbol is rotated to be displayed in ECDIS.

Attribute Type: Integer

Indication: Indicates the bearing of the light flare to be included in the data for Inland ECDIS or ECS display purposes where different from the defaults. The value encoded corresponds to a bearing away from the position of the light.

Unit: Degree (°)

Minimum range: 0

Maximum range: 360

Range closure: Right half-open interval ( $minimum \leq \textbf{flare bearing} < maximum$ )

Example: **270** for an flare bearing of 270 degrees away from the light

Remarks:

- The attribute **flare bearing** may be populated to cartographically align light flares where it is required to display the flare at a different bearing from the default. For example, **flare bearing** may be populated to align the flare along a transit or leading line (noting that in such cases the bearing to be encoded will be the reciprocal (+/- 180° of the bearing encoded for the navigational line); or to avoid other important encoded information.
- The default bearing of a light flare (135°) is provided as a function of the S-401 Portrayal Catalogue. Where two all-around lights are collocated, one of the light flares is displayed at a bearing of 45°, also as a function of the S-401 Portrayal Catalogue, as follows:
  - If one of the lights is a white, yellow or orange light, it is displayed at a bearing of 45°.
  - If none of the lights is a white, yellow or orange light there is no preference.

### 27.145 flare stack

IHO Definition: **FLARE STACK**. A tall structure used for burning-off waste oil or gas. (IHO Dictionary – S-32).

Attribute Type: Boolean

Indication: A True value is an indication that the offshore platform contains a flare stack.

Remarks:

- The attribute **flare stack** is a statement expressing whether an offshore platform has a stack used for burning-off waste oil or gas or not.

### 27.146 frequency shore station receives

IHO Definition: **FREQUENCY SHORE STATION RECEIVES**. The shore station receiver frequency. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.187, November 2000).

Attribute Type: Integer

Unit: Hertz (Hz)

Minimum range: 0

Range closure: Left half-open ray ( $minimum < \textbf{frequency shore station receives}$ )

Example: **950000000** for a radio signal centred on 950 MHz

Remarks:

No remarks.

### 27.147 frequency shore station transmits (SIGFRQ)

IHO Definition: **FREQUENCY SHORE STATION TRANSMITS**. The shore station transmitter frequency. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.187, November 2000).

Attribute Type: Integer

Unit: Hertz (Hz)

Minimum range: 0

Range closure: Left half-open ray ( $minimum < \textbf{frequency shore station transmits}$ )

Example: **950000000** for a radio signal centred on 950 MHz

Remarks:

|             |
|-------------|
| No remarks. |
|-------------|

## 27.148 function (FUNCTN)

IHO Definition: **FUNCTION.** A specific role that describes a feature.

Attribute Type: Enumeration

### 2) **harbour-masters office**

IHO Definition: A local official who has charge of mooring and berthing of vessels, collecting harbour fees, etc. (Adapted from IHO Dictionary – S-32).

### 3) **customs office**

IHO Definition: Serves as a government office where customs duties are collected, the flow of goods are regulated and restrictions enforced, and shipments or vehicles are cleared for entering or leaving a country. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 4) **health office**

IHO Definition: The office which is charged with the administration of health laws and sanitary inspections. (Adapted from The New Shorter Oxford English Dictionary, 1993).

### 5) **hospital**

IHO Definition: An institution or establishment providing medical or surgical treatment for the ill or wounded. (The New Shorter Oxford English Dictionary, 1993).

### 6) **post office**

IHO Definition: The public department, agency or organisation responsible primarily for the collection, transmission and distribution of mail. (The New Shorter Oxford English Dictionary, 1993).

### 7) **hotel**

IHO Definition: An establishment, especially of a comfortable or luxurious kind, where paying visitors are provided with accommodation, meals and other services. (The New Shorter Oxford English Dictionary, 1993).

### 8) **railway station**

IHO Definition: A building with platforms where trains arrive, load, discharge and depart. (The New Shorter Oxford English Dictionary, 1993).

### 9) **police station**

IHO Definition: The headquarters of a local police force and that is where those under arrest are first charged. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 10) **water-police station**

IHO Definition: The headquarters of a local water-police force. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 11) **pilot office**

IHO Definition: The office or headquarters of pilots; the place where the services of a pilot may be obtained. (IHO Dictionary – S-32).

### 12) **pilot lookout**

IHO Definition: A distinctive structure or place on shore from which personnel keep watch upon events at sea or along the coast. (IHO Dictionary – S-32).

### 13) **bank office**

IHO Definition: An office for custody, deposit, loan, exchange or issue of money. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**14) headquarters for district control**

IHO Definition: The quarters of an executive officer (director, manager, etc.) with responsibility for an administrative area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.132, November 2000).

**15) transit shed/warehouse**

IHO Definition: A building or part of a building for storage of wares or goods. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**16) factory**

IHO Definition: A building or buildings with equipment for manufacturing; a workshop. (The New Shorter Oxford English Dictionary, 1993).

**17) power station**

IHO Definition: A stationary plant containing apparatus for large scale conversion of some form of energy (such as hydraulic, steam, chemical or nuclear energy) into electrical energy. (McGraw-Hill Dictionary of Scientific and Technical Terms, 3<sup>rd</sup> Edition, 1984).

**18) administrative**

IHO Definition: A building for the management of affairs. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**19) educational facility**

IHO Definition: An establishment for teaching and learning (for example school, college, university, etc). (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**20) church**

IHO Definition: A building for public Christian worship. (The New Shorter Oxford English Dictionary, 1993).

**21) chapel**

IHO Definition: A place for Christian worship other than a parish, cathedral or church, especially one attached to a private house or institution. (The New Shorter Oxford English Dictionary, 1993).

**22) temple**

IHO Definition: A building for public Jewish worship. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**23) pagoda**

IHO Definition: A Hindu or Buddhist temple or sacred building. (The New Shorter Oxford English Dictionary, 1993).

**24) shinto shrine**

IHO Definition: A building for public Shinto worship. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**25) buddhist temple**

IHO Definition: A building for public Buddhist worship. (Adapted from The New Shorter Oxford English Dictionary, 1993).

**26) mosque**

IHO Definition: A Muslim place of worship. (The New Shorter Oxford English Dictionary, 1993).

**27) marabout**

IHO Definition: A shrine marking the burial place of a Muslim holy man. (The New Shorter Oxford English Dictionary, 1993).

**28) lookout**

IHO Definition: Keeping a watch upon events at sea or along the coast. (Adapted from IHO Dictionary – S-32).

**29) communication**

IHO Definition: Transmitting and/or receiving electronic communication signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**30) television**

IHO Definition: A system for reproducing on a screen visual images transmitted (usually with sound) by radio signals. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**31) radio**

IHO Definition: Transmitting and/or receiving radio-frequency electromagnetic waves as a means of communication. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**32) radar**

IHO Definition: A method, system or technique of using beamed, reflected, and timed radio waves for detecting, locating, or tracking objects, and for measuring altitudes. (IHO Dictionary – S-32).

**33) light support**

IHO Definition: A structure serving as a support for one or more lights. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**34) microwave**

IHO Definition: Broadcasting and receiving signals using microwaves. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.133, November 2000).

**35) cooling**

IHO Definition: Generation of chilled liquid and/or gas for cooling purposes. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**36) observation**

IHO Definition: A place from which the surroundings can be observed but at which a watch is not habitually maintained. (Adapted from IHO Dictionary – S-32).

**37) timeball**

IHO Definition: A visual time signal in the form of a ball. (IHO Dictionary – S-32).

**38) clock**

IHO Definition: Instrument for measuring time and recording hours. (IHO Dictionary – S-32).

**39) control**

IHO Definition: Used to control the flow of traffic within a specified range of an installation. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**40) airship mooring**

IHO Definition: Equipment or structure to secure an airship. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**41) stadium**

IHO Definition: An arena for holding and viewing events. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**42) bus station**

IHO Definition: A building where buses and coaches regularly stop to take on and/or let off passengers, especially for long-distance travel. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**44) sea rescue control**

IHO Definition: A unit responsible for promoting efficient organization of search and rescue services and for coordinating the conduct of search and rescue operations within a search and rescue region. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

45) **observatory**

IHO Definition: A building designed and equipped for making observations of astronomical, meteorological, or other natural phenomena. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

46) **ore crusher**

IHO Definition: A building or structure used to crush ore.

47) **boathouse**

IHO Definition: A building or shed, usually built partly over water, for sheltering a boat or boats.

48) **pumping station**

IHO Definition: A facility to move solids, liquids or gases by means of pressure or suction. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2013).

Remarks:

No remarks.

## 27.149 function of notice mark (fnctnm)

IHO Definition: Function of a notice mark.

1) **Prohibition Mark**

IHO Definition: Marks which indicate a prohibition.

2) **Regulation Mark**

IHO Definition: Marks which indicate a regulation.

3) **Restriction Mark**

IHO Definition: Marks which indicate a restriction.

4) **Recommendation Mark**

IHO Definition: Marks which indicate a recommendation.

5) **Information Mark**

IHO Definition: Marks with general information.

Remarks:

No remarks.

## 27.150 function of sensor (fnctsn)

IHO Definition: Function of sensor.

1) **Reduce Bridge Lighting**

IHO Definition: Reduce decorative bridge lighting.

Remarks:

No remarks.

### 27.151 headline

**IHO Definition: HEADLINE.** Words set at the head of a passage or page to introduce or categorize. (Merriam-Webster Dictionary – 2012).

**Attribute Type:** Text

**Indication:** The string encodes the heading relevant to a text string or information contained in an IENC support file.

**Example:** **Description of table format for S-401 meta and geo features**

**Remarks:**

- The attribute **headline** should contain no more than 100 characters.

### 27.152 height (HEIGHT)

**IHO Definition: HEIGHT.** The value of the vertical distance to the highest point of the feature, measured from a specified vertical datum. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.134, November 2000).

**Attribute Type:** Real

**Unit:** Defined as an attribute in the IENC dataset metadata: metre (m)

**Precision:** 0.1m

**Minimum range:** 0

**Maximum range:** 8850

**Range closure:** Left half-open interval  $(\text{minimum} < \text{height} \leq \text{maximum})$

**Example:** **73** for a height of 73 metres

**Remarks:**

- Height must not be used for floating features.

### 27.153 horizontal clearance length

**IHO Definition: HORIZONTAL CLEARANCE LENGTH.** The length of a feature, such as a lock or basin, which is available for safe navigation. This may, or may not, be the same as the total physical length of the feature. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.137, November 2000).

**Attribute Type:** Real

**Unit:** Defined as an attribute in the IENC dataset metadata: metre (m)

**Precision:** 0.1m

**Minimum range:** 0

**Range closure:** Left half-open ray  $(\text{minimum} < \text{horizontal clearance length})$

**Example:** **75** for a horizontal clearance length of 75 metres

**Remarks:**

No remarks.

### 27.154 horizontal clearance value (HORCLR)

**IHO Definition: HORIZONTAL CLEARANCE VALUE.** The physical horizontal clearance distance between two points on a feature, such as a bridge span, dock, gate, lock or tunnel.

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **horizontal clearance value**)

Example: **125** for a horizontal clearance of 125 metres

Remarks:

No remarks.

### 27.155 horizontal clearance width

IHO Definition: **HORIZONTAL CLEARANCE WIDTH.** The width of a feature, such as a lock or basin, which is available for safe navigation. This may, or may not, be the same as the total physical width of the feature. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.137, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **horizontal clearance width**)

Example: **30** for a horizontal clearance width of 30 metres

Remarks:

No remarks.

### 27.156 horizontal length (HORLEN)

IHO Definition: **HORIZONTAL LENGTH.** A measurement of the longer of two linear axis. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **horizontal length**)

Example: **95** for a length of 95 metres

Remarks:

No remarks.

### 27.157 horizontal width (HORWID)

IHO Definition: **HORIZONTAL WIDTH.** A measurement of the shorter of two linear axis. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m  
Minimum range: 0  
Range closure: Left half-open ray (*minimum < **horizontal width***)  
Example: **12.6** for a width of 12.6 metres  
Remarks:  
 No remarks.

### 27.158 ice factor (ICEFAC)

IHO Definition: **ICE FACTOR.** The value of the maximum variation in the vertical clearance of an overhead cable due to an accumulation of ice. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.140, November 2000).  
Attribute Type: Real  
Unit: Defined as an attribute in the IENC dataset metadata: metre (m)  
Precision: 0.1m  
Minimum range: 0  
Maximum range: 20  
Range closure: Left half-open interval (*minimum < **ice factor** ≤ maximum*)  
Example: **2.5** for a reduction of 2.5 metres in the vertical clearance.  
Remarks:  
 No remarks.

### 27.159 IMO adopted (CATTSS)

IHO Definition: **IMO ADOPTED.** A defined maritime traffic route that has been adopted as an IMO routing measure. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.99, November 2000).  
Attribute Type: Boolean  
Indication: A True value is an indication that the routing measure has been adopted by the IMO.  
Remarks:  
 No remarks.

### 27.160 in dispute

IHO Definition: **IN DISPUTE.** A statement that expresses if an area is in a jurisdictional dispute.  
Attribute Type: Boolean  
Indication: A True value is an indication that the area defined is in jurisdictional dispute.  
Remarks:  
 No remarks.

### 27.161 interoperability identifier

IHO Definition: **INTEROPERABILITY IDENTIFIER.** A common unique identifier for entities which describe a single real-world feature, and which is used to identify instances of the feature in end-user systems where the

feature may be included in multiple data product types. (IHO Nautical Information Provision Working Group, 2023).

**Attribute Type:** Universal Resource Name (URN)

**Indication:** The identifier is encoded using the Maritime Resource Name (MRN) concept and namespace, administered by IALA, that follows the syntax and semantics for URNs specified in RFC 2141.

**Format:** `urn:mrn:[Organisational ID]:...:...` (mandatory)

**Example:** `urn:mrn:iho:mc:1234.5`

**Remarks:**

For further information regarding MRNs, see S-100 Part 3, clause 3-10.

### Inland specific Encoding Instructions:

The attribute **interoperability identifier** (see clause 27.161) should be used to encode a unique identifier of the respective feature. The unique identifier allows the connection of the information regarding the feature in the IENC with information provided by other services (e.g. AIS or Notices to Skippers). The attribute **interoperability identifier** can be encoded with a MRN in accordance with the rules of IALA or another organization or with a MRN specific for Inland ENCs.

The structure of the MRN for Inland ENCs is:

`urn:mrn:iehg:'<type>':'<type-specific-part>' '<type>':'<type-specific-part>'` has to be encoded in accordance with one of the following options:

#### a. <type> uuid

If the type uuid is used the <type-specific-part> has to be encoded with a UUID in accordance with [https://en.wikipedia.org/wiki/Universally\\_unique\\_identifier](https://en.wikipedia.org/wiki/Universally_unique_identifier).

**Example:**

`urn:mrn:iehg:uuid:123e4567-e89b-12d3-a456-426614174000`

#### b. <type> obj

If the type obj is used the <type-specific-part> has to be filled with `:<ISO 3166 Code>:<managed name spaces>`.

where <ISO 3166 Code> is the identifier defined by ISO 3166-1 alpha-2 codes for the representation of names of a country, territory, or area of geographical interest.

The national IENC authority (e.g. national IEHG member) must ensure, that the <managed name spaces> is unique within the domain, and that the syntax of the <managed name spaces> complies with the general MRN guidelines. The national IENC authority can assign codes to other national organizations that can manage their own namespaces.

**Examples:**

`urn:mrn:iehg:obj:us:fa:42.42`

In this example the fleeting area with identifier 42.42 defined by the USACE.

`urn:mrn:iehg:obj:be:dvw:lock123`

In this example the ISO 3166 code for Belgium is be. Within Belgium there are different local authorities and so a further identifier is used: dvw for Vlaamse Waterweg in this example where the Flemish lock identifier is lock123.

#### c. use of a type code for a specific type of objects as <type>

Any IEHG member can submit a request for a new <type> for a specific type of objects (e.g. lock, bridge) to IEHG via the IEHG discussion forum. The request has to contain the rules how to guarantee the uniqueness of the MRN that will be assigned for that <type>. It may for example be the rule to encode <ISO 3166 Code>:<managed name spaces> for the respective type of object (as described under Lb). The request should also define an area of applicability, e.g. one or more countries or a region. The request is adopted if

there is no veto within 6 weeks. The adopted types and the rules for the encoding will be published on <https://ienc.openecdis.org> and in the next version or edition of the Encoding Guide.

**d. use of a unique solution for a region as <type>**

If a region that does not have an ISO 3166 code agrees on a common namespace management it can submit a request for a new <type> to IEHG via the discussion forum. The request has to contain the rules how to ensure the uniqueness of the MRN that will be assigned for that <type>. The request should also define an area of applicability. The request is adopted if there is no veto within 6 weeks. The adopted types and rules for the encoding will be published on <https://ienc.openecdis.org> and in the next version or edition of the Encoding Guide.

In Europe the attribute has to be encoded:

- with an existing maritime MRN
- in accordance with letter a, <type> uuid , if no maritime MRN but a RIS-ID is available.

## 27.162 is MRCC

**IHO Definition: IS MRCC.** A statement that expresses if a Coast Guard station performs the function of a Maritime Rescue and Coordination Centre.

**Attribute Type:** Boolean

**Indication:** A True value is an indication that the encoded Coast Guard station performs the function of a Maritime Rescue and Coordination Centre.

**Remarks:**

No remarks.

## 27.163 jurisdiction (JRSDTN)

**IHO Definition: JURISDICTION.** The jurisdiction applicable to an administrative area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.142, November 2000).

**Attribute Type:** Enumeration

1) **international**

**IHO Definition:** Involving more than one country; covering more than one national area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.142, November 2000).

2) **national**

**IHO Definition:** An area administered or controlled by a single nation. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.142, November 2000).

3) **national sub-division**

**IHO Definition:** An area smaller than the nation in which it lies. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.142, November 2000).

**Remarks:**

No remarks.

## 27.164 language

**IHO Definition: LANGUAGE.** The method of human communication, either spoken or written, consisting of the use of words in a structured and conventional way.

**Attribute Type:** Text

Indication: The language is encoded by a character code following ISO 639-2/T.

Format: c3 (mandatory)

Example: **eng** for English

Remarks:

- The attribute **language** indicates the language of the specific text.

## 27.165 lifting capacity (LIFCAP)

IHO Definition: **LIFTING CAPACITY.** The specific safe lifting capacity of a feature. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.145, November 2000).

Attribute Type: Real

Unit: Tonne (t)

Precision: 0-1t

Minimum range: 0

Range closure: Left half-open ray (*minimum < **lifting capacity***)

Example: **120** for a lifting capacity of 120 tonnes

Remarks:

No remarks.

## 27.166 light characteristic (LITCHR)

IHO Definition: **LIGHT CHARACTERISTIC.** The distinct character, such as fixed, flashing, or occulting, which is given to each light to avoid confusion with neighbouring ones. (IHO Dictionary – S-32).

Attribute Type: Enumeration

### 1) **fixed**

IHO Definition: A signal light that shows continuously, in any given direction, with constant luminous intensity and colour. (IHO Dictionary – S-32).

### 2) **flashing**

IHO Definition: A rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness and all the appearances of light are of equal duration. (IHO Dictionary – S-32).

### 3) **long-flashing**

IHO Definition: A single-flashing light in which an appearance of light of not less than two seconds duration is regularly repeated. (IALA International Dictionary of Marine Aids to Navigation).

### 4) **quick-flashing**

IHO Definition: A rhythmic light in which flashes are repeated at a rate of not less than 50 flashes per minutes but less than 80 flashes per minutes. It may be:

- *Continuous quick-flashing:* A quick-flashing light in which a flash is regularly repeated.
  - *Group quick-flashing:* A quick-flashing light in which a group of two or more flashes, which are specified in number, is regularly repeated.
- (IALA International Dictionary of Marine Aids to Navigation).

### 5) **very quick-flashing**

IHO Definition: A rhythmic light in which flashes are repeated at a rate of not less than 80 flashes per minute but less than 160 flashes per minute. It may be:

- *Continuous very quick-flashing:* A very quick-flashing light in which a flash is regularly repeated.
- *Group very quick-flashing:* A very quick-flashing light in which a group of two or more flashes, which are specified in number, is regularly repeated.

(IALA International Dictionary of Marine Aids to Navigation).

6) **continuous ultra quick-flashing**

IHO Definition: A rhythmic light in which flashes are regularly repeated at a rate of not less than 160 flashes per minute. (IALA International Dictionary of Marine Aids to Navigation).

7) **isophased**

IHO Definition: A light with all durations of light and darkness equal. (IHO Dictionary – S-32).

8) **occulting**

IHO Definition: A rhythmic light in which the total duration of light in a period is clearly longer than the total duration of darkness and all the eclipses are of equal duration. It may be:

- *Single-occulting:* An occulting light in which an eclipse is regularly repeated.
- *Group-occulting:* An occulting light in which a group of two or more eclipses, which are specified in number, is regularly repeated.
- *Composite group-occulting:* An occulting light in which a sequence of groups of one or more eclipses, which are specified in number, is regularly repeated, and the groups comprise different numbers of eclipses.

(IALA International Dictionary of Marine Aids to Navigation).

9) **interrupted quick flashing**

IHO Definition: A quick light in which the sequence of flashes is interrupted by regularly repeated eclipses of constant and long duration. (Hydrographic Dictionary, Part I Volume I, English)

10) **interrupted very quick flashing**

IHO Definition: A light in which the very rapid alterations of light and darkness are interrupted at regular intervals by eclipses of long duration. (Hydrographic Dictionary, Part I Volume I, English)

11) **interrupted ultra quick-flashing**

IHO Definition: A light in which the ultra quick flashes (160 or more per minute) are interrupted at regular intervals by eclipses of long duration. (IHO Dictionary – S-32).

12) **morse**

IHO Definition: A rhythmic light in which appearances of light of two clearly different durations are grouped to represent a character or characters in the Morse code. (IHO Dictionary – S-32).

13) **fixed and flash**

IHO Definition: A rhythmic light in which a fixed light is combined with a flashing light of higher luminous intensity. (IHO Dictionary – S-32).

14) **flash and long-flash**

IHO Definition: A rhythmic light in which a flashing light is combined with a long-flashing light of higher luminous intensity. (Adapted from IHO Dictionary – S-32).

15) **occulting and flash**

IHO Definition: A rhythmic light in which an occulting light is combined with a flashing light of higher luminous intensity. (Adapted from IHO Dictionary – S-32).

16) **fixed and long-flash**

IHO Definition: A rhythmic light in which a fixed light is combined with a long-flashing light of higher luminous intensity. (Adapted from IHO Dictionary – S-32).

17) **occulting alternating**

IHO Definition: An alternating light in which the total duration of light in each period is clearly longer than the total duration of darkness and in which the intervals of darkness (occultations) are all of equal duration. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

18) **long-flash alternating**

IHO Definition: An alternating single-flashing light in which an appearance of light of not less than two seconds duration is regularly repeated. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

19) **flash alternating**

IHO Definition: An alternating rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness and all the appearances of light are of equal duration. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

20) **group alternating**

IHO Definition: Occulting light in which the occultations are combined in groups, each group including the same number of occultations, and in which the groups are repeated at regular intervals. (International Dictionary of Marine Aids to Navigation).

25) **quick-flash plus long-flash**

IHO Definition: A rhythmic light in which a group of quick flashes is followed by one or more long flashes in a regularly repeated sequence with a regular periodicity. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

26) **very quick-flash plus long-flash**

IHO Definition: A rhythmic light in which a group of very quick flashes is followed by one or more long flashes in a regularly repeated sequence with a regular periodicity. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

27) **ultra quick-flash plus long-flash**

IHO Definition: A rhythmic light in which a group of ultra quick flashes is followed by one or more long flashes in a regularly repeated sequence with a regular periodicity. (Adapted from IALA International Dictionary of Marine Aids to Navigation).

28) **alternating**

IHO Definition: A signal light that shows continuously, in any given direction, two or more colours in a regularly repeated sequence with a regular periodicity. (IALA International Dictionary of Marine Aids to Navigation).

29) **fixed and alternating flashing**

IHO Definition: A rhythmic light in which a fixed light is combined with a flashing light of higher luminous intensity and different colour.

Remarks:

- A selection of the above characteristics is defined and illustrated diagrammatically in IHO Chart Specifications, S-4 – B-471.2.

## 27.167 light visibility (LITVIS)

IHO Definition: **LIGHT VISIBILITY.** The specific visibility of a light, with respect to the light's intensity and ease of recognition.

Attribute Type: Enumeration

1) **high intensity**

IHO Definition: Non-marine lights with a higher power than marine lights and visible from well off shore (often "Aero" lights). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.148, November 2000).

2) **low intensity**

IHO Definition: Non-marine lights with lower power than marine lights. (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

3) **faint**

IHO Definition: A decrease in the apparent intensity of a light which may occur in the case of partial obstructions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.148, November 2000).

4) **intensified**

IHO Definition: A light in a sector is intensified (that is, has longer range than other sectors). (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

5) **unintensified**

IHO Definition: A light in a sector is unintensified (that is, has shorter range than other sectors). (Bundesamt für Seeschifffahrt und Hydrographie, Germany).

6) **visibility deliberately restricted**

IHO Definition: A light sector is deliberately reduced in intensity, for example to reduce its effect on a built-up area. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.148, November 2000).

7) **obscured**

IHO Definition: Said of the arc of a light sector designated by its limiting bearings in which the light is not visible from seaward. (IHO Dictionary – S-32).

8) **partially obscured**

IHO Definition: This value specifies that parts of the sector are obscured. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.148, November 2000).

9) **visible in line of range**

IHO Definition: Lights that must be in line to be visible.

Remarks:

- The attribute “light visibility” encodes the specific visibility of a light, with respect to the light's intensity and ease of recognition.

## 27.168 linkage

IHO Definition: **LINKAGE**. Location (address) for online access using a URL/URI address or similar addressing scheme. (Adapted from ISO 19115-1:2014).

Attribute Type: URI

Indication: Character encoding of a URI must follow the syntax rules defined in RFC 3986.

Format: **http://.....** or **https://.....** (mandatory)

Example: <https://www.iho.int>

Remarks:

- For S-401, the attribute type URI is constrained to conformance with the HTTP or HTTPS protocols; that is, the character string must commence with *http://* or *https://*.

## 27.169 major light

IHO Definition: **MAJOR LIGHT**. A statement expressing if a light is considered to be a major light in terms of ECDIS display in a particular area.

Attribute Type: Boolean

Indication: A True value is an indication that the light is considered to be a major light.

Remarks:

- The attribute **major light** is only intended to provide an indication to the Inland ECDIS or ECS that the light is considered to be an important light in terms of its display. As such this is a cartographic attribute to aid the

compiler in determining the most appropriate display for a light; it is not intended to be used as a formal classification method for lights.

### 27.170 marks navigational – system of (MARSYS)

**IHO Definition:** **MARKS NAVIGATIONAL – SYSTEM OF.** The system of navigational buoyage a region complies with.

**Attribute Type:** Enumeration

1) **IALA A**

**IHO Definition:** Navigational aids conform to the International Association of Lighthouse Authorities – IALA A system. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.149, November 2000).

2) **IALA B**

**IHO Definition:** Navigational aids conform to the International Association of Lighthouse Authorities – IALA B system. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.149, November 2000).

9) **no system**

**IHO Definition:** Navigational aids do not conform to any defined system. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.149, November 2000).

10) **other system**

**IHO Definition:** Navigational aids conform to a defined system other than International Association of Lighthouse Authorities - IALA. (IHO Transfer Standard for Digital Hydrographic Data, Appendix A: Object Catalogue - Description of the Feature Coding Schema to be Used for Hydrographic Requirements)

11) **main European inland waterway marking system**

**IHO Definition:** Navigational aids as required in international, national or regional regulations that contain the same navigational aids as the European Code for Inland Waterways of UNECE, or if there is no regulation for a waterway, navigational aids as recommended in the European Code for Inland Waterways of UNECE. (Inland ENC Harmonization Group (IEHG)).

12) **Russian inland waterway regulations**

**IHO Definition:** Navigational aids conform to the Russian inland waterway regulations. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

13) **Brazilian national inland waterway regulation**

**IHO Definition:** Navigational aids conform to the Brazilian national inland waterway regulation (Inland ENC Harmonization Group)

15) **Paraguay-Parana waterway – Brazilian complementary aids**

**IHO Definition:** Navigational aids conform to the Brazilian complementary aids on the Paraguay-Parana waterway. (Electronic Chart Display and Information System for Inland Navigation, Section 2: Data Standard, Appendix A: Object Catalogue for Inland ECDIS)

**Remarks:**

- For IENCs 10 (other system) shall only be used if none of the other enumerations is applicable.

### 27.171 maximal permitted beam (lg\_bme)

**IHO Definition:** The maximal permitted beam (width of a ship's hull) of a vessel or convoy according to the particular article/clause of the applicable law/regulation.

**Attribute Type:** Real

**Unit:** metre (m)

Precision: 0·01m

Minimum range: 0.01

Maximum range: 60Example: **11.40** for a maximal permitted beam of 11·40 metres

Remarks:

No remarks.

### 27.172 maximal permitted draught (lg\_drt)

IHO Definition: The maximal permitted draught of a vessel or convoy according to the particular article/clause of the applicable law/regulation.

Attribute Type: Real

Unit: metre (m)

Precision: 0·01m

Minimum range: 0.01

Maximum range: 50

Example: **2.50** for a maximal permitted draught of 2·50 metres

Remarks:

No remarks.

### 27.173 maximal permitted length (lg\_lgs)

IHO Definition: The maximal permitted length of a vessel or convoy according to the particular article/clause of the applicable law/regulation.

Attribute Type: Real

Unit: metre (m)

Precision: 0·01m

Minimum range: 0.01

Maximum range: 300

Example: **101.40** for a maximal permitted length of 101·40 metres

Remarks:

No remarks.

### 27.174 maximal permitted speed (lg\_spd)

IHO Definition: The maximal permitted vessel speed according to the particular article/clause of the applicable law/regulation.

Attribute Type: Real

Unit: kilometre per hour (km/h)

Precision: 0·1m

Minimum range: 0.1  
Maximum range: 99.9  
Example: **50.00** for a maximal permitted speed of 50 km/h

Remarks:  
 No remarks.

### 27.175 maximal permitted water displacement (lg\_wdp)

IHO Definition: The maximal permitted water displacement of a vessel or convoy according to the particular article/clause of the applicable law/regulation.

Attribute Type: Real

Unit: defined in the attribute **water displacement unit (lg\_wdu)**, see 27.278

Precision: 0.1m<sup>3</sup>

Minimum range: 0.1

Maximum range:Example: **1145.4** for a maximal permitted water displacement of 1145.4 cubic metres

Remarks:  
 No remarks.

### 27.176 maximum permitted draught

IHO Definition: **MAXIMUM PERMITTED DRAUGHT.** The maximum draught of a vessel permitted along a route, in a channel or dock, at a berth, or over a submerged feature.

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 30

Range closure: Left half-open interval  $(\text{minimum} < \text{maximum permitted draught} \leq \text{maximum})$

Example: **14.5** for a maximum permitted draught of 14.5 metres

Remarks:  
 No remarks.

### 27.177 maximum permitted vessel length

IHO Definition: **MAXIMUM PERMITTED VESSEL LENGTH.** The maximum length of a vessel permitted in a channel or dock, at a berth, or at an anchorage or mooring.

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left half-open ray  $(\text{minimum} < \text{maximum permitted vessel length})$

Example: **30.5** for a maximum permitted vessel length of 30.5 metres

Remarks:  
No remarks.

## 27.178 measured distance

IHO Definition: **MEASURED DISTANCE.** A course at sea, whose ends are indicated by ranges ashore, and whose length has been accurately measured for determining the speed of vessels. (IHO Dictionary – S-32).

Attribute Type: Integer

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **measured distance**)

Example: **1445** for a measured distance of 1445 metres

Remarks:  
No remarks.

## 27.179 minimum berth depth (DRVAL1)

IHO Definition: **MINIMUM BERTH DEPTH.** The least depth of the body of water at the berth or in a berth pocket adjacent to the berth. (IHO Nautical Information Provision Working Group, 2022).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 30

Range closure: Left half-open interval (*minimum* < **minimum berth depth** ≤ *maximum*)

Example: **14.6** for a minimum berth depth of 14.6 metres

Remarks:  
No remarks.

## 27.180 MMSI code

IHO Definition: **MMSI CODE.** The Maritime Mobile Service Identity (MMSI) Code is formed of a series of nine digits which are transmitted over the radio path in order to uniquely identify ship stations, ship earth stations, coast stations, coast earth stations, and group calls. These identities are formed in such a way that the identity or part thereof can be used by telephone and telex subscribers connected to the general telecommunications network principally to call ships automatically. (Adapted from Appendix 43 of the International Telecommunications Union Radio Regulations).

Attribute Type: Text

Indication: MMSI code (c...): String of nine characters.

Example: **366777490**

Remarks:  
- The attribute **MMSI code** must contain exactly 9 characters.

### 27.181 moiré effect

**IHO Definition:** **MOIRE EFFECT.** A short range (up to 2km) type of directional light. Sodium lighting gives a yellow background to a screen on which a vertical black line will be seen by an observer on the centre line. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.49, November 2000).

**Attribute Type:** Boolean

**Indication:** A True value is an indication that the encoded light is a moiré effect light.

**Remarks:**

No remarks.

### 27.182 multiplicity known

**IHO Definition:** **MULTIPLICITY KNOWN.** The number of features of identical character that exist as a co-located group is or is not known. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.150, November 2000).

**Attribute Type:** Boolean

**Indication:** A True value is an indication that the exact number of features is known.

**Remarks:**

No remarks.

### 27.183 name (*OBJNAM*, *NOBJNM*)

**IHO Definition:** **NAME.** The individual name of a feature. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.158, November 2000).

**Attribute Type:** Text

**Indication:** Name of feature (c...): String of characters.

**Format:** c...

**Example:** Monaco

**Remarks:**

- The attribute **name** encodes the individual name of a feature (see clause 2.5.8).
- The attribute **name** should contain no more than 75 characters.

### 27.184 name of other locally relevant water level (*othnam*)

**IHO Definition:** Name of the water level, which is used for the attribute valueAtOtherLocallyRelevantWaterLevel including version identification, for example year of issue or period.

**Attribute Type:** Text

**Indication:** Name of water level (c...): String of characters.

**Format:** c...

**Example:** HQ 100 2020

**Remarks:**

No remarks.

**27.185 name of relevant high water level (hignam)**

IHO Definition: Name of the water level, which is used for the attribute valueAtRelevantHighWaterLevel including version identification, for example year of issue or period.

Attribute Type: Text

Indication: Name of water level (c...): String of characters.

Format: c...

Example: **HSW 2020**

Remarks:

No remarks.

**27.186 name of relevant low water level (lownam)**

IHO Definition: Name of the water level, which is used for the attribute valueAtRelevantLowWaterLevel including version identification, for example year of issue or period.

Attribute Type: Text

Indication: Name of water level (c...): String of characters.

Format: c...

Example: **RNW 2020**

Remarks:

No remarks.

**27.187 name of relevant mean water level (meanam)**

IHO Definition: Name of the water level, which is used for the attribute valueAtRelevantMeanWaterLevel including version identification, for example year of issue or period.

Attribute Type: Text

Indication: Name of water level (c...): String of characters.

Format: c...

Example: **MW 2020**

Remarks:

No remarks.

**27.188 name of resource**

IHO Definition: **NAME OF RESOURCE.** Name of the online resource. (ISO 19115).

Attribute Type: Text

Indication: String of characters.

Format: c...

**Example: International Hydrographic Organization**Remarks:

- The attribute **name of resource** encodes the name of an online resource. The URL/URI for accessing the resource is populated using the attribute **linkage**.
- The attribute **name of resource** should contain no more than 100 characters.

**27.189 name usage**

IHO Definition: **NAME USAGE**. Classification of the type and display level of the name of a feature in an end-user system.

Attribute Type: Enumeration

**default name display**

IHO Definition: The name is intended to be displayed when the end-user system is set to the default name/text display setting.

**alternate name display**

IHO Definition: The name is intended to be displayed when the end-user system is set to an alternate name/text display setting, for example an alternate language.

Remarks:

- For Inland ECDIS or ECS, all encoded instances of the complex attribute **feature name** will be able to be viewed in the Inland ECDIS or ECS Pick Report, regardless of the value populated for **name usage**.

**27.190 name of sounding datum reference level (sdrlev)**

IHO Definition: Name of the water level depth values are referred to.

Attribute Type: Text

Indication: Name of sounding datum reference level (c...): String of characters.

Format: c...

Example: **reference low water level**

Remarks:

No remarks.

**27.191 name of vertical river datum reference level (vcrlev)**

IHO Definition: Name of the water level vertical clearance values are referred to.

Attribute Type: Text

Indication: Name of reference level for vertical measurements (c...): String of characters.

Format: c...

Example: **highest shipping height of water according to Danube Commission 2020**

Remarks:

- Name of reference level to which vertical clearances are referred (from **vertical datum** (verdat) list) plus version indication), e.g., HSW 2002

## 27.192 nationality (NATION)

**IHO Definition:** **NATIONALITY**. Identifier of membership of a particular nation. (Derived from Merriam-Webster Dictionary – 2018).

**Attribute Type:** Text

**Indication:** The nationality is encoded by a 2 character code following ISO 3166 (refer to S-57 Appendix A).

**Format:** c2 (mandatory)

**Example:** **AU** for Australia  
**US** for the United States of America

**Remarks:**

- The attribute “nationality” indicates the nationality of the specific feature.
- Where it is required to encode multiple nationalities relevant to a single feature (for example, for a maritime jurisdiction area that is in dispute between two Coastal States), this must be done by populating multiple instances of **nationality**.

## 27.193 nature of construction (NATCON)

**IHO Definition:** **NATURE OF CONSTRUCTION**. The building’s primary construction material.

**Attribute Type:** Enumeration

### 1) **masonry**

**IHO Definition:** Constructed of stones or bricks, usually quarried, shaped, and mortared. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 2) **concreted**

**IHO Definition:** Constructed of concrete, a material made of sand and gravel that is united by cement into a hardened mass used for roads, foundations, etc. (Adapted from the Illustrated Contemporary Dictionary, Encyclopedic Edition, 1978).

### 3) **loose boulders**

**IHO Definition:** Constructed from large stones or blocks of concrete, often placed loosely for protection against waves or water turbulence. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

### 4) **hard surfaced**

**IHO Definition:** Constructed with a surface of hard material, usually a term applied to roads surfaced with asphalt or concrete. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

### 5) **unsurfaced**

**IHO Definition:** Constructed with no extra protection, usually a term applied to roads not surfaced with a hard material. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

### 6) **wooden**

**IHO Definition:** Constructed from wood. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

### 7) **metal**

**IHO Definition:** Constructed from metal. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

### 8) **glass reinforced plastic**

**IHO Definition:** Constructed from a plastic material strengthened with fibres of glass. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.152, November 2000).

9) **painted**

IHO Definition: The application of paint to some other construction or natural feature. (IHO Transfer Standard for Digital Hydrographic Data, Appendix A: Object Catalogue - Description of the Feature Coding Schema to be Used for Hydrographic Requirements)

11) **latticed**

IHO Definition: A structure of crossed wooden or metal strips usually arranged to form a diagonal pattern of open spaces between the strips.

12) **glass**

IHO Definition: 1. Any artificial or natural substance having similar properties and composition, as fused borax, obsidian, or the like. 2. Something made of such a substance, as a windowpane.

Remarks:

No remarks.

**27.194 nature of surface (NATSUR)**

IHO Definition: **NATURE OF SURFACE.** The general material which the land surface or the seabed is composed.

Attribute Type: Enumeration

1) **mud**

IHO Definition: Soft, wet earth. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.153, November 2000).

2) **clay**

IHO Definition: (Particles of less than 0.002mm); stiff, sticky earth that becomes hard when baked. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.153, November 2000).

3) **silt**

IHO Definition: An unconsolidated sediment whose particles range in size from 0.0039 to 0.0625 millimetres in diameter (between clay and sand size). (IHO Dictionary – S-32).

4) **sand**

IHO Definition: Loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter. (IHO Dictionary – S-32).

5) **stone**

IHO Definition: A general term for rock and rock fragments ranging in size from pebbles and gravel to boulders or large rock masses. (IHO Dictionary – S-32).

6) **gravel**

IHO Definition: (Particles of 2.0 - 4.0mm); small stones with coarse sand. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.153, November 2000).

7) **pebbles**

IHO Definition: A small stone worn smooth and rounded by the action of water, sand, ice, etc. ranging in diameter between 4 and 64 millimetres. (IHO Dictionary – S-32).

8) **cobbles**

IHO Definition: A naturally rounded stone larger than a pebble. (IHO Dictionary – S-32).

9) **rock**

IHO Definition: Any formation of natural origin that constitutes an integral part of the lithosphere. The natural occurring material that forms firm, hard, and solid masses. (Adapted from IHO Dictionary – S-32).

11) **lava**

IHO Definition: The fluid or semi-fluid matter flowing from a volcano. The substance that results from the cooling of the molten rock. Part of the ocean bed is composed of lava. (IHO Dictionary – S-32).

14) **coral**

IHO Definition: Hard calcareous skeletons of many tribes of marine polyps. (IHO Dictionary – S-32).

17) **shells**

IHO Definition: The hard outside covering of an animal. Part of the ocean bed is composed of numerous shells of marine animals. (IHO Dictionary – S-32).

18) **boulder**

IHO Definition: A rounded rock with diameter of 256 millimetres or larger. (Adapted from IHO Dictionary – S-32).

Remarks:

- The attribute “nature of surface” encodes the general nature of the material of which the land surface or the seabed is composed.
- Mixed bottom: where the seabed comprises a mixture of material, the main constituent is given first for example fine sand with mud and shells would be indicated as 4,1,17.
- Mud, sand, stone, rock are terms used for the general description. Clay, silt, gravel, pebbles, cobbles are more specific terms related to particle size.

## 27.195 nature of surface – qualifying terms (NATQUA)

IHO Definition: **NATURE OF SURFACE – QUALIFYING TERMS.** The nature of various forms of natural surface materials in terms of their size, morphology and consistency.

Attribute Type: Enumeration

1) **fine**

IHO Definition: Falls within the smallest size continuum for a particular nature of surface term. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.155, November 2000).

2) **medium**

IHO Definition: Falls within the moderate size continuum for a particular nature of surface term. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.155, November 2000).

3) **coarse**

IHO Definition: Falls within the largest size continuum for a particular nature of surface term. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.155, November 2000).

4) **broken**

IHO Definition: Fractured or in pieces. (Adapted from Webster's II New Riverside Dictionary, 1984).

5) **sticky**

IHO Definition: Having an adhesive or glue like property. (Adapted from Webster's II New Riverside Dictionary, 1984).

6) **soft**

IHO Definition: Not hard or firm. (Adapted from Webster's II New Riverside Dictionary, 1984).

7) **stiff**

IHO Definition: Not pliant; thick, resistant to flow. (Adapted from Webster's II New Riverside Dictionary, 1984).

8) **volcanic**

IHO Definition: Composed of or containing material ejected from a volcano. (Adapted from Webster's II New Riverside Dictionary, 1984).

9) **calcareous**

IHO Definition: Composed of or containing calcium or calcium carbonate. (IHO Dictionary – S-32).

10) **hard**

IHO Definition: Firm; usually refers to an area of the seafloor not covered by unconsolidated sediment. (IHO Dictionary – S-32 and adapted from Webster's II New Riverside Dictionary, 1984).

Remarks:

- The attribute "nature of surface - qualifying terms" encodes the nature of various forms of natural surface materials in terms of their size, morphology and consistency.

**27.196 number of features**

IHO Definition: **NUMBER OF FEATURES.** The number of features of identical character that exist as a co-located group. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.150, November 2000).

Attribute Type: Integer

Unit: None

Minimum range: 2

Range closure: Left closed ray (*minimum ≤ number of features*)

Example: 3 for 3 co-located cables

Remarks:

- The attribute **number of features** must only be used to indicate the number of entities of a feature, where known, that are co-located (for example 3 overhead cables suspended over a body of water between 2 pylons), and this information is considered to be of use to the boatmaster. Where possible, features must be encoded individually.

**27.197 number of shore connectors**

IHO Definition: The number of shore connectors available at the power supply station.

Attribute Type: Integer

Minimum range: 1

Example: 4 for 4 shore connectors

Remarks:

No remarks.

**27.198 opening bridge (CATBRG)**

IHO Definition: **OPENING BRIDGE.** A bridge that is closed when set for carrying road traffic and open when set to permit marine traffic to pass through the waterway it crosses. Modern opening (movable) bridges are either bascule, vertical lift or swing. (Adapted from McGraw-Hill Encyclopedia of Science and Technology, 7th Edition, 1992).

Attribute Type: Boolean

Indication: A True value is an indication that one or more spans of the bridge are opening.

Remarks:

No remarks.

## 27.199 orientation value (ORIENT)

**IHO Definition: ORIENTATION VALUE.** The angular distance measured from true north to the major axis of the feature. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**Attribute Type:** Real

**Unit:** Degree (°)

**Precision:** 0.01°

**Minimum range:** 0

**Maximum range:** 360

**Range closure:** Right half-open interval ( $\text{minimum} \leq \text{orientation value} < \text{maximum}$ )

**Example:** **246.7** for an orientation value of 246.7 degrees

**Remarks:**

- An orientation quoted as 360° must be encoded as 0.

## 27.200 pictorial representation (PICREP)

**IHO Definition: PICTORIAL REPRESENTATION.** The file name of an externally referenced picture file. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.209, November 2000).

**Attribute Type:** Text

**Indication:** For S-401, the string encodes the file name of a single pictorial IENC support file (pixel/vector).

**Format:** **101CCCC000000000000.EEE** (See S-401 Main document, clause 11.4.3 (mandatory))

**Remarks:**

- The attribute **pictorial representation** indicates that a file containing an image is available.
- The “pictorial representation” image can, for example, be a drawing or a photo.
- The files referenced by **pictorial representation** must be .TIF or .JPG (see clause 2.4.12.2).

## 27.201 pilot movement

**IHO Definition: PILOT MOVEMENT.** Classification of pilot activity by arrival, departure, or change of pilot. It may also describe the place where the pilot's advice begins, ends, or is transferred to a different pilot.

**Attribute Type:** Enumeration

### 1) **embarkation**

**IHO Definition:** The place where vessels not being navigated according to a pilot's instructions pick up a pilot while in transit from sea to a port or constricted waters for future navigation under pilot instructions.

### 2) **disembarkation**

**IHO Definition:** The place where vessels being navigated under a pilot's instructions in transit from sea to a port or constricted waters drop the pilot and proceed without being subject to pilot instructions.

### 3) **pilot change**

**IHO Definition:** The place where vessels being navigated under a pilot's instructions drop off the pilot and pick up a different pilot for future navigation under pilot's instructions.

**Remarks:**

No remarks.

## 27.202 postal code

IHO Definition: **POSTAL CODE**. Known in various countries as a postcode, or ZIP code, the postal code is a series of letters and/or digits that identifies each postal delivery area.

Attribute Type: Text

Remarks:

- The attribute **postal code** should contain no more than 20 characters.

## 27.203 product (PRODCCT)

IHO Definition: **PRODUCT**. The various substances which are transported, stored or exploited.

Attribute Type: Enumeration

### 1) oil

IHO Definition: A thick, slippery liquid that will not dissolve in water, usually petroleum based in the context of storage tanks. (Adapted from the Oxford Minidictionary, Third Edition).

### 2) gas

IHO Definition: A substance with particles that can move freely, usually a fuel substance in the context of storage tanks. (Adapted from the Oxford Minidictionary, Third Edition).

### 3) water

IHO Definition: A colourless, odourless, tasteless liquid that is a compound of hydrogen and oxygen. (Adapted from the Oxford Minidictionary, Third Edition).

### 4) stone

IHO Definition: A general term for rock and rock fragments ranging in size from pebbles and gravel to boulders or large rock masses. (IHO Dictionary – S-32).

### 5) coal

IHO Definition: A hard black mineral that is burned as fuel. (Adapted from the Oxford Minidictionary, Third Edition).

### 6) ore

IHO Definition: A solid rock or mineral from which metal is obtained. (Adapted from the Oxford Minidictionary, Third Edition).

### 7) chemicals

IHO Definition: Any substance obtained by or used in a chemical process. (Adapted from the Oxford Minidictionary, Third Edition).

### 8) drinking water

IHO Definition: Water that is suitable for human consumption. (Adapted from the Oxford Minidictionary, Third Edition).

### 9) milk

IHO Definition: A white fluid secreted by female mammals as food for their young. (Adapted from the Oxford Minidictionary, Third Edition).

### 10) bauxite

IHO Definition: A mineral from which aluminum is obtained. (Adapted from the Oxford Minidictionary, Third Edition).

### 11) coke

IHO Definition: A solid substance obtained after gas and tar have been extracted from coal, used as a fuel. (Adapted from the Oxford Minidictionary, Third Edition).

**12) iron ingots**

IHO Definition: An oblong lump of cast iron metal. (Adapted from the Oxford Minidictionary, Third Edition).

**13) salt**

IHO Definition: Sodium chloride obtained from mines or by the evaporation of sea water. (Adapted from the Oxford Minidictionary, Third Edition).

**14) sand**

IHO Definition: Loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter. (IHO Dictionary – S-32).

**15) timber**

IHO Definition: Wood prepared for use in building or carpentry. (Adapted from the Oxford Minidictionary, Third Edition).

**16) sawdust/wood chips**

IHO Definition: Powdery fragments of wood made in sawing timber or coarse chips produced for use in manufacturing pressed board. (Adapted from the Oxford Minidictionary, Third Edition).

**17) scrap metal**

IHO Definition: Discarded metal suitable for being reprocessed. (Adapted from the Oxford Minidictionary, Third Edition).

**18) liquefied natural gas**

IHO Definition: Natural gas that has been liquefied for ease of transport by cooling the gas to -162 Celsius. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**19) liquefied petroleum gas**

IHO Definition: A compressed gas consisting of flammable light hydrocarbons and derived from petroleum. (Adapted from the Websters New World Dictionary).

**20) wine**

IHO Definition: The fermented juice of grapes. (Adapted from the Websters New World Dictionary).

**21) cement**

IHO Definition: A substance made of powdered lime and clay, mixed with water. (Adapted from the Websters New World Dictionary).

**22) grain**

IHO Definition: A small hard seed, especially that of any cereal plant such as wheat, rice, corn, rye etc. (Adapted from the Websters New World Dictionary).

**23) electricity**

IHO Definition: Electric charge or current.

**24) ice**

IHO Definition: The solid form of water. (IHO Dictionary – S-32).

**25) clay**

IHO Definition: (Particles of less than 0.002mm); stiff, sticky earth that becomes hard when baked. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.153, November 2000).

Remarks:

- The attribute “product” encodes the various substances which are transported, stored or exploited.

### 27.204 publication reference (lg\_pbr)

IHO Definition: Waterway or waterway section for which a juridical regulation with respect to the maximum permitted vessel dimensions exists.

Attribute Type: Text

Remarks:

No remarks.

### 27.205 radar band

IHO Definition: **RADAR BAND.** The band code character of the electromagnetic spectrum within which radar wave lengths lie.

Attribute Type: Text

Indication: Radar band (C).

Format: C (mandatory)

Example: X for the (X) - Band.

Remarks:

- Radar transponder beacons generally work on the 3cm (X) – Band or the 10cm (S) – Band wave lengths. Nevertheless, wave lengths outside the marine band are used.

### 27.206 radar conspicuous (CONRAD)

IHO Definition: **RADAR CONSPICUOUS.** A feature which returns a strong radar echo. (IHO Dictionary, S-32).

Attribute Type: Boolean

Indication: A True value is an indication that the feature returns a strong radar echo.

Default value: *False*

Remarks:

- **Radar conspicuous** applies to both features that themselves provide a strong radar echo; or return a strong radar echo as a result of being fitted with a radar reflector or a Radar Target Enhancer.

### 27.207 radius (RADIUS)

IHO Definition: **RADIUS.** The vector extending from the centre to the periphery of a circular or spherical feature. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.173, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left half-open ray (minimum < **radius**)

Example: 26 for a radius of 26 metres

Remarks:

No remarks.

## 27.208 reference gauge (refgag)

IHO Definition: The ISRS code of the gauge, or the acronym of the gauge, which can be used to calculate the vertical clearance.

Attribute Type: Text

Example: urn:mrn:iehg:uuid:123e4567-e89b-12d3-a456-42661417400

Remarks:

- EUR: If there is a gauge which can be used to do a reliable calculation of the vertical clearance of the referred feature under all navigation conditions, the ISRS Location Code of the gauge shall be encoded in the attribute **reference gauge** (refgag). When the attribute **interoperability identifier** of the gauge has been encoded (see **Fehler! Verweisquelle konnte nicht gefunden werden.**), the MRN of the gauge shall be encoded in the attribute **reference gauge** (refgag).
- US: If there is a gauge which can be used to calculate the vertical clearance of the referred feature, the gauge name acronym shall be encoded in the attribute **reference gauge** (refgag).

## 27.209 reference gravitational level

IHO Definition: Gravitational reference level.

### 1) Baltic Datum

IHO Definition: The unified State system for absolute heights reckoning from Kronshtadt Tide-gauge Datum that is accepted in Russian Federation.

### 2) Adriatic Level

IHO Definition: The average height of the surface of the Adriatic Sea at the tide station of Trieste in Italy.

### 3) Amsterdam Ordnance Datum (NAP)

IHO Definition: Dutch gravitational reference level that is approximately the average summer height of the North Sea.

### 4) Mean Sea Level

IHO Definition: The average height of the surface of the sea at a tide station for all stages of the tide over a 19-year period, usually determined from hourly height readings measured from a fixed predetermined reference level.

### 5) Other Datum

IHO Definition: Other gravitational reference level.

### 6) National Geodetic Vertical Datum - NGVD29

IHO Definition: The name, after May 10, 1973, of the Sea Level Datum of 1929.

### 7) North American Vertical Datum - NAVD88

IHO Definition: The vertical control datum established in 1991 by the minimum-constraint adjustment of the Canadian-Mexican-U.S. leveling observations.

### 8) Mean Sea Level 1912

IHO Definition: A vertical control datum established for vertical control in the United States by the general adjustment of 1912.

### 9) Mean Sea Level 1929

IHO Definition: A vertical control datum established for vertical control in the United States by the general adjustment of 1929.

### 10) Tweede Algemene Waterpassing

IHO Definition: All heights in Belgium are referenced to TAW.

Remarks:

No remarks.

## 27.210 reference location

IHO Definition: **REFERENCE LOCATION.** Information relating to the point of origin for a measured distance as indicated on a distance mark.

Attribute Type: Text

Indication: Reference location (c...).

Format: c...

Example: **Storey Bridge** for a distance mark marking a specified distance from Storey Bridge.

Remarks:

- The attribute **reference location** should contain no more than 75 characters.

## 27.211 reference tide

IHO Definition: **REFERENCE TIDE.** The reference tide to which the series of tidal stream values apply.

Attribute Type: Enumeration

### 1) **high water**

IHO Definition: The highest level reached at a place by the water surface in one oscillation. (IHO Dictionary – S-32).

### 2) **low water**

IHO Definition: The lowest level reached at a place by the water surface in one oscillation. (IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.212 reference tide type

IHO Definition: **REFERENCE TIDE TYPE.** The type of tide range (that is, mean spring tide, mean neap tide or mean tide) for which a set of tidal stream rates and directions apply.

Attribute Type: Enumeration

### 1) **springs**

IHO Definition: The tides of increased range occurring near the times of full moon and new moon. (IHO Dictionary, S-32).

### 2) **neaps**

IHO Definition: The tides of decreased range occurring near the times of first and last quarter.

### 3) **mean**

IHO Definition: The tides of mean range occurring between spring and neap tides.

Remarks:

No remarks.

### 27.213 reference year for magnetic variation (RYRMGV)

**IHO Definition:** **REFERENCE YEAR FOR MAGNETIC VARIATION.** The reference calendar year for magnetic variation values. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.176, November 2000).

**Attribute Type:** Truncated date

**Unit:** Four digit year indication (YYYY)

**Format:** YYYY----

**Example:** 2009----

**Remarks:**

- The dashes (----) must be included in all cases.

### 27.214 regulation citation

**IHO Definition:** **REGULATION CITATION.** The regulation citation for a feature.

**Attribute Type:** Text

**Indication:** Regulation citation (c...).

**Format:** c...

**Example:** CFR 33.88.810

**Remarks:**

- The attribute **regulation citation** should contain no more than 50 characters.

### 27.215 related issue (lg\_rel)

**IHO Definition:** Indication of the related legal issue.

#### 1) Other

**IHO Definition:** Being the one or ones distinct from that or those first mentioned or implied.

#### 2) Usage of Waterway

**IHO Definition:** An issue that is related to the usage of the waterway.

#### 3) Carriage of Equipment

**IHO Definition:** The legal issue for the vessel is related to the carriage of equipment.

#### 4) Task, Operation

**IHO Definition:** A usually assigned piece of work, or a specific work process, often to be finished within a certain time.

**Remarks:**

No remarks.

### 27.216 reported date (SORDAT)

**IHO Definition:** **REPORTED DATE.** The date that the item was observed, done, or investigated.

**Attribute Type:** Truncated date

**Indication:** Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific year, month and/or day is

required/known, indication of the year, month and/or day is omitted, and replaced with dashes (-). See also clause 2.4.8.

**Format:** YYYYMMDD (full date, **mandatory**)  
 YYYYMM-- (no specific day required – **mandatory**)  
 YYYY---- (no specific month required – **mandatory**)

**Example:** **20101129** for 29 November 2010 as the reported date.

**Remarks:**

- The attribute **reported date** indicates the date that information regarding a feature has been supplied to a Producing Authority.

## 27.217 restriction (RESTRN)

**IHO Definition: RESTRICTION.** The official legal statute of each kind of restricted area. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.179, November 2000).

**Attribute Type:** Enumeration

1) **anchoring prohibited**

**IHO Definition:** An area within which anchoring is not permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.177, November 2000).

2) **anchoring restricted**

**IHO Definition:** A specified area designated by appropriate authority, within which anchoring is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.177, November 2000).

3) **fishing prohibited**

**IHO Definition:** An area within which fishing is not permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.177, November 2000).

4) **fishing restricted**

**IHO Definition:** A specified area designated by appropriate authority, within which fishing is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.177, November 2000).

5) **trawling prohibited**

**IHO Definition:** An area within which trawling is not permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.177, November 2000).

6) **trawling restricted**

**IHO Definition:** A specified area designated by appropriate authority, within which trawling is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

7) **entry prohibited**

**IHO Definition:** An area within which navigation and/or anchoring is prohibited. (Adapted from IHO Dictionary – S-32).

8) **entry restricted**

**IHO Definition:** A specified area designated by appropriate authority, within which navigation is restricted in accordance with certain specified conditions. (Adapted from IHO Dictionary – S-32).

9) **dredging prohibited**

**IHO Definition:** An area within which dredging is not permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

10) **dredging restricted**

IHO Definition: A specified area designated by appropriate authority, within which dredging is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**11) diving prohibited**

IHO Definition: An area within which diving is not permitted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**12) diving restricted**

IHO Definition: A specified area designated by appropriate authority, within which diving is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**13) no wake**

IHO Definition: Mariners must adjust the speed of their vessels to reduce the wave or wash which may cause erosion or disturb moored vessels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**14) area to be avoided**

IHO Definition: An IMO declared routeing measure comprising an area within defined limits in which either navigation is particularly hazardous or it is exceptionally important to avoid casualties and which should be avoided by all ships, or certain classes of ships. (Adapted from IHO Dictionary – S-32).

**15) construction prohibited**

IHO Definition: The erection of permanent or temporary fixed structures or artificial islands is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**16) discharging prohibited**

IHO Definition: An area within which discharging or dumping is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**17) discharging restricted**

IHO Definition: A specified area designated by an appropriate authority, within which discharging or dumping is restricted in accordance with specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**18) industrial or mineral exploration/development prohibited**

IHO Definition: An area within which industrial or mineral exploration and development are prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**19) industrial or mineral exploration/development restricted**

IHO Definition: A specified area designated by an appropriate authority, within which industrial or mineral exploration and development is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**20) drilling prohibited**

IHO Definition: An area within which excavating a hole on the seabed with a drill is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**21) drilling restricted**

IHO Definition: A specified area designated by an appropriate authority, within which excavating a hole on the seabed with a drill is restricted in accordance with certain specified conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**22) removal of historical artefacts prohibited**

IHO Definition: An area within which the removal of historical artefacts is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**23) cargo transshipment (lightening) prohibited**

IHO Definition: An area in which cargo transshipment (lightening) is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**24) dragging prohibited**

IHO Definition: An area in which the dragging of anything along the seabed, for example bottom trawling, is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**25) stopping prohibited**

IHO Definition: An area in which a vessel is prohibited from stopping. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.178, November 2000).

**26) landing prohibited**

IHO Definition: An area in which landing is prohibited. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.179, November 2000).

**27) speed restricted**

IHO Definition: An area within which speed is restricted. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.179, November 2000).

**28) overtaking prohibited**

IHO Definition: A specified area designated by appropriate authority, within which overtaking is generally prohibited.

**29) overtaking of convoys by convoys prohibited**

IHO Definition: A specified area designated by appropriate authority, within which overtaking between convoys is prohibited.

**30) passing or overtaking prohibited**

IHO Definition: A specified area designated by appropriate authority, within which passing or overtaking is generally prohibited.

**31) berthing prohibited**

IHO Definition: A specified area designated by appropriate authority, within which vessels, assemblies of floating material or floating establishments may not berth.

**32) berthing restricted**

IHO Definition: A specified area designated by appropriate authority, within which berthing is restricted.

**33) making fast prohibited**

IHO Definition: A specified area designated by appropriate authority, within which vessels, assemblies of floating material or floating establishments may not make fast to the bank.

**34) making fast restricted**

IHO Definition: A specified area designated by appropriate authority, within which making fast to the bank is restricted.

**35) turning prohibited**

IHO Definition: A specified area designated by appropriate authority, within which all turning is generally prohibited.

**36) restricted fairway depth**

IHO Definition: An area within which the fairway depth is restricted.

**37) restricted fairway width**

IHO Definition: An area within which the fairway width is restricted.

**38) use of spuds prohibited**

IHO Definition: The use of anchoring spuds (telescopic piles) is prohibited.

39) **swimming prohibited**

IHO Definition: An area in which swimming is prohibited.

40) **SO<sub>x</sub> emission restricted**

IHO Definition: An area within which the emission of SO<sub>x</sub> is restricted.

41) **NO<sub>x</sub> emission restricted**

IHO Definition: An area within which the emission of NO<sub>x</sub> is restricted.

42) **power-driven vessels prohibited**

IHO Definition: An area within which any vessel propelled by machinery is prohibited. (Adapted from Convention on the International Regulations for Preventing Collisions at Sea, 1972).

43) **passing or overtaking of convoys by convoys prohibited**

IHO Definition: A specified area designated by appropriate authority, within which passing or overtaking of convoys by convoys is prohibited.

- Remarks:
- The official legal status of each kind of restricted area defines the kind of restriction(s), for example the restriction for a “game preserve” may be “entry prohibited”, the restriction for a “fish sanctuary” may be “fishing restricted”.
  - The complete information about the restriction(s), actually held in handbooks or other publications, may be encoded using the complex attribute **information** (see clause 2.4.6), sub-attribute **file reference**. A short explanation may be given by the use of **information**, sub-attribute **text**.

## 27.218 scale minimum (SCAMIN)

IHO Definition: **SCALE MINIMUM**. The minimum scale at which the feature may be used for example for ECDIS presentation.

Attribute Type: Integer

Indication: The modulus of the scale is indicated, that is 1:89 999 is encoded as 89999.

Unit: None

Minimum range: 999

Maximum range: 19999999

Range closure: Closed interval ( $minimum \leq \text{scale minimum} \leq maximum$ )

Example: If a particular minimum scale is specified as 1:89 999 (encoded as **89999**), and an example of a smaller scale would be 1:179 999 (encoded as **179999**).

The **scale minimum** value of a feature determines the display scale below which the feature is no longer displayed. Its purpose is to reduce clutter, to prioritise the display of features and to improve display speed. In encoding its value, the producing authority should consider these factors, as well as the scale at which the feature is no longer likely to be required for navigation.

In order to optimize the performance and clarity of the IENC, it is a mandatory requirement on IENCs that **scale minimum** is used.

Remarks:

- **scale minimum** only affects the display of a feature on an Inland ECDIS or ECSD, not its presence in the Electronic Navigational Data Service (ENDS).
- If **scale minimum** is not encoded, the feature is displayed at all scales.
- Where **scale minimum** is used, it must always be set to a scale less (that is, to a smaller scale) than the optimum display scale of the data as described in clause 2.5.5. Failure to follow this rule will mean that features will not be displayed on the Inland ECDIS or ECS until the overscale indication is activated. See clause 2.5.9, Table 2-6, for the list of mandatory **scale minimum** values.

- Skin of the Earth and Meta features must always be displayed. Therefore, **scale minimum** must not be encoded on Skin of the Earth and Meta features.
- If the same feature exists in datasets of different optimum display scales, the same **scale minimum** value must be assigned to each occurrence of the feature.

### 27.219 sector bearing (*SECTR1*, *SECTR2*)

**IHO Definition:** **SECTOR BEARING.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

**sector bearing** specifies the limit of the sector. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.184, November 2000).

**Attribute Type:** Real

**Unit:** Degree (°)

**Precision:** 0.01°

**Minimum range:** 0

**Maximum range:** 360

**Range closure:** Right half-open interval  $(\text{minimum} \leq \text{sector bearing} < \text{maximum})$

**Example:** **125** for a sector bearing of 125 degrees

**Remarks:**

- The values given to the common limits of adjacent sectors should be identical.
- The orientation of the bearing is from seaward to the central feature. This conforms with the method used in "List of Lights" publications.
- An orientation quoted as 360° must be encoded as 0.
- A generic term such as "to shore" cannot be used; a specific bearing must be encoded. Where a light sector limit is defined as "to the shore", it should be encoded using a value that ensures that, when the limit is drawn, it will fall entirely on land.

### 27.220 sector line length

**IHO Definition:** **SECTOR LINE LENGTH.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

**sector line length** specifies the displayed length of the line, in ground units, defining the limit of the sector.

**Attribute Type:** Real

**Unit:** Nautical mile (M)

**Precision:** 0.01M

**Minimum range:** 0

**Range closure:** Left half-open ray  $(\text{minimum} < \text{sector line length})$

**Example:** **5.15** for a sector line length of 5.15 nautical miles

**Remarks:**

- The attribute **sector line length** is used to override the default sector line length in Inland ECDIS or ECS for light sectors that are considered to be particularly critical to safe navigation.
- Sector lines should be displayed such that they cover the area where they are useful to boatmasters.
- Sector lines must not extend beyond the nominal range of the light sector.

### 27.221 signal duration

**IHO Definition: SIGNAL DURATION.** The time occupied by a single instance of light/sound or eclipse/silence in a signal sequence.

**Attribute Type:** Real

**Unit:** Seconds (s)

**Precision:** 0.01s

**Minimum range:** 0

**Maximum range:** 60

**Range closure:** Left half-open interval  $(\text{minimum} < \text{signal duration} \leq \text{maximum})$

**Example:** 2.5 for an duration of 2.5 seconds

**Remarks:**

No remarks.

### 27.222 signal frequency (SIGFRQ)

**IHO Definition: SIGNAL FREQUENCY.** The frequency of a signal. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.187, November 2000).

**Attribute Type:** Integer

**Unit:** Hertz (Hz)

**Minimum range:** 0

**Range closure:** Left half-open ray  $(\text{minimum} < \text{signal frequency})$

**Example:** 950000000 for a radio signal centred on 950 MHz

**Remarks:**

No remarks.

### 27.223 signal generation (SIGGEN)

**IHO Definition: SIGNAL GENERATION.** The mechanism used to generate a fog or light signal.

**Attribute Type:** Enumeration

#### 1) automatically

**IHO Definition:** Signal generation is initiated by a self regulating mechanism such as a timer or light sensor. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.188, November 2000).

#### 2) by wave action

**IHO Definition:** The signal is generated by the motion of the sea surface such as a bell in a buoy. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.188, November 2000).

#### 3) by hand

**IHO Definition:** The signal is generated by a manually operated mechanism such as a hand cranked siren. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.188, November 2000).

#### 4) by wind

**IHO Definition:** The signal is generated by the motion of air such as a wind driven whistle. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.188, November 2000).

#### 5) radio activated

IHO Definition: Activated by radio signal.

6) **call activated**

IHO Definition: Activated by making a call to a manned station.

Remarks:

- The attribute "signal generation" encodes the mechanism used to generate a fog signal.

## 27.224 signal group (SIGGRP)

IHO Definition: **SIGNAL GROUP.** The number of signals, the combination of signals or the Morse character(s) within one period of full sequence. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.189, November 2000).

Attribute Type: Text

Indication: The signal group of a light is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number.

A fixed light has no signal group.

Where no specific signal group is given for one of the light characteristics, this should be shown by an empty pair of brackets.

Format: (c)(c)...

Examples:

| <u>Light Characteristic</u> | <u>Signal Group</u> |
|-----------------------------|---------------------|
| VQ(6)+LFI ->                | <b>(6)(1)</b>       |
| LFI+FI(2+3) ->              | <b>(1)(2+3)</b>     |
| FI(2)+LFI ->                | <b>(2)(1)</b>       |
| FFI ->                      | <b>()(1)</b>        |
| Mo(AA) ->                   | <b>(AA)</b>         |
| AlFI(2W+1R) ->              | <b>(2+1)</b>        |
| AlLFIWR ->                  | <b>(1)</b>          |
| FOcW ->                     | <b>()(1)</b>        |
| AlOc(4)WR ->                | <b>(4)</b>          |
| AlWR ->                     | <b>()</b>           |
| Iso ->                      | <b>(1)</b>          |
| IQ ->                       | <b>()</b>           |

Remarks:

- In the above examples, where there is more than one group included in the rhythm of the light (for example (6)(1)), each group is encoded using a separate instance of **signal group**; in this case the first instance of **signal group** would be (6) and the second instance would be (1).
- The attribute **signal group** should contain no more than 15 characters.

## 27.225 signal period (SIGPER)

IHO Definition: **SIGNAL PERIOD.** The time occupied by an entire cycle of intervals of light and eclipse. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.190, November 2000).

Attribute Type: Real

Unit: Seconds (s)

Precision: 0.01s

Minimum range: 0

Maximum range: 120

Range closure: Left half-open interval (*minimum* < **signal period** ≤ *maximum*)

Example: 12 for an interval of 12 seconds

Remarks:

No remarks.

## 27.226 signal status

IHO Definition: **SIGNAL STATUS.** The indication of an element of a signal sequence being a period of light/sound or eclipse/silence.

Attribute Type: Enumeration

### 1) lit/sound

IHO Definition: The indication of an element of a signal sequence being a period of light or sound.

### 2) eclipsed/silent

IHO Definition: The indication of an element of a signal sequence being a period of eclipse or silence.

Remarks:

No remarks.

## 27.227 sounding datum reference level value

IHO Definition: Local value of the sounding datum reference level.

Attribute Type: Real

Unit: metre (m).

Precision: 0.1m

Minimum range: 0.0

Example: 4.5 for a sounding datum reference level of 4.5 m

Remarks:

No remarks.

## 27.228 Source (SORIND)

IHO Definition: **SOURCE.** The publication, document, or reference work from which information comes or is acquired.

Attribute Type: Text

Indication: String of characters.

Example: Public law No. 123/2025

Remarks:

- May be populated with the corresponding paper chart Notice to Mariners numbers, although other references are permitted.
- The attribute **source** should contain no more than 150 characters.

Inland specific encoding Instructions:

US: The format is: 2 character country code, 2 character authority code, 5 character source code, identifier (no restriction on number of characters).

- Examples:

- o For navigation features reference an authority such as the USCG Mississippi River System Light List, Volume 5: (US,U3,MS\_LL,2004\_Edition\_No.808)
- o For hydrographic features reference appropriate survey: (US,U3,SURVY,2001\_Hydro\_Survey)
- o For other features reference appropriate survey data: (US,U3,SURVY,1999\_Aerial\_Survey)

EUR: The format is: 2 character country code, other codes (no restriction on number of characters). All other coding is at the decision of the local authority.

BR: The format is: 2 character country code, description of the responsible authority (no restriction on number of characters).

## 27.229 source date

IHO Definition: The production date of the source; for example the date of measurement.

Attribute Type: Truncated date

Indication: Dates should be encoded using 4 digits for the calendar year (YYYY), 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). See also clause 2.4.8.

Format: YYYYMMDD (full date)

Example: **20101129** for 29 November 2010

Remarks:

No remarks.

## 27.230 source type

IHO Definition: Type of the source.

### 1) Law or Regulation

IHO Definition: Treaty, convention, or international agreement; law or regulation issued by a national or other authority.

### 2) Official Publication

IHO Definition: Publication not having the force of law, issued by an international organisation or a national or local administration.

### 7) Mariner Report, Confirmed

IHO Definition: Reported by mariner(s) and confirmed by another source.

### 8) Mariner Report, Not Confirmed

IHO Definition: Reported by mariner(s) but not confirmed.

### 9) Industry Publications and Reports

IHO Definition: Shipping and other industry publications, including graphics, charts and web sites.

### 10) Remotely Sensed Images

IHO Definition: Information obtained from satellite images.

### 11) Photographs

IHO Definition: Information obtained from photographs.

### 12) Products Issued by HO Services

IHO Definition: Information obtained from products issued by Hydrographic Offices.

### 13) News Media

IHO Definition: Information obtained from news media.

#### 14) **Traffic Data**

IHO Definition: Information obtained from the analysis of traffic data.

Remarks:

No remarks.

### 27.231 speed limit

IHO Definition: **SPEED LIMIT.** The maximum allowed rate of travel in an area.

Attribute Type: Real

Unit: Knot (kt); or defined by complex attribute **vessel speed limit**, sub-attribute **speed units**.

Precision: 0-1

Minimum range: 0

Maximum range: 35

Range closure: Left half-open interval  $(\text{minimum} < \text{speed limit} \leq \text{maximum})$

Example: **4.5** for a speed limit of 4.5 knots (or other speed unit of measure as defined by **speed units**)

Remarks:

No remarks.

### 27.232 speed maximum (CURVEL)

IHO Definition: **SPEED MAXIMUM.** Rate of motion. The terms speed and velocity are often used interchangeably, but speed is a scalar, having magnitude only, while velocity is a vector quantity, having both magnitude and direction. (Adapted from IHO Dictionary, S-32).

Speed maximum is the maximum rate of travel that can occur. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.121, November 2000).

Attribute Type: Real

Unit: Defined in **speed units**Precision: 0-1

Minimum range: 0

Maximum range: 35

Range closure: Left half-open interval  $(\text{minimum} < \text{speed maximum} \leq \text{maximum})$

Example: **2.1** for a maximum speed of 2.1

Remarks:

No remarks.

### 27.233 speed minimum

IHO Definition: **SPEED MINIMUM.** Rate of motion. The terms speed and velocity are often used interchangeably, but speed is a scalar, having magnitude only, while velocity is a vector quantity, having both magnitude and direction. (Adapted from IHO Dictionary, S-32).

Speed minimum is the minimum rate of travel that can occur. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.121, November 2000).

Attribute Type: Real

Unit: Defined in **speed units**

Precision: 0.1

Minimum range: 0

Maximum range: 20

Range closure: Left half-open interval  $(\text{minimum} < \text{speed minimum} \leq \text{maximum})$

Example: 1.6 for a maximum speed of 1.6

Remarks:

No remarks.

## 27.234 speed reference (lg\_spr)

IHO Definition: Indicates the type of speed measurement.

### 1) Other

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

### 2) Speed Over Ground

IHO Definition: The vessel's actual speed, determined by dividing the distance between successive fixes by the time between the fixes.

### 3) Speed Through Water

IHO Definition: The vessel's actual speed, determined by subtracting the speed over ground by the current speed.

Remarks:

No remarks.

## 27.235 speed units

IHO Definition: **SPEED UNITS**. The units for description of speed. (S-412 WMO Weather Product Specification, 2017).

Attribute Type: Enumeration

### 1) metres per second

IHO Definition: An SI derived unit of both speed (scalar) and velocity (vector quantity which specifies both magnitude and a specific direction), defined by distance in metres divided by time in seconds. (Wikipedia)

### 2) kilometres per hour

IHO Definition: A unit of speed, expressing the number of kilometres travelled in one hour. (Wikipedia).

### 3) miles per hour

IHO Definition: An imperial and United States customary unit of speed expressing the number of statute miles covered in one hour. (Wikipedia).

### 4) knots

IHO Definition: A nautical unit of speed. One knot is one nautical mile per hour. The name is derived from the knots in the log line. (IHO Dictionary, S-32).

Remarks:

No remarks.

### 27.236 station name

**IHO Definition:** **STATION NAME.** The name of the reference tide station with reference water level for tidal stream panel observations.

**Attribute Type:** Text

**Indication:** Name of tidal stream station (c...): String of characters.

**Format:** c...

**Example:** **Darwin** for the Darwin tide station.

**Remarks:**

- The attribute **station name** should contain no more than 50 characters.

### 27.237 station number

**IHO Definition:** **STATION NUMBER.** The identification number of the reference tide station with reference water level for tidal stream panel observations.

**Attribute Type:** Text

**Indication:** The value indicates the reference number of a tide station as listed in national Tide Tables.

**Format:** c...

**Example:** **63230** for the reference number of Darwin tide station.

**Remarks:**

- The attribute **station number** should contain no more than 15 characters.

### 27.238 status (STATUS)

**IHO Definition:** **STATUS.** The condition of an object at a given instant in time.

**Attribute Type:** Enumeration

1) **permanent**

**IHO Definition:** Intended to last or function indefinitely. (The Concise Oxford Dictionary, 7<sup>th</sup> Edition).

2) **occasional**

**IHO Definition:** Acting on special occasions; happening irregularly. (The Concise Oxford Dictionary, 7<sup>th</sup> Edition).

3) **recommended**

**IHO Definition:** Presented as worthy of confidence, acceptance, use, etc. (The Macquarie Dictionary, 1988).

4) **not in use**

**IHO Definition:** Use has ceased, but the facility still exists intact; disused. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

5) **periodic/intermittent**

**IHO Definition:** Recurring at intervals. (The Concise Oxford Dictionary, 7<sup>th</sup> Edition).

6) **reserved**

**IHO Definition:** Set apart for some specific use. (Adapted from The Concise Oxford Dictionary, 7<sup>th</sup> Edition).

7) **temporary**

IHO Definition: Meant to last only for a time. (The Concise Oxford Dictionary).

8) **private**

IHO Definition: Administered by an individual or corporation, rather than a State or a public body. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

9) **mandatory**

IHO Definition: Compulsory; enforced. (The Concise Oxford Dictionary, 7th Edition).

11) **extinguished**

IHO Definition: No longer lit. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.197, November 2000).

12) **illuminated**

IHO Definition: Lit by flood lights, strip lights, etc. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.198, November 2000).

13) **historic**

IHO Definition: Famous in history; of historical interest. (The Concise Oxford Dictionary, 7th Edition).

14) **public**

IHO Definition: Belonging to, available to, used or shared by, the community as a whole and not restricted to private use. (Adapted from The New Shorter Oxford English Dictionary, 1993).

15) **synchronized**

IHO Definition: Occur at a time, coincide in point of time, be contemporary or simultaneous. (The New Shorter Oxford English Dictionary, 1993).

16) **watched**

IHO Definition: Looked at or observed over a period of time especially so as to be aware of any movement or change. (adapted from The New Shorter Oxford English Dictionary, 1993).

17) **unwatched**

IHO Definition: Usually automatic in operation, without any permanently-stationed personnel to superintend it. (Adapted from IHO Dictionary – S-32).

18) **existence doubtful**

IHO Definition: A feature that has been reported but has not been definitely determined to exist. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.198, November 2000).

28) **buoyed**

IHO Definition: Marked by buoys. (Australian Hydrographic Office).

Remarks:

No remarks.

## 27.239 stream depth

IHO Definition: **STREAM DEPTH.** The depth below the sea surface to which the tidal stream data refers relative to the sounding datum.

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 200

Range closure: Closed interval  $(\text{minimum} \leq \text{stream depth} \leq \text{maximum})$

Examples: **0** for surface tidal stream data  
**15** for tidal stream data collected at a depth of 15 metres

Remarks:  
 No remarks.

## 27.240 technique of vertical measurement (TECSOU)

IHO Definition: **TECHNIQUE OF VERTICAL MEASUREMENT.** Survey method used to obtain depth information.

Attribute Type: Enumeration

### 1) **found by echo sounder**

IHO Definition: The depth was measured by using an instrument that determines depth of water by measuring the time interval between emission of a sonic or ultrasonic signal and return of its echo from the bottom. (Adapted from IHO Dictionary – S-32).

### 2) **found by side scan sonar**

IHO Definition: The depth was computed from a record produced by active sonar in which fixed acoustic beams are directed into the water perpendicularly to the direction of travel to scan the seabed and generate a record of the seabed configuration. (Adapted from IHO Dictionary – S-32).

### 3) **found by multi beam**

IHO Definition: The depth was measured by using a wide swath echo sounder that uses multiple beams to measure depths directly below and transverse to the ship's track. (Adapted from IHO Dictionary – S-32).

### 4) **found by diver**

IHO Definition: The depth was determined by a person skilled in the practice of diving. (Adapted from IHO Dictionary – S-32).

### 5) **found by lead line**

IHO Definition: The depth was measured by using a line, graduated with attached marks and fastened to a sounding lead. (Adapted from IHO Dictionary – S-32).

### 6) **swept by wire-drag**

IHO Definition: The given area was determined to be free from navigational dangers to a certain depth by towing a buoyed wire at the desired depth by two launches, or a least depth was identified using the same technique. (Hydrographic Dictionary, Part I Volume I, English)

### 8) **swept by vertical acoustic system**

IHO Definition: The given area has been swept using a system comprised of multiple echo sounder transducers attached to booms deployed from the survey vessel. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.207, November 2000).

### 9) **found by electromagnetic sensor**

IHO Definition: The depth was determined by using an instrument that compares electromagnetic signals. (Adapted from IHO Dictionary – S-32).

### 10) **photogrammetry**

IHO Definition: The science or art of obtaining reliable measurements from photographs. (IHO Dictionary – S-32).

### 11) **satellite imagery**

IHO Definition: The depth was determined by using instruments placed aboard an artificial satellite. (Adapted from IHO Dictionary – S-32).

### 12) **found by levelling**

IHO Definition: The depth was determined by using levelling techniques to find the elevation of the point relative to a datum. (Adapted from IHO Dictionary – S-32).

13) **swept by side scan sonar**

IHO Definition: The given area was determined to be free from navigational dangers to a certain depth by towing a side scan sonar. (Adapted from IHO Dictionary – S-32).

15) **found by LIDAR**

IHO Definition: The depth was measured by using an instrument that measures distance by emitting timed pulses of laser light and measuring the time between emission and reception of the reflected pulses. (Adapted from IHO Dictionary – S-32).

16) **synthetic Aperture Radar**

IHO Definition: A radar with a synthetic aperture antenna which is composed of a large number of elementary transducing elements. The signals are electronically combined into a resulting signal equivalent to that of a single antenna of a given aperture in a given direction. (IHO Dictionary – S-32).

17) **hyperspectral Imagery**

IHO Definition: Term used to describe the imagery derived from subdividing the electromagnetic spectrum into very narrow bandwidths. These narrow bandwidths may be combined with or subtracted from each other in various ways to form images useful in precise terrain or target analysis.

18) **mechanically swept**

IHO Definition: The given area was determined to be free from navigational dangers to a certain depth by towing a line or object below the surface at the desired depth; or least depth(s) and position(s) within an area was identified using the same technique. (Adapted from IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.241 telecommunication identifier

IHO Definition: **TELECOMMUNICATION IDENTIFIER.** An identifier, such as words, numbers, letters, symbols, or any combination of those used to establish a contact to a particular person, organisation or service.

Attribute Type: Text

Indication:

Format: c...

Example: +61 2 4223 6500; pilsener@beer.com

Remarks:

- The telecommunication identifier should include the international and any applicable regional codes.
- The attribute **telecommunication identifier** should contain no more than 50 characters.

## 27.242 telecommunication service

IHO Definition: **TELECOMMUNICATION SERVICE.** Classification of methods of communication over a distance by electrical, electronic, or electromagnetic means.

Attribute Type: Enumeration

1) **voice**

IHO Definition: The transfer or exchange of information by using sounds that are being made by mouth and throat when speaking.

2) **facsimile**

IHO Definition: A system of transmitting and reproducing graphic matter (as printing or still pictures) by means of signals sent over telephone lines. (Merriam-Webster Dictionary – 2014).

3) **SMS**

IHO Definition: Short Message Service is a form of text messaging communication on phones and mobile phones.

4) **data**

IHO Definition: A representation of facts, concepts or instructions in a formalised manner suitable for communication, interpretation or processing. (IHO Dictionary – S-32).

5) **streamed data**

IHO Definition: Data that is constantly received by and presented to an end-user while being delivered by a provider.

6) **telex**

IHO Definition: A system of communication in which messages are sent over long distances by using a telephone system and are printed by using a special machine (called a teletypewriter). (Merriam-Webster Dictionary – 2014).

7) **telegraph**

IHO Definition: An apparatus, system or process for communication at a distance by electric transmission over wire.

8) **email**

IHO Definition: Messages and other data exchanged between individuals using computers in a network. (Merriam-Webster Dictionary – 2014).

Remarks:

No remarks.

## 27.243 text (INFORM, NINFOM)

IHO Definition: **TEXT**. A non-formatted digital text string.

Attribute Type: Text

Indication:

Remarks:

- This attribute should be used, for example, to hold the information that is shown on paper charts by short cautionary or explanatory notes. Therefore, text populated in **text** must not exceed 300 characters.
- Text may be in English, or in a national language defined by the attribute **language** (see clause 27.164).
- No formatting of text is possible within **text**. If formatted text, or text strings exceeding 300 characters, is required, then the sub-attribute **file reference** must be used (see clause 27.143).

## 27.244 text offset bearing

IHO Definition: **TEXT OFFSET BEARING**. The angular distance measured from true north that text associated with a feature is positioned from the feature in an end-user system.

Attribute Type: Integer

Unit: Degree (°)

Minimum range: 0

Maximum range: 360

Range closure: Right half-open interval

(*minimum* ≤ **text offset bearing** < *maximum*)

Example: **246** for a text offset bearing of 246 degrees

Remarks:

- An orientation quoted as 360° must be encoded as 0.
- The attribute **text offset bearing** only defines the bearing to the anchor point of the text in the end-user system. It does not impact on the rotation of the text itself (that is, text is always displayed horizontally on the screen).

## 27.245 text offset distance

IHO Definition: **TEXT OFFSET DISTANCE.** The distance that text associated with a feature is positioned from the feature in an end-user system.

Attribute Type: Integer

Unit: Defined in relation to the desired distance in the Inland ECDIS or ECS display from the associated feature at the optimum display scale of the IENC data in millimetres (mm).

Minimum range: 0

Maximum range: 50

Range closure: Left half-open interval (*minimum* < **text offset distance** ≤ *maximum*)

Example: **15** for a text offset of 15 mm

Remarks:

None.

## 27.246 text rotation

IHO Definition: **TEXT ROTATION.** A statement that expresses if text associated with a feature is to be rotated in the ECDIS display or not.

Attribute Type: Boolean

Indication: A True value is an indication that the text is to be rotated in accordance with a defined parameter.

Remarks:

- The rotation of the text in the Inland ECDIS or ECS is done in accordance with the value populated for the attribute **text offset bearing**.

## 27.247 text type

IHO Definition: **TEXT TYPE.** The attribute from which a text string is derived.

Attribute Type: Enumeration

**name**

IHO Definition: See clause 27.188.

**feature characteristic**

IHO Definition: A distinguishing trait, quality, or property of a feature class. (Adapted from Merriam-Webster Dictionary – 2024).

Remarks:

- For **text type** = 1 (name), the text display preference is the name of the feature (see clause 27.188).

- For **text type** = 2 (feature characteristic), the text display preference is the textual feature characteristics for which the corresponding S-401 portrayal rule implements a standardized textual string based on the attribution for the binding feature. If the portrayal rule implements more than one textual string for a feature based on multiple attributes (for example the vertical and horizontal clearances for a bridge pan), the text labels will all be listed, one after the other. (for example the construction of a light characteristic).

## 27.248 time of day end

**IHO Definition:** **TIME OF DAY END.** The time corresponding to the end of an active period.

**Attribute Type:** Time

**Indication:** The “time of day end” must be encoded using 2 digits for the hour (hh), 2 digits for the minutes (mm) and 2 digits for the seconds (ss). Additional characters are added dependant on the time zone indication (UTC or offset to UTC). This conforms to ISO 8601.

**Format:** hhmmssZ (**mandatory** for UTC time)  
 hhmmss+hhmm (**mandatory** for local time with UTC offset)  
 hhmmss (**mandatory** for local time without offset)

**Example:** **162000Z** for a period ending at 04:20 pm UTC.  
**162000+0100** for a period ending at 04:20 pm local time, 1 hour ahead of UTC.  
**162000** for a period ending at 04:20 pm local time, without specified offset to UTC.

**Remarks:**

- Local time expressed without a specified offset to UTC can be used where the same time of day applies locally, regardless of any local seasonal time adjustments (for example daylight saving (or Summer) time), but local time with UTC offset is preferred.

## 27.249 time of day start

**IHO Definition:** **TIME OF DAY START.** The time corresponding to the start of an active period.

**Attribute Type:** Time

**Indication:** The “time of day start” must be encoded using 2 digits for the hour (hh), 2 digits for the minutes (mm) and 2 digits for the seconds (ss). Additional characters are added dependant on the time zone indication (UTC or offset to UTC). This conforms to ISO 8601.

**Format:** hhmmssZ (**mandatory** for UTC time)  
 hhmmss+hhmm (**mandatory** for local time with UTC offset)  
 hhmmss (**mandatory** for local time without offset)

**Example:** **094500Z** for a period starting at 09:45 am UTC.  
**094500+0100** for a period starting at 09:45 am local time, 1 hour ahead of UTC.  
**094500** for a period starting at 09:45 am local time, without specified offset to UTC.

**Remarks:**

- Local time expressed without a specified offset to UTC can be used where the same time of day applies locally, regardless of any local seasonal time adjustments (for example daylight saving (or Summer) time), but local time with UTC offset is preferred.

## 27.250 time relative to tide

**IHO Definition:** **TIME RELATIVE TO TIDE.** The time difference relative to the reference tide.

**Attribute Type:** Real

**Unit:** Hour

**Precision:** 0.1 hour

Minimum range: -6

Maximum range: 6

Range closure: Closed interval ( $minimum \leq \textit{tide relative to tide} \leq maximum$ )

Example: **1.5** for 1.5 hours after the referenced tide  
**-1.5** for 1.5 hours before the referenced tide

Remarks:

- Positive values are time after the referenced tide, negative values are time before the referenced tide.

## 27.251 time schedule reference (schref)

IHO Definition: The string encodes the file name of an external file.

Attribute Type: Text

Remarks:

- No remarks.

## 27.252 topmark/daymark shape (TOPSHP)

IHO Definition: **TOPMARK/DAYMARK SHAPE.** The shape a topmark or daymark exhibits.

Attribute Type: Enumeration

### 1) **cone (point up)**

IHO Definition: Is where the vertex points up. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.222, November 2000).

### 2) **cone (point down)**

IHO Definition: Is where the vertex points down. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.222, November 2000).

### 3) **sphere**

IHO Definition: A curved surface all points of which are equidistant from a fixed point within, called the centre. (IHO Dictionary – S-32).

### 4) **2 spheres**

IHO Definition: Two spheres, one above the other. Two black spheres are commonly used as an International Association of Lighthouse Authorities - IALA topmark (isolated danger). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

### 5) **cylinder**

IHO Definition: A solid geometrical figure generated by straight lines fixed in direction and describing with one of point a closed curve, especially a circle (in which case the figure is circular cylinder, its ends being parallel circles). (The New Shorter Oxford English Dictionary, 1993, vol 2).

### 6) **board**

IHO Definition: Usually of rectangular shape, made from timber or metal and used to provide a contrast with the natural background of a daymark. The actual daymark is often painted on to this board. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

### 7) **x-shaped**

IHO Definition: Having a shape or a cross-section like the capital letter X. (The New Shorter Oxford English Dictionary, 1993, vol 2).

### 8) **upright cross**

IHO Definition: A cross with one vertical member and one horizontal member; that is, similar in shape to the character “+”. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

9) **cube (point up)**

IHO Definition: A cube standing on one of its vertexes. A cube is a solid contained by six equal squares; a regular hexahedron (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

10) **2 cones (point to point)**

IHO Definition: 2 cones, one above the other, with their vertexes together in the centre. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

11) **2 cones (base to base)**

IHO Definition: 2 cones, one above the other, with their bases together in the centre and their vertexes pointing up and down. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

12) **rhombus**

IHO Definition: A plane figure having four equal sides and equal opposite angles (two acute and two obtuse); an oblique equilateral parallelogram. (The New Shorter Oxford English Dictionary, 1993, vol 2).

13) **2 cones (points upward)**

IHO Definition: 2 cones, one above the other, with their vertexes pointing up. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

14) **2 cones (points downward)**

IHO Definition: 2 cones, one above the other, with their vertexes pointing down. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

15) **besom (point up)**

IHO Definition: A bundle of rods or twigs. A besom, point up is where the thicker (untied) end of the besom is at the bottom. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

16) **besom (point down)**

IHO Definition: A bundle of rods or twigs. A besom, point down is where the thinner (tied) end of the besom is at the bottom. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

17) **flag**

IHO Definition: A flag mounted on a short pole. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

18) **sphere over a rhombus**

IHO Definition: A sphere located above a rhombus. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

19) **square**

IHO Definition: A plane figure with four right angles and four equal straight sides (The New Shorter Oxford English Dictionary, 1993, vol 2).

20) **rectangle (horizontal)**

IHO Definition: A horizontal rectangle is where the two longer opposite sides are standing horizontally. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

21) **rectangle (vertical)**

IHO Definition: A vertical rectangle is where the two longer opposite sides are standing vertically. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

22) **trapezium (up)**

IHO Definition: A quadrilateral having one pair of opposite sides parallel, and which stands on its longer parallel side. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

**23) trapezium (down)**

IHO Definition: A quadrilateral having one pair of opposite sides parallel, and which stands on its shorter parallel side. (Adapted from The New Shorter Oxford English Dictionary, 1993, vol 2).

**24) triangle (point up)**

IHO Definition: A figure having three angles and three sides, and which has a vertex at the top. (Adapted from New Shorter Oxford English Dictionary, 1993, vol 2).

**25) triangle (point down)**

IHO Definition: A figure having three angles and three sides, and which has a side at the top. (Adapted from New Shorter Oxford English Dictionary, 1993, vol 2).

**26) circle**

IHO Definition: A perfectly round plane figure whose circumference is everywhere equidistant from its centre. (The New Shorter Oxford English Dictionary, 1993, vol 1).

**27) two upright crosses (one over the other)**

IHO Definition: Two upright crosses, generally vertically disposed one above the other. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**28) T-shape**

IHO Definition: Having a shape like the capital letter T. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**29) triangle pointing up over a circle**

IHO Definition: A triangle, vertex uppermost, located above a circle. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**30) upright cross over a circle**

IHO Definition: An upright cross located above a circle. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**31) rhombus over a circle**

IHO Definition: A rhombus located above a circle. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**32) circle over a triangle pointing up**

IHO Definition: A circle located over a triangle, vertex uppermost. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.224, November 2000).

**33) other shape (see shape information)**

IHO Definition: An uncommon and/or non-standardized shape as textually described using an associated attribute.

**34) tubular**

IHO Definition: Having the form of or consisting of a tube. (Merriam-Webster's Collegiate Dictionary).

**Remarks:**

- **Cone:** A solid figure generated by straight lines drawn from a fixed point (the vertex) to a circle in a plane not containing the vertex. (The New Shorter Oxford English Dictionary, 1993, vol 2).  
Cones are commonly used as International Association of Lighthouse Authorities - IALA topmarks (lateral). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.222, November 2000).
- Spheres are commonly used as International Association of Lighthouse Authorities - IALA topmarks (safe water). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).
- Cylinders are commonly used as International Association of Lighthouse Authorities - IALA topmarks (lateral). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).
- An x-shape as an International Association of Lighthouse Authorities – IALA topmark should be 3 dimensional in shape. It is made of at least three crossed bars. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

- A rectangle is a plane figure with four right angles and four straight sides, opposite sides being parallel and equal in length. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.223, November 2000).

### 27.253 traffic flow (TRAFIC)

IHO Definition: **TRAFFIC FLOW.** Direction of vessels passing a reference point.

Attribute Type: Enumeration

1) **inbound**

IHO Definition: Traffic flow in a general direction toward a port or similar destination. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.225, November 2000).

2) **outbound**

IHO Definition: Traffic flow in a general direction away from a port or similar point of origin. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.225, November 2000).

3) **one-way**

IHO Definition: Traffic flow in one general direction only. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.225, November 2000).

4) **two-way**

IHO Definition: Traffic flow in two generally opposite directions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.225, November 2000).

Remarks:

No remarks.

### 27.254 transshipping goods (trshgd)

IHO Definition: List of goods, which can be transshipped.

1) **Containers**

IHO Definition: Boxes for cargo transport with standardized dimensions.

2) **Bulk Goods**

IHO Definition: Unpacked bulk cargo in the same or a similar kind of nature (homogeneous).

3) **Oil**

IHO Definition: A thick, slippery liquid that will not dissolve in water, usually petroleum based in the context of storage tanks.

4) **Fuel**

IHO Definition: Liquid fuel, e.g. gasoline, diesel.

5) **Chemicals**

IHO Definition: Any substance obtained by or used in a chemical process.

6) **Liquid Goods**

IHO Definition: Fluids whose shape is usually determined by the container it fills.

7) **Explosive Goods**

IHO Definition: Goods that undergoes decomposition or combustion with great rapidity, evolving much heat and producing a large volume of gas.

8) **Fish**

IHO Definition: Vertebrate cold blooded animal with gills, living in water.

**9) Cars**

IHO Definition: Wheeled vehicles.

**10) General Cargo**

IHO Definition: General cargo.

**11) Large-Volume And Heavy Goods (Exceptional Transports)**

Goods that are exceptional transports on the road due to their large volume and/or their mass according to national legislation.

Remarks:

No remarks.

**27.255 type of AtoN (typatn)**

IHO Definition: The type of AtoN being referenced.

**1) Aid to Navigation**

IHO Definition: A visual, acoustical, or radio device, external to a ship, designed to assist in determining a safe course or a vessels position, or to warn of dangers and/or obstructions. Aids to navigation usually include buoys, beacons, fog signals, lights, radio beacons, leading marks, radio position fixing systems and GNSS which are chart-related and assist safe navigation.

**2) Physical AIS Aid to Navigation**

IHO Definition: An Automatic Identification System (AIS) message 21 transmitted from a physical Aid to Navigation, or transmitted from an AIS station for an Aid to Navigation which physically exists.

**3) Virtual AIS Aid to Navigation**

IHO Definition: An Automatic Identification System (AIS) message 21 transmitted from an AIS station to simulate on navigation systems an Aid to Navigation which does not physically exist.

Remarks:

No remarks.

**27.256 type of ship (shptyp)**

IHO Definition: Type of ship.

**1) General Cargo Vessel**

IHO Definition: A vessel which is designed for carrying general cargo, e.g. boxes, sacks.

**2) Container Vessel**

IHO Definition: A vessel which is designed for carrying containers.

**3) Tanker**

IHO Definition: A vessel which is designed for carrying liquid goods, for example oil or water.

**4) Sailing Vessel**

IHO Definition: A vessel that is powered by the wind; often having several masts.

**5) Fishing Vessel**

IHO Definition: A vessel that is used and equipped for the fishing of living aquatic resources.

**6) Special Purpose Vessel**

IHO Definition: A vessel that fulfills special purposes; for example hovercrafts, pilot **boats**.

7) **Man of War**

IHO Definition: Armed naval vessel.

8) **Submarine**

IHO Definition: A vessel that is capable of operating for an extended period of time underwater.

9) **High Speed Craft**

IHO Definition: A motorized vessel capable of reaching speeds over 40km/h with respect to water.

10) **Bulk Carrier**

IHO Definition: A vessel which is designed for carrying bulk goods, e.g. coal, ore or grain.

11) **Seaplane**

IHO Definition: Airplane designed to take off from and alight on water.

12) **Tugboat**

IHO Definition: A powerful small boat designed to pull or push larger ships or powerless barges.

13) **Passenger Vessel**

IHO Definition: A day trip or cabin vessel constructed and equipped to carry more than 12 passengers.

14) **Ferry**

IHO Definition: A vessel for transporting passengers, vehicles, and/or goods across a stretch of water, especially as a regular service.

15) **Boat**

IHO Definition: A small vessel.

Remarks:

•No remarks.

## 27.257 UN location code (unlocd)

IHO Definition: Used to encode the UN Location Code (<http://www.unece.org/cefact/locode/service/location.html>) or - in Europe - the Inland Ship Reporting Standard (ISRS) Code.

Attribute Type: text

Remarks:

The ISRS Code exists of:

- UN country code (2 digits),
  - UN Location code (3 digits, "XXX" if not available),
  - Fairway section number (5 numerical digits, to be determined by the national authority; a side branch should have an own section number, when there are special restrictions, e.g. bridges),
  - terminal code or passage point code (5 alphanumerical digits, "00000" if not available),
  - fairway section hectometre (5 numerical digits, hectometre at the centre of the area, "00000" if not available).
- The ISRS code should only be encoded for new features if it is intended to publish Application Specific Messages (ASM) via Inland AIS for those features.

## 27.258 underlying layer

IHO Definition: **UNDERLYING LAYER.** The position of the seabed type within the layers of the seabed.

Attribute Type: Integer

Indication: The value indicates the level of a material in a layered seabed, with the value 0 indicating the topmost level.

Minimum range: 0

Maximum range: 5

Range closure: Left half-open interval  $(\text{minimum} < \text{underlying layer} \leq \text{maximum})$

Example: 1 where the seabed type is the layer below the top of the seabed surface.

Remarks:

No remarks.

## 27.259 use of ship (useshp)

IHO Definition: Indication of the way the ship is used.

### 1) Liner Trade

IHO Definition: Ship is used to carry goods on a scheduled service.

### 2) Occasional Professional Shipping

IHO Definition: Ship is occasional used for professional shipping.

### 3) Leisure

IHO Definition: Ship is used for leisure activities.

Remarks:

No remarks.

## 27.260 value at other locally relevant water level (othwat)

IHO Definition: Value at waterway gauge in case of a specific water level, which is locally of importance or of interest for navigation.

Attribute Type: Real

Unit: metre (m)

Precision: 0.01 m

Minimum range: 0

Example: 1.5 for 1.5 m

Remarks:

No remarks.

## 27.261 value at relevant high water level (higwat)

IHO Definition: Value at waterway gauge in case of exact high water level (according to official regulations at the specific section of waterway).

Attribute Type: Real

Unit: metre (m)

Precision: 0.01 m  
Minimum range: 0  
Example: **1.5** for 1.5 m

Remarks:  
 No remarks.

### 27.262 value at relevant low water level (lowwat)

IHO Definition: Value at waterway gauge in case of exact low water level (according to official regulations at the specific section of waterway).

Attribute Type: Real

Unit: metre (m)

Precision: 0.01 m

Minimum range: 0

Example: **1.5** for 1.5 m

Remarks:  
 No remarks.

### 27.263 value at relevant mean water level (meawat)

IHO Definition: Value at waterway gauge in case of exact mean water level (according to official regulations at the specific section of waterway).

Attribute Type: Real

Unit: metre (m)

Precision: 0.01 m

Minimum range: 0

Example: **1.5** for 1.5 m

Remarks:  
 No remarks.

### 27.264 value of annual change in magnetic variation (VALACM)

IHO Definition: **VALUE OF ANNUAL CHANGE IN MAGNETIC VARIATION.** The annual change in magnetic variation values. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.226, November 2000).

Attribute Type: Real

Unit: minute ('), negative west

Precision: 0.1'

Minimum range: -1200

Maximum range: 1200

**Range closure:** Closed interval ( $minimum \leq \text{value of annual change in magnetic variation} \leq maximum$ )

**Example:** -7.1 for an annual change of 7·1' in a westerly direction

**Remarks:**

- A positive value; that is, unsigned, indicates a change in an easterly direction and a negative value indicates a change in a westerly direction.

## 27.265 value of depth contour (VALDCO)

**IHO Definition: VALUE OF DEPTH CONTOUR.** The depth of a sea bottom contour. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.227, November 2000).

**Attribute Type:** Real

**Unit:** metre (m)

**Precision:** 0·1m

**Minimum range:** -30

**Maximum range:** 12500

**Range closure:** Open interval ( $minimum < \text{value of depth contour} < maximum$ )

**Example:** 50 for a depth contour of 50 metres

**Remarks:**

- Drying contours are indicated by a negative value.

## 27.266 value of magnetic variation (VALMAG)

**IHO Definition: VALUE OF MAGNETIC VARIATION.** The angle between the magnetic and geographical meridians at any place, expressed in degrees east or west to indicate the direction of magnetic north from true north. (IHO Dictionary – S-32).

**Attribute Type:** Real

**Unit:** degree (°), negative west

**Precision:** 0.01°

**Minimum range:** -180

**Maximum range:** 180

**Range closure:** Left half-open interval ( $minimum < \text{value of magnetic variation} \leq maximum$ )

**Example:** 2.3 for a magnetic north oriented at 2.3 degrees (2°18') east from the geographic (true) north  
-1.5 for a magnetic north oriented at 2.3 degrees (1°30') west from the geographic (true) north

**Remarks:**

- A positive value; that is, unsigned, indicates a change in an easterly direction and a negative value indicates a change in a westerly direction.

## 27.267 value of maximum range (VALMXR)

**IHO Definition: VALUE OF MAXIMUM RANGE.** The extreme distance at which a feature can be seen or a signal detected. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.230, November 2000).

**Attribute Type:** Real

**Unit:** Nautical mile (M)

Precision: 0·1M

Minimum range: 0

Range closure: Left half-open ray (*minimum < value of maximum range*)

Example: 17 for maximum range of 17 nautical miles

Remarks:

- This attribute does not apply to lights, where the attribute “value of nominal range” should be used.

## 27.268 value of nominal range (VALNMR)

IHO Definition: **VALUE OF NOMINAL RANGE.** The luminous range of a light in a homogenous atmosphere in which the meteorological visibility is 10 sea miles. (IHO Dictionary – S-32).

Attribute Type: Real

Unit: Nautical mile (M)

Precision: 0·1M

Minimum range: 0

Maximum range: 30

Range closure: Left half-open interval (*minimum < value of nominal range ≤ maximum*)

Example: 14 for a nominal range of 14 nautical miles

Remarks:

None.

## 27.269 value of sounding (VALSOU)

IHO Definition: **VALUE OF SOUNDING.** The value of the measurement of a sounding relative to the chart datum. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.232, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC dataset metadata: metre (m)

Precision: 0·1m

Minimum range: -30

Maximum range: 12500

Range closure: Open interval (*minimum < value of sounding < maximum*)

Examples: 18.2 for a sounding of 18·2 metres  
-2.4 for a drying height of 2·4 metres

Remarks:

- A drying height is indicated by a negative value.

## 27.270 vertical clearance unlimited

IHO Definition: **VERTICAL CLEARANCE UNLIMITED.** A statement that expresses if the vertical clearance for a feature in the open position, such as a bridge span, is unlimited.

Attribute Type: Boolean

Indication: A True value is an indication that the vertical clearance for a feature in the open position is unlimited.

Remarks:

No remarks.

## 27.271 vertical clearance value (VERCLR) (VERCCL, VERCOP, VERCOSA)

**IHO Definition: VERTICAL CLEARANCE VALUE.** The vertical clearance measured from the horizontal plane towards the feature overhead. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.234, November 2000).

**Attribute Type:** Real

**Unit:** Defined as an attribute in the IENC Dataset Discovery Metadata: metre (m)

**Precision:** 0.1m

**Minimum range:** 0

**Range closure:** Left half-open ray (*minimum* < **vertical clearance value**)

**Example:** 7.6 for a vertical clearance of 7.6 metres

**Remarks:**

No remarks.

## 27.272 vertical datum (VERDAT)

**IHO Definition: VERTICAL DATUM.** The reference level used for expressing the vertical measurements of points on the earth's surface. Also called datum level, reference plane, levelling datum, datum for sounding reduction, datum for heights. (Adapted from IHO Dictionary, S-32).

**Attribute Type:** Enumeration

### 1) mean low water springs

**IHO Definition:** The average height of the low waters of spring tides. This level is used as a tidal datum in some areas. (IHO Dictionary – S-32).

### 2) mean lower low water springs

**IHO Definition:** The average height of lower low water springs at a place. (IHO Dictionary – S-32).

### 3) mean sea level

**IHO Definition:** The average height of the surface of the sea at a tide station for all stages of the tide over a 19-year period, usually determined from hourly height readings measured from a fixed predetermined reference level. (IHO Dictionary – S-32).

### 4) lowest low water

**IHO Definition:** An arbitrary level conforming to the lowest tide observed at a place, or somewhat lower. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.239, November 2000).

### 5) mean low water

**IHO Definition:** The average height of all low waters at a place over a 19-year period. (IHO Dictionary – S-32).

### 6) lowest low water springs

**IHO Definition:** An arbitrary level conforming to the lowest water level observed at a place at spring tides during a period of time shorter than 19 years. (Australian Hydrographic Office).

### 7) approximate mean low water springs

**IHO Definition:** An arbitrary level, usually within 0.3m from that of mean low water springs (MLWS). (Australian Hydrographic Office).

### 8) indian spring low water

IHO Definition: An arbitrary tidal datum approximating the level of the mean of the lower low water at spring tides. It was first used in waters surrounding India. (IHO Dictionary – S-32).

A tidal datum approximating the lowest water level observed at a place, originated by G.H. Darwin for the tides of India at a level below MSL being equal to the sum of amplitudes of the harmonic constituents M2, S2, K1 and O1; usually below that of the lower low water at spring tides. Also called Indian tide plane. (Australian Hydrographic Office).

9) **low water springs**

IHO Definition: An arbitrary level, approximating that of mean low water springs (MLWS). (Australian Hydrographic Office).

10) **approximate lowest astronomical tide**

IHO Definition: An arbitrary level, usually within 0.3m from that of lowest astronomical tide (LAT). (Australian Hydrographic Office).

11) **nearly lowest low water**

IHO Definition: An arbitrary level approximating the lowest water level observed at a place, usually equivalent to the Indian spring low water (ISLW). (Australian Hydrographic Office).

12) **mean lower low water**

IHO Definition: The average height of the lower low waters at a place over a 19-year period. (IHO Dictionary – S-32).

13) **low water**

IHO Definition: The lowest level reached at a place by the water surface in one oscillation. (IHO Dictionary – S-32).

14) **approximate mean low water**

IHO Definition: An arbitrary level, usually within 0.3m from that of mean low water (MLW). (Australian Hydrographic Office).

15) **approximate mean lower low water**

IHO Definition: An arbitrary level, usually within 0.3m from that of mean lower low water (MLLW). (Australian Hydrographic Office).

16) **mean high water**

IHO Definition: The average height of all high waters at a place over a 19-year period. (IHO Dictionary, S-32).

17) **mean high water springs**

IHO Definition: The average height of the high waters of spring tides. (IHO Dictionary, S-32).

18) **high water**

IHO Definition: The highest level reached at a place by the water surface in one oscillation. (IHO Dictionary, S-32).

19) **approximate mean sea level**

IHO Definition: An arbitrary level, usually within 0.3m from that of mean sea level (MSL). (Australian Hydrographic Office).

20) **high water springs**

IHO Definition: An arbitrary level, approximating that of mean high water springs (MHWS). (Australian Hydrographic Office).

21) **mean higher high water**

IHO Definition: The average height of higher high waters at a place over a 19-year period. (IHO Dictionary, S-32).

22) **equinoctial spring low water**

IHO Definition: The level of low water springs near the time of an equinox. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**23) lowest astronomical tide**

IHO Definition: The lowest tide level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions. (IHO Dictionary – S-32).

**24) local datum**

IHO Definition: An arbitrary datum defined by a local harbour authority, from which levels and tidal heights are measured by this authority. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**25) international Great Lakes Datum 1985**

IHO Definition: A vertical reference system with its zero based on the mean water level at Rimouski/Pointe-au-Père, Quebec, over the period 1970 to 1988. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**26) mean water level**

IHO Definition: The average of all hourly water levels over the available period of record. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**27) lower low water large tide**

IHO Definition: The average of the lowest low waters, one from each of 19 years of observations. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**28) higher high water large tide**

IHO Definition: The average of the highest high waters, one from each of 19 years of observations. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**29) nearly highest high water**

IHO Definition: An arbitrary level approximating the highest water level observed at a place, usually equivalent to the high water springs. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.240, November 2000).

**30) highest astronomical tide**

IHO Definition: The highest tidal level which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions. (IHO Dictionary, S-32).

**31) local low water reference level**

IHO Definition: Low water reference level of the local area.

**32) local high water reference level**

IHO Definition: High water reference level of the local area.

**33) local mean water reference level**

IHO Definition: Mean water reference level of the local area.

**34) equivalent height of water (German GIW)**

IHO Definition: A low water level which is the result of a defined low water discharge - called "equivalent discharge".

**35) highest shipping height of water (German HSW)**

IHO Definition: Upper limit of water levels where navigation is allowed.

**36) reference low water level according to Danube Commission**

IHO Definition: The water level at a discharge, which is exceeded 94 % of the year within a period of 30 years.

**37) highest shipping height of water according to Danube Commission**

IHO Definition: The water level at a discharge, which is exceeded 1% of the year within a period of 30 years.

**38) Dutch river low water reference level (OLR)**

IHO Definition: The water level at a discharge, which is exceeded 95% of the year within a period of 20 years.

**39) Russian project water level**

IHO Definition: Conditional low water level with established probability.

**40) Russian normal backwater level**

IHO Definition: Highest water level derived from the upper backwater stream in watercourse or reservoir under the normal operational conditions.

**41) Ohio river datum**

IHO Definition: The Ohio River datum.

**43) Dutch high water reference level**

IHO Definition: Dutch High Water Reference Level.

**44) baltic sea chart datum 2000**

IHO Definition: The datum refers to each Baltic country's realization of the European Vertical Reference System (EVRS) with land-uplift epoch 2000, which is connected to the Normaal Amsterdams Peil (NAP). (Baltic Sea Hydrographic Commission).

**45) Dutch estuary low water reference level (OLW)**

IHO Definition: Dutch Estuary Low Water Reference Level (OLW)

Remarks:

- This attribute is used to specify the datum to which both heights (vertical datum) and soundings (sounding datum) are referred.
- When the vertical datum is unknown, such as water areas above locks, the value "local datum" should be used, and further details may be encoded using the complex attribute **information** (see clause 2.4.6).
- The  $\pm 0.3\text{m}$  approximation quoted in the "approximate" levels is arbitrary and follows the British example of their definition for "approximate LAT".

**27.273 vertical length (VERLEN)**

IHO Definition: **VERTICAL LENGTH.** The total vertical length of a feature. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.242, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC Dataset Discovery Metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 900

Range closure: Left half-open interval  $(\text{minimum} < \textbf{vertical length} \leq \text{maximum})$

Minimum value: 0

Example: **24.5** for a vertical length of 24.5 metres

Remarks:

- For floating features: The vertical distance from the surface of water to the highest point of that feature.
- For fixed features: The vertical distance from seabed or ground to the highest point of that feature.
- For features on top of other features: the vertical distance from the lowest to the highest point of that feature.
- Vertical length measurements do not require a datum.

**27.274 vertical river datum reference level value (vcrval)**

IHO Definition: Local value of the vertical clearance reference level.

Attribute Type: Real

Unit: metre (m)

Precision: 0.1m

Minimum range: 0

Maximum range: 3000

Minimum value: 0

Example: **4.5** for a reference level value of 4.5 metres

Remarks:

No remarks.

**27.275 vessel class**

IHO Definition: **VESSEL CLASS.** The classification of a vessel, normally as defined by length or gross tonnage.

Indication: The string encodes the classification of a vessel, normally by length or gross tonnage.

Attribute Type: Text

Remarks:

- The attribute **vessel class** should contain no more than 50 characters.

**27.276 visitors mooring (CATSCF)**

IHO Definition: **VISITORS MOORING.** A mooring set aside for the use of visiting vessels. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.92, November 2000).

Attribute Type: Boolean

Indication: A True value is an indication that a mooring is designated as a visitors mooring.

Remarks:

No remarks.

**27.277 visual prominence (CONVIS)**

IHO Definition: **VISUAL PROMINENCE.** The extent to which a feature, either natural or artificial, is visible from seaward. (Adapted from IHO Dictionary – S-32).

Attribute Type: Enumeration

1) **visually conspicuous**

IHO Definition: Term applied to an object either natural or artificial which is distinctly and notably visible from seaward. (IHO Dictionary – S-32).

2) **not visually conspicuous**

IHO Definition: An object that may be visible from seaward, but cannot be used as a fixing mark and is not conspicuous. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.120, November 2000).

3) **prominent**

IHO Definition: Objects which are easily identifiable, but do not justify being classed as conspicuous. (IHO Dictionary – S-32).

Remarks:

No remarks.

## 27.278 water displacement unit (lg\_wdu)

IHO Definition: Units of measure for water displacement.

### 1) Other

IHO Definition: Being the one or ones distinct from that or those first mentioned or implied.

### 2) Cubic Metres

IHO Definition: A unit of volume equal to a cube one metre long on each side.

### 3) Tonnes

IHO Definition: Commonly referred to as the metric ton in Canada, the United Kingdom and the United States, is a non-SI metric unit of mass equal to 1,000 kilograms or one megagram (symbol: Mg). It is equivalent to approximately 2,204.6 pounds, 1.102 short tons (US) or 0.984 long tons (UK). Although not part of the SI, the tonne is accepted for use with SI units and prefixes by the International Committee for Weights and Measures.

Remarks:

- this attribute provides the unit for the value encoded in the attribute **maximal permitted water displacement (lg\_wdp)**, see 27.175.

## 27.279 water level effect (WATLEV)

IHO Definition: **WATER LEVEL EFFECT.** The effect of the surrounding water on an object. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.243 (Remarks), November 2000).

Attribute Type: Enumeration

### 1) partly submerged at high water

IHO Definition: Partially covered and partially dry at high water. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.243, November 2000).

### 2) always dry

IHO Definition: Not covered at high water under average meteorological conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.243, November 2000).

### 3) always under water/submerged

IHO Definition: Remains covered by water at all times under average meteorological conditions. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.243, November 2000).

### 4) covers and uncovers

IHO Definition: Expression intended to indicate an area of a reef or other projection from the bottom of a body of water which periodically extends above and is submerged below the surface. Also referred to as dries or uncovers. (IHO Dictionary – S-32).

### 5) awash

IHO Definition: Flush with, or washed by the waves at low water under average meteorological conditions. (Adapted from IHO Dictionary – S-32).

### 6) subject to inundation or flooding

IHO Definition: An area periodically covered by flood water, excluding tidal waters. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

7) **floating**

IHO Definition: Resting or moving on the surface of a liquid without sinking. (Concise Oxford Dictionary).

8) **above mean water level**

IHO Definition: Above a water level called "Mean Water" which is the arithmetic mean value of all water levels within a certain period of time.

9) **below mean water level**

IHO Definition: Below a water level called "mean water", which is the arithmetic mean value of all water levels within a certain period of time.

Remarks:

- The attribute "water level effect" encodes the effect of the surrounding water on a feature.

## 27.280 waterway distance (wtwdis)

IHO Definition: **WATERWAY DISTANCE.** The length of the space between two points along a waterway. (Adapted from Oxford English Dictionary).

Attribute Type: Real

Unit: Defined by the sub-attribute **distance unit of measurement** (see clause 27.133).

Precision: 0-1

Minimum range: 0

Range closure: Left half-open ray *(minimum < **waterway distance**)*

Example: **2.5** for a waterway distance value of 2.5 nautical miles (where **distance unit of measurement** is populated as 5 (nautical mile)).

Remarks:

No remarks.

## 27.281 wave length value

IHO Definition: **WAVE LENGTH VALUE.** The distance between two successive peaks (or other points of identical phase) on an electromagnetic wave. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.172, November 2000).

Attribute Type: Real

Indication:

Unit: Metre (m)

Precision: 0.01m

Minimum range: 0

Range closure: Left half-open ray *(minimum < **wave length value**)*

Example: **0.03** for a radar transponder beacon in the wave length "3cm (X) – Band".

Remarks:

- Radar transponder beacons generally work on the 3cm (X) – Band or the 10cm (S) – Band wave lengths. Nevertheless, wave lengths outside the marine band are used.

## 28 Meta Feature and Spatial Attribute and Enumerate Descriptions

### 28.1 category of temporal variation

IHO Definition: **CATEGORY OF TEMPORAL VARIATION.** An assessment of the likelihood of change over time.

Attribute Type: Enumeration

1) **extreme event**

IHO Definition: Indication of the possible impact of a significant event (for example hurricane, earthquake, volcanic eruption, landslide, etc), which is considered likely to have changed the seafloor or landscape significantly.

2) **likely to change and significant shoaling expected**

IHO Definition: Continuous or frequent change (for example river siltation, sand waves, seasonal storms, icebergs, etc) that is likely to result in new significant shoaling.

3) **likely to change but significant shoaling not expected**

IHO Definition: Continuous or frequent change (for example sand wave shift, seasonal storms, icebergs, etc) that is not likely to result in new significant shoaling.

4) **likely to change**

IHO Definition: Continuous or frequent change to non-bathymetric features (for example river siltation, glacier creep/recession, sand dunes, buoys, marine farms, etc).

5) **unlikely to change**

IHO Definition: Significant change to the seafloor is not expected.

6) **unassessed**

IHO Definition: Not having been assessed.

Remarks:

No remarks.

### 28.2 data assessment

IHO Definition: **DATA ASSESSMENT.** The categorization of the assessment level of bathymetric data for an area.

Attribute Type: Enumeration

1) **assessed**

IHO Definition: The quality of the bathymetric data has been assessed.

2) **assessed (Oceanic)**

IHO Definition: The quality of oceanic bathymetric data (depths deeper than 200 metres) has been assessed, however details are not required.

3) **unassessed**

IHO Definition: Not having been assessed.

Remarks:

No remarks.

### 28.3 drawing index

IHO Definition: **DRAWING INDEX**. A numeric value used to indicate that datasets are intended to form a seamless presentation.

Attribute Type: Integer

Indication: Datasets that share a common value are intended to form a seamless presentation.

Unit: None

Minimum range: 1

Range closure: Left closed ray ( $minimum \leq \text{drawing index}$ )

Example: 1 for a datasets intended to be viewed seamlessly with other datasets having drawing index value set to 1.

Remarks:

- The attribute **drawing index** is required where the datasets intended to form a seamless presentation do not share a common minimum display scale. Also required if the dataset may need to form a seamless presentation with one or more S-57 datasets, in which case the value should correspond to the usage band of the adjoining or overlapping S-57 dataset(s).

### 28.4 full seafloor coverage achieved

IHO Definition: **FULL SEAFLOOR COVERAGE ACHIEVED**. Expression stating if full seafloor coverage has been achieved in the area covered by hydrographic surveys.

Attribute Type: Boolean

Indication: A True value is an indication that full seafloor coverage for an area covered by hydrographic survey(s) has been achieved.

Remarks:

- **full seafloor coverage achieved** applies to both the spatial completeness of feature detection and to the spatial completeness of the measurement of the regular seafloor. The former is further specified by the complex attribute **features detected**, the latter by the attributes **depth range maximum value** and **depth range minimum value**.

### 28.5 horizontal distance uncertainty (HORACC)

IHO Definition: **HORIZONTAL DISTANCE UNCERTAINTY**. The best estimate of the horizontal accuracy of horizontal clearances and distances. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.136, November 2000).

Attribute Type: Real

Unit: Defined as an attribute in the IENC Dataset Discovery Metadata: metre (m)

Precision: 0.1m

Minimum range: 0

Range closure: Left closed ray ( $minimum \leq \text{horizontal distance uncertainty}$ )

Example: 0.5 for an error of 0.5 metres.

Remarks:

- The expected input is the radius of the two-dimensional error.
- The error is assumed to be positive and negative. The plus/minus character must not be encoded.

## 28.6 least depth of detected features measured

**IHO Definition:** **LEAST DEPTH OF DETECTED FEATURES MEASURED.** Expression stating if the least depth of detected features in an area was measured.

**Attribute Type:** Boolean

**Indication:** A True value is an indication that the characteristics of a hydrographic survey are such that the least depth of significant seafloor features can be determined.

**Remarks:**

- A feature in this context is any object, whether manmade or not, projecting above the seafloor, which may be a danger for surface navigation (reference: IHO publication S-44).
- **least depth of detected features measured** does not describe the least depth of features that were actually detected during a hydrographic survey, but the ability of the survey to detect the least depth of features with a maximum uncertainty as defined in IHO publication S-44.

## 28.7 line spacing maximum

**IHO Definition:** **LINE SPACING MAXIMUM.** The maximum distance between hydrographic survey lines.

**Attribute Type:** Integer

**Unit:** metre

**Minimum range:** 0

**Range closure:** Left half-open ray (*minimum* < **line spacing maximum**)

**Example:** **250** for a maximum distance between sounding lines of 250 metres.

**Remarks:**

No remarks.

## 28.8 line spacing minimum

**IHO Definition:** **LINE SPACING MINIMUM.** The minimum distance between hydrographic survey lines.

**Attribute Type:** Integer

**Unit:** metre

**Minimum range:** 0

**Range closure:** Left half-open ray (*minimum* < **line spacing minimum**)

**Example:** **50** for a minimum distance between sounding lines of 50 metres.

**Remarks:**

No remarks.

## 28.9 maximum display scale (CSCALE)

**IHO Definition:** **MAXIMUM DISPLAY SCALE.** The value considered by the Data Producer to be the maximum (largest) scale at which the data is to be displayed before it can be considered to be “grossly overscaled”.

**Attribute Type:** Integer

**Indication:** The modulus of the scale is indicated, that is 1:22 000 is encoded as 22000.

**Unit:** none

**Minimum range:** 1

Maximum range: 10000000

Range closure: Closed interval ( $minimum \leq \textbf{maximum display scale} \leq maximum$ )

Example: **12000** for a maximum display scale of scale of 1:12000

Remarks:

- **Maximum display scale** provides a reference for the user selected viewing scale in the Inland ECDIS or ECS at which the overscale warning will be displayed if there is no larger optimum display scale IENC dataset available.
- This attribute is only used in conjunction with the Meta feature **Data Coverage** which is used to define polygons of equal largest intended viewing scale. See clause 3.5.1-, Table 3-2, for the list of mandatory **maximum display scale** values.

## 28.10 measurement distance maximum (SDISMX)

IHO Definition: **MEASUREMENT DISTANCE MAXIMUM.** The maximum spacing of the principal measurement lines of a hydrographic survey.

Attribute Type: Integer

Unit: metre

Precision: 1m

Minimum range: 0

Range closure: Left half-open ray ( $minimum < \textbf{measurement distance maximum}$ )

Example: **30** for a maximum distance between sounding along a sounding line of 30 metres.

Remarks:

- Note that, in spite of the representation of a depth measurement with a single discrete point position, it actually represents an area with a certain footprint on the seafloor.

## 28.11 measurement distance minimum (SDISMN)

IHO Definition: **MEASUREMENT DISTANCE MINIMUM.** The minimum spacing of the principal measurement lines of a hydrographic survey.

Attribute Type: Integer

Unit: metre

Precision: 1m

Minimum range: 0

Range closure: Left half-open ray ( $minimum < \textbf{measurement distance minimum}$ )

Example: **5.75** for a minimum distance between sounding along a sounding line of 5.75 metres.

Remarks:

- Note that, in spite of the representation of a depth measurement with a single discrete point position, it actually represents an area with a certain footprint on the seafloor.

## 28.12 minimum display scale

IHO Definition: **MINIMUM DISPLAY SCALE.** The smallest intended viewing scale for the data.

Attribute Type: Integer

Indication: The modulus of the scale is indicated, that is 1:700 000 is encoded as 700000.

Unit: none

Minimum range: 2000

Maximum range: 10000000

Range closure: Closed interval  $(\text{minimum} \leq \text{minimum display scale} \leq \text{maximum})$

Example: **700000** for a minimum display scale of scale of 1:700000

Remarks:

- **Minimum display scale** is intended to be used in a series of IENC cells covering a geographic area to determine the dataset loading strategy as the user selected viewing scale becomes larger.
- This attribute is only used in conjunction with the Meta feature **Data Coverage** which is used to define polygons of equal smallest intended viewing scale. **minimum display scale** should therefore not be confused with the attribute **scale minimum**. See clause 3.5.1, Table 3-2, for the list of mandatory **minimum display scale** values.

### 28.13 optimum display scale (CSCALE)

IHO Definition: **OPTIMUM DISPLAY SCALE**. The largest intended viewing scale for the data.

Attribute Type: Integer

Indication: The modulus of the scale is indicated, that is 1:22 000 is encoded as 22000.

Unit: none

Minimum range: 1000

Maximum range: 10000000

Range closure: Closed interval  $(\text{minimum} \leq \text{optimum display scale} \leq \text{maximum})$

Example: **12000** for an optimum display scale of scale of 1:12000

Remarks:

**optimum display scale** provides a reference for the user selected viewing scale in the ECDIS at which the overscale indication will be displayed if there is no larger optimum display scale ENC dataset available, as well as the ECDIS viewing scale when the cell is loaded.

This attribute is only used in conjunction with the Meta feature **Data Coverage** which is used to define polygons of equal largest intended viewing scale. See clause 3.5.1, Table 3-2, for the list of mandatory **optimum display scale** values.

### 28.14 orientation uncertainty

IHO Definition: **ORIENTATION UNCERTAINTY**. The best estimate of the accuracy of a bearing.

Attribute Type: Real

Unit: Degree (°)

Precision: 0.001°

Minimum range: 0

Maximum range: 360

Range closure: Right half-open interval  $(\text{minimum} \leq \text{orientation uncertainty} < \text{maximum})$

Example: **0.005** for an error of 0.005 degrees

Remarks:

No remarks.

## 28.15 quality of horizontal measurement (QUAPOS)

**IHO Definition:** **QUALITY OF HORIZONTAL MEASUREMENT.** The degree of reliability attributed to a position.

**Attribute Type:** Enumeration

### 4) **approximate**

**IHO Definition:** A position that is considered to be less than third-order accuracy, but is generally considered to be within 30.5 metres of its correct geographic location. Also may apply to a feature whose position does not remain fixed. (Adapted from IHO Dictionary – S-32, and IHO Specifications, S-4 – B-424.1).

### 5) **position doubtful**

**IHO Definition:** Of uncertain position. The expression is used principally on charts to indicate that a wreck, shoal, etc., has been reported in various positions and not definitely determined in any.

**Remarks:**

No remarks

## 28.16 quality of vertical measurement (QUASOU)

**IHO Definition:** **QUALITY OF VERTICAL MEASUREMENT.** The reliability of the value of a sounding.

**Attribute Type:** Enumeration

### 1) **depth known**

**IHO Definition:** The depth from the chart datum to the seabed (or to the top of a drying feature) is known. (Adapted from Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

### 2) **depth or least depth unknown**

**IHO Definition:** The depth from chart datum to the seabed, or the shoalest depth of the feature is unknown. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000, as amended).

### 3) **doubtful sounding**

**IHO Definition:** A depth that may be less than indicated. (Adapted from IHO Dictionary – S-32).

### 4) **unreliable sounding**

**IHO Definition:** A depth that is considered to be an unreliable value. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000).

### 6) **least depth known**

**IHO Definition:** The shoalest depth over a feature is of known value. (Adapted from IHO Dictionary – S-32).

### 7) **least depth unknown, safe clearance at value shown**

**IHO Definition:** The least depth over a feature is unknown, but there is considered to be safe clearance at this depth. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000).

### 8) **value reported (not surveyed)**

**IHO Definition:** Depth value obtained from a report, but not fully surveyed. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000).

### 9) **value reported (not confirmed)**

**IHO Definition:** Depth value obtained from a report, which it has not been possible to confirm. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000).

### 10) **maintained depth**

**IHO Definition:** The depth at which a channel is kept by human influence, usually by dredging. (IHO Dictionary – S-32).

### 11) **not regularly maintained**

IHO Definition: Depths may be altered by human influence, but will not be routinely maintained. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.169, November 2000).

Remarks:

- The attribute **quality of vertical measurement** indicates the reliability of the value of sounding.

## 28.17 scale value maximum (SCVAL1)

IHO Definition: **SCALE VALUE MAXIMUM.** The largest scale for the range of survey scale. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.182, November 2000).

Attribute Type: Integer

Indication: The modulus of the scale is indicated, that is 1:25 000 is encoded as 25000.

Unit: none

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **scale value maximum**)

Example: **25000** for a scale of 1:25000

Remarks:

No remarks.

## 28.18 scale value minimum (SCVAL2)

IHO Definition: **SCALE VALUE MINIMUM.** The smallest scale for the range of survey scale. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.183, November 2000).

Attribute Type: Integer

Indication: The modulus of the scale is indicated, that is 1:250 000 is encoded as 250000.

Unit: none

Minimum range: 0

Range closure: Left half-open ray (*minimum* < **scale value minimum**)

Example: **250000** for a scale of 1:250000

Remarks:

No remarks.

## 28.19 significant features detected

IHO Definition: **SIGNIFICANT FEATURES DETECTED.** A statement expressing if significant features have or have not been detected in the course of a survey.

Attribute Type: Boolean

Indication: A True value is an indication that the characteristics of a hydrographic survey are such that significant seafloor features could be detected.

Remarks:

- A feature in this context is any object, whether manmade or not, projecting above the seafloor, which may be a danger for surface navigation (reference: IHO publication S-44). **Significant features detected** does not describe if significant features were actually detected during a hydrographic survey, but whether the survey had the capacity to detect significant features.

## 28.20 size of features detected

**IHO Definition:** **SIZE OF FEATURES DETECTED.** The size of detected bathymetric features in an area.

**Attribute Type:** Real

**Unit:** cubic metre

**Precision:** 0.01 cubic metres

**Minimum range:** 0

**Range closure:** Left half-open ray (*minimum < size of features detected*)

**Example:** **32.5** for a survey capable of detecting significant seafloor features of a minimum size of 32.5 cubic metres.

**Remarks:**

- A feature in this context is any object, whether manmade or not, projecting above the seafloor, which may be a danger for surface navigation (reference: IHO publication S-44).
- **Size of features detected** does not describe the actual size of features detected during a hydrographic survey, but the size of the smallest feature that the survey was capable of detecting with a high probability.

## 28.21 source

**IHO Definition:** **SOURCE.** The publication, document, or reference work from which information comes or is acquired.

**Attribute Type:** Text

**Indication:** Source (c...): String of characters.

**Example:**

**Notice to Mariners 3245/24**

**Remarks:**

- The attribute **source** may be populated with the corresponding paper chart Notice to Mariners or Notices to Skippers numbers, although other references are permitted.
- The attribute **source** should contain no more than 150 characters.

## 28.22 survey authority (SURATH)

**IHO Definition:** **SURVEY AUTHORITY.** The authority which was responsible for the survey. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.200, November 2000).

**Attribute Type:** Text

**Indication:** Survey authority (c...): String of characters.

**Format:** c...

**Example:**

**Australian Hydrographic Office  
Port of Melbourne Authority**

**Remarks:**

- The attribute “survey authority” encodes the name of the source survey authority.
- The attribute **survey authority** should contain no more than 100 characters.

## 28.23 survey type (SURTYP)

IHO Definition: **SURVEY TYPE.** Classification of the different survey types.

Attribute Type: Enumeration

1) **reconnaissance/sketch survey**

IHO Definition: A survey made (due to lack of time or facilities) to a lower degree of accuracy and detail than the chosen scale would normally indicate. (IHO Dictionary – S-32).

2) **controlled survey**

IHO Definition: A thorough survey usually conducted with reference to guidelines. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.203, November 2000).

4) **examination survey**

IHO Definition: A survey principally aimed at the investigation of underwater obstructions and dangers. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.203, November 2000).

5) **passage survey**

IHO Definition: A survey where soundings are acquired by vessels on passage. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.203, November 2000).

6) **remotely sensed**

IHO Definition: A survey where features have been positioned and delimited using remote sensing techniques. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.203, November 2000).

7) **full coverage**

IHO Definition: A survey achieving 100% coverage using systematic, controlled techniques providing full seafloor coverage or full coverage to a defined depth and an investigation of all contacts.

8) **systematic survey**

IHO Definition: A controlled survey but full coverage may not have been achieved.

9) **non-systematic survey**

IHO Definition: A survey of lower quality than a full coverage and systematic survey. Such surveys may be further categorized as reconnaissance, sketch, track, passage, remotely sensed and spot-sounding surveys.

10) **inadequately surveyed**

IHO Definition: Not surveyed to modern standards; or due to its age, scale, or positional or vertical uncertainties is not suitable to the type of navigation expected in the area. (Adapted from IHO Data Quality Working Group (DQWG)).

11) **spot-sounding survey**

IHO Definition: A survey that uses a regular (for example grid) or irregular pattern of soundings obtained one at a time, and normally with very wide spacing.

12) **acoustically swept survey**

IHO Definition: A controlled, systematic survey to standard accuracy; using modern survey echo sounder with sonar sweep.

13) **mechanically swept survey**

IHO Definition: Swept areas where the clearance depth is accurately known but the actual seabed depth is not accurately known.

Remarks:

No remarks.

## 28.27 uncertainty variable factor

**IHO Definition: UNCERTAINTY VARIABLE FACTOR.** The factor to be applied to the variable component of an uncertainty equation so as to provide the best estimate of the variable horizontal or vertical accuracy component for positions, depths, heights, vertical distances and vertical clearances.

**Attribute Type:** Real

**Indication:** The fraction that equates to the factor (or percentage) contributing to the variable uncertainty component is indicated, that is a factor of 5% is encoded as 0.05.

**Precision:** 0.01

**Minimum range:** 0

**Maximum range:** 1

**Range closure:** Open interval (*minimum < **uncertainty variable factor** < maximum*)

**Example:** The positional accuracy for the highest accuracy for hydrographic data in a **Spatial Quality** feature is quoted as “±5 metres + 10% depth”. The variable component in this example is depth, and the factor to be applied to the depth at a location in order to provide the variable uncertainty is **0.1**.

In this example, at a depth of 25 metres, the variable uncertainty would be 2.5 metres, and the overall best estimate of the positional accuracy would be ±7.5 metres.

**Remarks:**

No remarks.

## 29 Complex Attributes

### 29.1 contact address

**IHO Definition:** **CONTACT ADDRESS.** Direction or superscription of a letter, package, etc., specifying the name of the place to which it is directed, and optionally a contact person or organisation who should receive it.

**Indication:** The complex attribute provides the encoder with options to encode all details of a contact address.

**Sub-attributes:**

|                                |              |
|--------------------------------|--------------|
| <b>administrative division</b> | see clause x |
| <b>city name</b>               | see clause x |
| <b>country name</b>            | see clause x |
| <b>delivery point</b>          | see clause x |
| <b>postal code</b>             | see clause x |

**Remarks:**  
No remarks.

### 29.2 directional character

**IHO Definition:** **DIRECTIONAL CHARACTER.** A directional light is a light illuminating a sector of very narrow angle and intended to mark a direction to follow. (IHO Dictionary – S-32).

**Indication:** The complex attribute defines whether the light is a moiré effect light and encodes the orientation of the directional light sector.

**Sub-attributes:**

|                     |                   |
|---------------------|-------------------|
| <b>moiré effect</b> | see clause 27.181 |
| <b>orientation</b>  | see clause 29.15  |

**Remarks:**  
No remarks.

### 29.3 feature name

**IHO Definition:** **FEATURE NAME.** Provides the name of an entity, defines the national language of the name, and provides the option to display the name at various system display settings.

**Indication:** The complex attribute provides the encoder with options as to the name to display in certain system display settings.

**Sub-attributes:**

|                   |                   |
|-------------------|-------------------|
| <b>language</b>   | see clause 27.164 |
| <b>name</b>       | see clause 27.188 |
| <b>name usage</b> | see clause 27.189 |

**Remarks:**  
- For further information regarding the population of the complex attribute **feature name**, in particular the encoding of multiple instances of **feature name** for a single feature instance, see clause 2.5.8.

### 29.4 features detected

**IHO Definition:** **FEATURES DETECTED.** The uniform assessment of detected features.

**Indication:**

**Sub-attributes:**

|                                                  |                  |
|--------------------------------------------------|------------------|
| <b>least depth of detected features measured</b> | see clause 28.6  |
| <b>significant features detected</b>             | see clause 28.19 |
| <b>size of features detected</b>                 | see clause 28.20 |

**Remarks:**

- A feature in this context is meant to be any object, whether manmade or not, projecting above the seafloor, which may be a danger for surface navigation. (Refer IHO document S-44). **features detected** does not describe if features were actually detected during a hydrographic survey, but whether the survey had the capacity to detect features.

## 29.5 fixed date range

**IHO Definition:** **FIXED DATE RANGE.** An active period of a single fixed event or occurrence, as the date range between discrete start and end dates.

**Indication:** The complex attribute describes single fixed period, as the date range between its sub-attributes.

**Sub-attributes:**

|                   |                   |
|-------------------|-------------------|
| <b>date end</b>   | see clause 27.116 |
| <b>date start</b> | see clause 27.118 |

**Remarks:**

- The sub-attributes **date start** and **date end** must be encoded in the format YYYYMMDD; using 4 digits for the calendar year (YYYY) and, optionally, 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific month and/or day is required/known, the values are replaced with dashes (-).

## 29.6 frequency pair

**IHO Definition:** **FREQUENCY PAIR.** A pair of frequencies for transmitting and receiving radio signals. The shore station transmits and receives on the frequencies indicated.

**Indication:** The complex attribute describes all variations of radio receiving and transmitting.

**Sub-attributes:**

|                                          |                   |
|------------------------------------------|-------------------|
| <b>frequency shore station receives</b>  | see clause 27.146 |
| <b>frequency shore station transmits</b> | see clause 27.147 |

**Remarks:**

No remarks.

## 29.7 horizontal clearance fixed

**IHO Definition:** **HORIZONTAL CLEARANCE FIXED.** The horizontal clearance measured between two points for a fixed span.

**Indication:** The complex attribute encodes the horizontal distance .....

**Sub-attributes:**

|                                        |                   |
|----------------------------------------|-------------------|
| <b>horizontal clearance value</b>      | see clause 27.154 |
| <b>horizontal distance uncertainty</b> | see clause 28.5   |

**Remarks:**

No remarks.

## 29.8 horizontal clearance open

**IHO Definition:** **HORIZONTAL CLEARANCE OPEN.** The horizontal clearance measured between two points for an opening span.

**Indication:** The complex attribute encodes the horizontal distance .....

**Sub-attributes:**

|                                        |                   |
|----------------------------------------|-------------------|
| <b>horizontal clearance value</b>      | see clause 27.154 |
| <b>horizontal distance uncertainty</b> | see clause 28.5   |

**Remarks:**

No remarks.

## 29.9 horizontal position uncertainty (*POSACC*)

**IHO Definition:** **HORIZONTAL POSITION UNCERTAINTY.** The best estimate of the accuracy of a position. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.255, November 2000).

**Indication:** The complex attribute encodes the horizontal uncertainty associated with any horizontal measurement.

**Sub-attributes:** **uncertainty fixed** see clause 28.26  
**uncertainty variable factor** see clause 28.27

**Remarks:**

- The expected input is the maximum of the two-dimensional error. The error is assumed to be positive and negative.

## 29.10 information

**IHO Definition:** **INFORMATION.** Textual information about the feature. The information may be provided as a string of text or as a file name of a single external text file that contains the text. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Pages 2.141 and 2.209, November 2000).

**Indication:** The complex attribute provides additional textual information that cannot be provided using other allowable attributes for the feature, and defines the language of the text string.

**Sub-attributes:** **file locator** see clause 27.142  
**file reference** see clause 27.143  
**headline** see clause 27.151  
**language** see clause 27.164  
**text** see clause 27.243

**Remarks:**

- At least one of the sub-attributes **file reference** or **text** must be populated.
- The files referenced by the sub-attribute **file reference** generally contain long text strings or those that require formatting; there is no restriction on the type of text (except for lexical level) that can be held in files referenced by sub-attribute **file reference**.
- The sub-attribute **file locator** cannot be populated unless the attribute **file reference** is populated.
- For further information on the population of **information**, see clause 2.4.6.
- This complex attribute should be used, for example, to hold the information that is shown on paper charts by cautionary and explanatory notes.

## 29.11 light sector

**IHO Definition:** **LIGHT SECTOR.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

**Indication:**

**Sub-attributes:** **colour** see clause 27.105  
**directional character** see clause 29.1  
**light visibility** see clause 27.167  
**sector limit** see clause 29.23  
**value of nominal range** see clause 27.268  
**sector information** see clause 29.22  
**sector arc extension** see clause 30.3

**Remarks:**

No remarks.

## 29.12 measured distance value

**IHO Definition:** **MEASURED DISTANCE VALUE.** The distance value indicated on a distance mark, or the distance between two measured distance marks.

**Indication:**

|                        |                                     |                   |
|------------------------|-------------------------------------|-------------------|
| <b>Sub-attributes:</b> | <b>distance unit of measurement</b> | see clause 27.133 |
|                        | <b>reference location</b>           | see clause 27.210 |
|                        | <b>waterway distance</b>            | see clause 27.280 |

**Remarks:**

No remarks.

## 29.13 multiplicity of features

**IHO Definition:** **MULTIPLICITY OF FEATURES.** The number of features of identical character that exist as a co-located group. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.150, November 2000).

**Indication:** The complex attribute provides an indication as to whether the true number of features is known and, where known, the number of features.

|                        |                           |                   |
|------------------------|---------------------------|-------------------|
| <b>Sub-attributes:</b> | <b>multiplicity known</b> | see clause 27.182 |
|                        | <b>number of features</b> | see clause 27.196 |

**Remarks:**

- The attribute **multiplicity of features** must only be used to indicate the number of entities of a feature that are co-located (for example 3 overhead cables suspended over a body of water between 2 pylons), and this information is considered to be of use to the boatmaster. Where possible, features must be encoded individually.

## 29.14 online resource

**IHO Definition:** **ONLINE RESOURCE.** Information about online sources from which a resource or data can be obtained. (Adapted from ISO 19115).

**Indication:** The complex attribute describes the access to online resources according to ISO 19115.

|                        |                         |                   |
|------------------------|-------------------------|-------------------|
| <b>Sub-attributes:</b> | <b>headline</b>         | see clause 27.151 |
|                        | <b>linkage</b>          | see clause 27.168 |
|                        | <b>name of resource</b> | see clause 27.188 |

**Remarks:**

No remarks.

## 29.15 orientation

**IHO Definition:** **ORIENTATION.** The angular distance measured from true north to the major axis of the feature. (Defence Geospatial Information Working Group; Feature Data Dictionary Register, 2010).

**Indication:** The complex attribute provides the orientation value together with a measure of the uncertainty of the value.

|                        |                                |                   |
|------------------------|--------------------------------|-------------------|
| <b>Sub-attributes:</b> | <b>orientation uncertainty</b> | see clause 28.14  |
|                        | <b>orientation value</b>       | see clause 27.199 |

**Remarks:**

No remarks.

## 29.16 periodic date range

**IHO Definition:** **PERIODIC DATE RANGE.** The active period of a recurring event or occurrence.

**Indication:** The complex attribute describes the active period for a seasonal feature (for example a buoy), as the dates between its sub-attributes.

**Sub-attributes:** **date end** see clause 27.116  
**date start** see clause 27.118

**Remarks:**

- The sub-attributes **date start** and **date end** must be encoded in the format ----MMDD; using 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific day is required/known, the values are replaced with dashes (-).

## 29.17 power characteristics

**IHO Definition:** Characteristics of the power supply available

**Sub-attributes:**

**Category of Voltage** (see clause 7.203)  
**Category of Frequency** (see clause 7.250)  
**Amount of Amperage** (see clause 7.285)  
**Category of Plug** (see clause 7.229)  
**Number of Shore Connectors** (see clause 7.109)  
**Allowed Consumption** (see clause 7.286)

**Remarks:**

No remarks.

## 29.18 radar wave length (*RADWAL*)

**IHO Definition:** **RADAR WAVE LENGTH.** The distance between two successive peaks (or other points of identical phase) on an electromagnetic wave in the radar band of the electromagnetic spectrum. (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.172, November 2000).

**Indication:** The complex attribute describes the wave length, as the combination of its sub-attributes.

**Sub-attributes:** **radar band** see clause 27.205  
**wave length value** see clause 27.281

**Remarks:**

No remarks.

## 29.19 rhythm of light

**IHO Definition:** **RHYTHM OF LIGHT.** The sequence of times occupied by intervals of light/sound and eclipse/silence for all light characteristics or sound signals.

**Indication:** The complex attribute describes the rhythm of a light (or a light sector).

**Sub-attributes:** **light characteristic** see clause 27.166  
**signal group** see clause 27.224  
**signal period** see clause 27.225

**signal sequence**      see clause 29.27

Remarks:  
No remarks.

## 29.20 schedule by day of week

IHO Definition: **SCHEDULE BY DAY OF WEEK.** The nature and timings of a daily schedule by days of the week.

Indication: The complex attribute encodes the regular schedule for a service.

Sub-attributes: **category of schedule**      see clause 27.80  
**time intervals by day of week**      see clause 29.36

Remarks:  
No remarks.

## 29.21 sector characteristics

IHO Definition: **SECTOR CHARACTERISTICS.** Describes the characteristics of a light sector.

Indication: The complex attribute describes the characteristics of a light sector.

Sub-attributes: **light characteristic**      see clause 27.166  
**light sector**      see clause 29.11  
**signal group**      see clause 27.224  
**signal period**      see clause 27.225  
**signal sequence**      see clause 29.27

Remarks:  
No remarks.

## 29.22 sector information

IHO Definition: **SECTOR INFORMATION.** Additional textual information about a light sector.

Indication: The complex attribute provides additional textual information that cannot be provided using other allowable attributes for the feature, and defines the language of the text string.

Sub-attributes: **language**      see clause 27.164  
**text**      see clause 27.243

Remarks:

- This complex attribute should be used, for example, to hold the information related to the characteristics of a complex light sector.
- No formatting of text is possible within **sector information**. If formatted text is required, then an associated text file referenced by the complex attribute **information**, sub-attribute **file reference** must be used (see clause 27.143).

## 29.23 sector limit

IHO Definition: **SECTOR LIMIT.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

The sector limit specifies the limits of the sector in a clockwise direction around the central feature (for example a light). (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.184, November 2000).

**Indication:** The complex attribute describes the angle of a light sector as defined by the sub-attributes.

**Sub-attributes:** **sector limit one** see clause 29.24  
**sector limit two** see clause 29.25

**Remarks:**  
 No remarks.

## 29.24 sector limit one (SECTR1)

**IHO Definition: SECTOR LIMIT ONE.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

**sector limit one** specifies the first limit of the sector. The order of **sector limit one** and **sector limit two** is clockwise around the central feature (for example a light). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.184, November 2000).

**Indication:** The complex attribute describes the line or bearing of a light where the character changes or the light is obscured.

**Sub-attributes:** **sector bearing** see clause 27.219  
**sector line length** see clause 27.220

**Remarks:**

- The values given to the common limits of adjacent sectors should be identical.
- The orientation of the bearing is from seaward to the central feature. This conforms with the method used in "List of Lights" publications.
- A generic term such as "to shore" cannot be used; a specific bearing must be encoded. Where a light sector limit is defined as "to the shore", it should be encoded using a value that ensures that, when the limit is drawn, it will fall entirely on land.

## 29.25 sector limit two (SECTR2)

**IHO Definition: SECTOR LIMIT TWO.** A sector is the part of a circle between two straight lines drawn from the centre to the circumference. (Advanced Learner's Dictionary, 2nd Edition).

**sector limit two** specifies the second limit of the sector. The order of **sector limit one** and **sector limit two** is clockwise around the central feature (for example a light). (S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.184, November 2000).

**Indication:** The complex attribute describes the line or bearing of a light where the character changes or the light is obscured.

**Sub-attributes:** **sector bearing** see clause 27.219  
**sector line length** see clause 27.220

**Remarks:**

- The values given to the common limits of adjacent sectors should be identical.
- The orientation of the bearing is from seaward to the central feature. This conforms with the method used in "List of Lights" publications.
- A generic term such as "to shore" cannot be used; a specific bearing must be encoded. Where a light sector limit is defined as "to the shore", it should be encoded using a value that ensures that, when the limit is drawn, it will fall entirely on land.

## 29.26 shape information

**IHO Definition: SHAPE INFORMATION.** Textual information about the shape of a non-standard topmark.

**Indication:** The complex attribute provides additional textual information that cannot be provided using the attribute **topmark/daymark shape**.

Sub-attributes: **language** see clause 27.164  
**text** see clause 27.243

Remarks:

- No formatting of text is possible within **shape information**. If formatted text is required, then an associated text file referenced by the complex attribute **information** must be used (see clause 29.9).

## 29.27 signal sequence (*SIGSEQ*)

IHO Definition: **SIGNAL SEQUENCE**. The sequence of times occupied by intervals of light/sound and eclipse/silence for all "light characteristics" or sound signals. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.191, November 2000).

Indication: The complex attribute provides the signal sequence for non-fixed lights and sound signals.

Sub-attributes: **signal duration** see clause 27.221  
**signal status** see clause 27.226

Remarks:

No remarks.

## 29.28 source indication

IHO Definition: Information about the source document, publication, or reference from which object data or textual material included or referenced in a dataset are derived.

Attribute Type: Complex

Sub-attributes: **reported date** see clause 27.216  
**category of authority** see clause 27.20  
**country name** see clause 27.110  
**source type** see clause 27.230  
**source** see clause 27.228  
**feature name** see clause 29.3

Remarks:

- Content of featureName is source authority name.
- see also **Fehler! Verweisquelle konnte nicht gefunden werden.**

Inland specific encoding Instructions:

US: The source indicatio is a mandatory attribute and must be coded for all features in the IENC. All features in the Data Classification and Encoding Guide state that **source indication** is Conditional (C); the condition that must be met is that it is a US produced chart.

EUR: The source indication must only be coded for a feature in an IENC when the source is different from the producer of the IENC and the producer wants to exclude liability.

BR: SORIND is an optional attribute which may be used for an object in an IENC when the source is different from the producer of the IENC.

## 29.29 spatial accuracy

**IHO Definition: SPATIAL ACCURACY.** Provides an indication of the vertical and horizontal positional uncertainty of bathymetric data, optionally within a specified date range.

**Indication:** The complex attribute defines the horizontal and vertical position accuracy of bathymetric features, which may optionally be degraded over time.

**Sub-attributes:**

|                                        |                  |
|----------------------------------------|------------------|
| <b>fixed date range</b>                | see clause 29.5  |
| <b>horizontal position uncertainty</b> | see clause 29.9  |
| <b>vertical uncertainty</b>            | see clause 29.42 |

**Remarks:**

- See clauses 3.8 and 24.5 for encoding guidance for the population of the sub-complex attributes **horizontal position uncertainty** and **vertical uncertainty**.

## 29.30 speed

**IHO Definition: SPEED.** Rate of motion. The terms speed and velocity are often used interchangeably, but speed is a scalar, having magnitude only, while velocity is a vector quantity, having both magnitude and direction. (Adapted from IHO Dictionary, S-32).

**Indication:** The complex attribute encodes the range of the speed at a location.

**Sub-attributes:**

|                      |                   |
|----------------------|-------------------|
| <b>speed maximum</b> | see clause 27.232 |
| <b>speed minimum</b> | see clause 27.233 |

**Remarks:**

No remarks.

## 29.31 surface characteristics

**IHO Definition: SURFACE CHARACTERISTICS.** The general nature of the material of which the land surface or the seabed is composed.

**Indication:**

**Sub-attributes:**

|                                             |                   |
|---------------------------------------------|-------------------|
| <b>nature of surface</b>                    | see clause 27.194 |
| <b>nature of surface – qualifying terms</b> | see clause 27.195 |
| <b>underlying layer</b>                     | see clause 27.258 |

**Remarks:**

No remarks.

## 29.32 survey date range

**IHO Definition: SURVEY DATE RANGE.** The complex attribute describes the period of the hydrographic survey, as the time between its sub-attributes.

**Indication:** The complex attribute describes the period of the hydrographic survey, as the time between its sub-attributes.

**Sub-attributes:**

|                   |                   |
|-------------------|-------------------|
| <b>date end</b>   | see clause 27.116 |
| <b>date start</b> | see clause 27.118 |

**Remarks:**

- The sub-attributes **date start** and **date end** must be encoded using 4 digits for the calendar year (YYYY) and, optionally, 2 digits for the month (MM) (for example April = 04) and 2 digits for the day (DD). When no specific month and/or day is required/known, indication of the month and/or day is replaced with dashes (-).

### 29.33 telecommunications

**IHO Definition:** **TELECOMMUNICATIONS.** A means or channel of communicating at a distance by electrical or electromagnetic means such as telegraphy, telephony, or broadcasting.

**Indication:** The complex attribute describes the different telecommunications methods and contact details.

**Sub-attributes:**

|                                     |                   |
|-------------------------------------|-------------------|
| <b>contact instructions</b>         | see clause 27.109 |
| <b>telecommunication identifier</b> | see clause 27.241 |
| <b>telecommunication service</b>    | see clause 27.242 |

**Remarks:**

- If no value is populated for the sub-attribute **telecommunication service**, this means the service is by voice communication.

### 29.34 tidal stream panel values

**IHO Definition:** **TIDAL STREAM PANEL VALUES.** The direction of the flow and the tidal current rate from 6 hours before to 6 hours after high water (HW) or low water (LW) at the reference tide station, at hourly or sub-hourly intervals. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.210, November 2000).

**Indication:**

**Sub-attributes:**

|                            |                   |
|----------------------------|-------------------|
| <b>reference tide</b>      | see clause 27.211 |
| <b>reference tide type</b> | see clause 27.212 |
| <b>stream depth</b>        | see clause 27.239 |
| <b>tidal stream value</b>  | see clause 29.35  |

**Remarks:**

No remarks.

### 29.35 tidal stream value

**IHO Definition:** **TIDAL STREAM VALUE.** A measurement of the direction and speed of a tidal stream at a given time relative to the reference tide.

**Indication:**

**Sub-attributes:**

|                              |                   |
|------------------------------|-------------------|
| <b>orientation</b>           | see clause 29.15  |
| <b>speed maximum</b>         | see clause 27.232 |
| <b>time relative to tide</b> | see clause 27.250 |

**Remarks:**

No remarks.

### 29.36 time intervals by day of week

**IHO Definition:** **TIME INTERVALS BY DAY OF WEEK.** The regular weekly operation times of a service or schedule.

**Indication:** The complex attribute describes the timings for a regular service schedule.

**Sub-attributes:**

|                             |                   |
|-----------------------------|-------------------|
| <b>day of week</b>          | see clause 27.120 |
| <b>day of week is range</b> | see clause 27.121 |
| <b>time of day end</b>      | see clause 27.248 |
| <b>time of day start</b>    | see clause 27.249 |

**Remarks:**

- At least one of the sub-attributes **day of week**, **time of day start** or **time of day end** must be encoded. Where populated, the number of instances of **time of day start** must be the same as the number of instances of **time of day end**.

- The sub-attribute **day of week is range** indicates whether an instance of **time intervals by day of week** encodes a range of days or discrete days. The day(s) or day range(s) are encoded using sub-attribute **day of week**. Where **day of week is range** is populated as *True*, there must be exactly two instances of the attribute **day of week**. If **day of week** is not populated, this indicates that the same schedule applies every day (Monday through Sunday). Multiple ranges or mixing range with discrete days(s) is not allowed (if this is required another instance of **time intervals by day of week** must be encoded).
- An indeterminate range may be indicated with a null value at the appropriate position in the sequence.

### 29.37 topmark (TOPMAR)

**IHO Definition:** **TOPMARK**. A characteristic shape secured at the top of a buoy or beacon to aid in its identification. (IHO Dictionary – S-32).

**Indication:**

|                                      |                   |
|--------------------------------------|-------------------|
| <b>Sub-attributes:</b> <b>colour</b> | see clause 27.105 |
| <b>colour pattern</b>                | see clause 27.106 |
| <b>topmark/daymark shape</b>         | see clause 27.252 |
| <b>shape information</b>             | see clause 29.26  |

**Remarks:**

No remarks.

### 29.38 vertical clearance closed

**IHO Definition:** **VERTICAL CLEARANCE CLOSED**. The vertical clearance of a feature in closed condition (for example a closed lifting bridge) measured from the horizontal plane towards the feature overhead. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.235, November 2000).

**Indication:** The complex attribute encodes the vertical distance from a defined vertical datum to the underside of a an opening overhead feature when it is in the closed position.

|                                                        |                   |
|--------------------------------------------------------|-------------------|
| <b>Sub-attributes:</b> <b>vertical clearance value</b> | see clause 27.271 |
| <b>vertical uncertainty</b>                            | see clause 29.42  |

**Remarks:**

No remarks.

### 29.39 vertical clearance fixed

**IHO Definition:** **VERTICAL CLEARANCE FIXED**. The vertical clearance measured from the horizontal plane towards a fixed (non-opening) feature overhead. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.234, November 2000).

**Indication:** The complex attribute encodes the vertical distance from a defined vertical datum to the underside of a fixed overhead feature.

|                                                        |                   |
|--------------------------------------------------------|-------------------|
| <b>Sub-attributes:</b> <b>vertical clearance value</b> | see clause 27.271 |
| <b>vertical uncertainty</b>                            | see clause 29.42  |

**Remarks:**

- In the case of cables carrying high voltages an additional clearance of from 2 to 5 metres may be needed to avoid an electrical discharge. When known, the authorised safe clearance (known in the UK as the Safe Overhead Clearance) which is the physical clearance minus a safety margin shall be stated, using the attribute **vertical clearance safe** (see clause 29.41). **vertical clearance fixed** must not be used to populate authorized safe clearances.

## 29.40 vertical clearance open

**IHO Definition:** **VERTICAL CLEARANCE OPEN.** The vertical clearance of a feature in opened condition (for example an open lifting bridge) measured from the horizontal plane towards the feature overhead. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.236, November 2000).

**Indication:** The complex attribute encodes the vertical distance from a defined vertical datum to the underside of an opening overhead feature when it is in the open position.

**Sub-attributes:**

|                                     |                   |
|-------------------------------------|-------------------|
| <b>vertical clearance unlimited</b> | see clause 27.270 |
| <b>vertical clearance value</b>     | see clause 27.271 |
| <b>vertical uncertainty</b>         | see clause 29.42  |

**Remarks:**  
No remarks.

## 29.41 vertical clearance safe

**IHO Definition:** **VERTICAL CLEARANCE SAFE.** The safe vertical clearance of a feature measured from the horizontal plane towards the feature overhead. (Adapted from S-57 Edition 3.1, Appendix A – Chapter 2, Page 2.237, November 2000).

**Indication:** The complex attribute encodes the safe vertical distance from a defined vertical datum to the lowest point of an electrical cable over navigable water.

**Sub-attributes:**

|                                 |                   |
|---------------------------------|-------------------|
| <b>vertical clearance value</b> | see clause 27.271 |
| <b>vertical uncertainty</b>     | see clause 29.42  |

**Remarks:**  
No remarks.

## 29.42 vertical uncertainty (*SOUACC*, *VERACC*)

**IHO Definition:** **VERTICAL UNCERTAINTY.** The best estimate of the vertical accuracy of depths, heights, vertical distances and vertical clearances.

**Indication:** The complex attribute encodes the vertical uncertainty associated with any vertical measurement.

**Sub-attributes:**

|                                    |                  |
|------------------------------------|------------------|
| <b>uncertainty fixed</b>           | see clause 28.26 |
| <b>uncertainty variable factor</b> | see clause 28.27 |

**Remarks:**  
No remarks.

## 29.43 vessel speed limit

**IHO Definition:** **VESSEL SPEED LIMIT.** The maximum allowed rate of travel for a vessel in an area in knots.

**Indication:** The complex attribute describes the speed limit for vessels in an area where speed is restricted.

**Sub-attributes:**

|                     |                   |
|---------------------|-------------------|
| <b>speed limit</b>  | see clause 27.230 |
| <b>speed units</b>  | see clause 27.235 |
| <b>vessel class</b> | see clause 27.275 |

**Remarks:**  
- The speed limit in an area may differ for different classes of vessel.

## 29.44 zone of confidence

IHO Definition: **ZONE OF CONFIDENCE.** The overall indication of the quality of bathymetric data within an area based on the positional accuracy, survey equipment and coverage; optionally within a specified data range.

Indication: The complex attribute defines the overall indication of the quality of bathymetric data, which may optionally be degraded over time.

|                        |                                               |                   |
|------------------------|-----------------------------------------------|-------------------|
| <u>Sub-attributes:</u> | <b>category of zone of confidence in data</b> | see clause 27.102 |
|                        | <b>fixed date range</b>                       | see clause 29.5   |
|                        | <b>horizontal position uncertainty</b>        | see clause 29.9   |
|                        | <b>vertical uncertainty</b>                   | see clause 29.42  |

Remarks:

- See clauses 3.8 and 24.5 for encoding guidance for the population of the sub-complex attributes **horizontal position uncertainty** and **vertical uncertainty**.

## 30 ECDIS System (Portrayal) Attributes

### 30.1 default clearance depth

**IHO Definition:** **DEFAULT CLEARANCE DEPTH.** The depth value determined for an underwater hazard of unknown depth, based on the depth of the surrounding area.

**Attribute Type:** Real

**Unit:** Defined as an attribute in the IENC Dataset Discovery Metadata: metre (m)

**Precision:** 0.1m

**Minimum range:** -30

**Maximum range:** 12500

**Range closure:** Open interval  $(\text{minimum} < \text{default clearance depth} < \text{maximum})$

**Examples:** **12.5** for a default clearance depth of 12.5 metres  
**-2.4** for a drying default clearance height of 2.4 metres

**Remarks:**

- The attribute **default clearance depth** must be populated with a value, which must not be an empty (null) value, only if the attribute **value of sounding** for the feature instance is populated with an empty (null) value and the attribute **height**, if an allowable attribute for the feature, is not populated.
- The value for **default clearance depth** is determined from the attribute **depth range minimum value** for the surrounding encoded **Depth Area(s)** or **Dredged Area** (see clauses 11.4 and 11.6) in accordance with the Tables below. For an area feature covered by more than one depth area, the **default clearance depth** is determined based on the **depth range minimum value** of the shoalest of the depth areas covering the feature.
- The auto-populated value for **default clearance depth** may be amended by the Data Producer if the resulting isolated danger indication in the Inland ECDIS or ECS is not considered appropriate (if, for example, it is known that vessels having a draught deeper than 20.1 metres are able to navigate safely in the area; or if the Data Producer wishes to indicate that only vessels to a specified draught that is less than 20 metres may navigate safely in the area).
- A drying height is indicated by a negative value.

The following Tables provide an indication for the values (if relevant) to be populated for the attribute **default clearance depth**. The Tables have been partitioned such that the top section has the precondition that the target feature (**Obstruction**, **Underwater/Awash Rock** or **Wreck**) is completely covered by **Depth Area** and/or **Dredged Area** feature(s) having a known value for the attribute **depth range minimum value**; and the bottom section has the precondition that the target feature is of unknown depth (attribute **value of sounding** = Unknown) and is completely or partially covered by an **Unsurveyed Area** feature, or a **Depth Area** and/or **Dredged Area** feature having an unknown value for the attribute **depth range minimum value**.

In the Tables:

- The symbol “/” indicates that this attribute is not relevant for the feature instance and therefore is not present. Where “/” appears in the **default clearance depth** column, the attribute must not be populated.
- A blank indicates that the attribute may have any allowable value, including an unknown (empty (null)) value. For non-mandatory attributes, a blank also indicates that the attribute may not be present.
- Where attribute values are quoted:
  - Enumerate values separated by commas indicate that any one of the listed values may be populated;
  - “Known” means that the attribute is mandatory and has been populated with a value;
  - “Unknown” means that the attribute is mandatory and is therefore present, but has not been populated with a value;
  - “Empty (null)” means that the attribute is not mandatory, but is present and has no value. For the purposes of these Tables, “Empty (null)” also equates to the non-mandatory attribute not being present for the feature instance.
  - “Least Depth” in the **default clearance depth** column is related to the underlying Skin of the Earth depth feature(s) where the value for attribute **depth range minimum value** for the covering **Depth Area** and/or **Dredged Area** feature(s) is known, and is determined as follows:
    - For features of geometric primitive point covered by a **Depth Area** or **Dredged Area** feature; or for features of geometric primitive curve or surface covered by a single **Depth Area** or **Dredged Area**

- feature, the value of the attribute **depth range minimum value** for the **Depth Area** or **Dredged Area**. For features of geometric primitive curve or surface covered by multiple **Depth Area** and/or **Dredged Area** features, the shoalest value of the attribute **depth range minimum value** for the **Depth Area/Dredged Area** features.

| category of obstruction                                                                                                                                 | exposition of sounding | height  | value of sounding | water level effect | default clearance depth |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|---------|-------------------|--------------------|-------------------------|
| <b>For features where all covering depth range minimum values are known</b>                                                                             |                        |         |                   |                    |                         |
|                                                                                                                                                         | /                      | Known   | /                 | 1,2                | /                       |
|                                                                                                                                                         | /                      | Unknown | /                 | 1,2,7              | /                       |
|                                                                                                                                                         |                        | /       | Known             | 3,4,5, Unknown     | /                       |
|                                                                                                                                                         | 1,3                    | /       | Unknown           | 3                  | <b>Least Depth</b>      |
| 6                                                                                                                                                       | 2, Empty (null)        | /       | Unknown           |                    | <b>0.1</b>              |
|                                                                                                                                                         | 2, Empty (null)        | /       | Unknown           | 3                  | <b>0.1</b>              |
| ≠ 6                                                                                                                                                     | 2, Empty (null)        | /       | Unknown           | 5                  | <b>0</b>                |
| ≠ 6                                                                                                                                                     | 2, Empty (null)        | /       | Unknown           | 4, Unknown         | <b>-15</b>              |
| <b>For features of unknown depth, covered or partially covered by Unsurveyed Area; or Depth/Dredged Area where depth range minimum value is unknown</b> |                        |         |                   |                    |                         |
| 6                                                                                                                                                       |                        | /       | Unknown           |                    | <b>0.1</b>              |
|                                                                                                                                                         |                        | /       | Unknown           | 3                  | <b>0.1</b>              |

**Table 30.3 – Values for default clearance depth – Wreck features**

### 30.2 in the water

**IHO Definition:** **IN THE WATER.** An indication if the feature is located in or over navigable water.

**Attribute Type:** Boolean

**Indication:** A True value is an indication that the feature is located in or over navigable water.

**Remarks:**

- A True value is an indication that the feature is to be included in the Inland ECDIS or ECS Base Display viewing group.

### 30.3 sector arc extension

**IHO Definition:** **SECTOR ARC EXTENSION.** An indication that the default radius of a sector arc is to be extended by 5mm.

**Attribute Type:** Boolean

**Indication:** A True value indicates that a sector arc radius is to be extended 5 millimetres beyond the default. Required where there is more than one light sector covering the same or similar angle.

**Remarks:**

- The requirement for a sector arc to be extended is calculated by IENC production software systems.

### 30.4 surrounding depth

**IHO Definition: SURROUNDING DEPTH.** The depth value determined for seabed around an underwater hazard, based on the depth of the surrounding area.

**Attribute Type:** Real

**Unit:** Defined as an attribute in the IENC Dataset Discovery Metadata: metre (m)

**Precision:** 0.1m

**Minimum range:** -30

**Maximum range:** 12500

**Range closure:** Open interval (*minimum* < **surrounding depth** < *maximum*)

**Example:** 20 for a surrounding depth of 20 metres

**Remarks:**

- The value for **surrounding depth** is determined from the attribute **depth range minimum value** for the surrounding encoded **Depth Area(s)** or **Dredged Area** (see clauses 11.4 and 11.6). For an area feature covered by more than one depth area, the **surrounding depth** is determined as the **depth range minimum value** of the deeper of the depth areas covering the feature.
- **surrounding depth** must be populated with a value, which must not be an empty (null) value.
- For features that fall entirely within an **Unsurveyed Area** feature, **surrounding depth** must be populated with value 0. If an area feature falls partly within **Unsurveyed Area** and partly within **Depth Area** or **Dredged Area** features, **surrounding depth** must be populated in accordance with the first bullet above.
- **surrounding depth** is used by the production software to determine the depth value to be used by the Inland ECDIS or ECS at which a feature is to be considered to be in “safe” or “unsafe” water based on the boatmaster’s selected safety depth.

## 31 Updating

### Remarks:

- An IENC Update will be rejected by the Inland ECDIS or ECS if it is located outside the area of data coverage for the dataset (that is, area covered by the Meta feature **Data Coverage** with attribute **category of coverage** = 1 (coverage available)) or if it changes the extent of this area. Where the area of data coverage for a base IENC dataset is to be changed, this must be done by issuing a New Edition of the dataset.
- It has been reported that grouping new or modified soundings into existing sounding groups (see clause 11.3) in an IENC Update negatively impacts the discovery of the changes to the bathymetry by boatmasters. Therefore, encoders are advised that soundings added or modified as part of an IENC Update should be encoded as individual sounding objects or, if in close proximity, may be included as a single grouped sounding object. When a New Edition of the IENC is produced, soundings may be re-grouped in accordance with the Data Producer's standard practices.
- When updating the geometry of curve features, compilers must note the requirement for the vector records making up the curve feature to be referenced sequentially. Additionally, for curve features comprising multiple edges, the end node of a vector record must be the same as the start node of the following vector record. It has been reported that some Inland ECDIS or ECS reject IENC Updates where the geometry does not conform to these requirements.

### 31.1 Issuing Updates in advance

Under certain conditions, it may be necessary for a Data Producer to issue Update information in advance. For example, a change in a traffic routing system must be made public before the new situation is implemented. Within an Update dataset there is no means of indicating the date at which an Update must be applied. Therefore, when an Update dataset is received by an end-user, it must be applied immediately. To avoid situations where Update information would cause target data to reflect a situation that does not yet exist, the following encoding rules must be followed:

- If the advance Update information contained in the Update message involves the addition of features to the existing data (for example a new lighthouse), the **date start** sub-attribute for the complex attribute **fixed date range** on the new features must contain the date at which the Update becomes active.
- If the advance Update information contained in the Update message involves the modification of existing features (for example a change in a traffic routing system), it must be treated as a deletion of the existing features and replacement with new features. See a) above and c) below.
- If the advance Update information contained in the Update message involves the deletion of existing features (for example the removal of a buoy), the Update message must set the **end date** sub-attribute for the complex attribute **fixed date range** of all features to be deleted to the date at which the Update becomes active. **NB.** This Update message does not actually delete the features from the dataset, it simply indicates that on the date held in the **date end** sub-attribute for the complex attribute **fixed date range** they become obsolete. A further Update to actually delete the obsolete features from the dataset should be sent at the time that the change in the real world occurs.
- To highlight to the boatmaster that the advance Update information contained in an Update message will take place in the future, it is recommended that a **Caution Area** feature (see clause 16.11) be created covering the location at which the future changes will take place. A warning note specifying, in plain language, the nature of the future change should be encoded, using the complex attribute **information** (see clause 2.4.6). The sub-attribute **date end** for the complex attribute **fixed date range** on the **Caution Area** must be set to the date at which the change described in the Update becomes active.

Changes to the **date start** and **date end** for **fixed date range** cannot be applied to spatial types. Therefore, a change to the geometry of a real world feature (for example the relocation of a buoy) to be applied in the future can only be achieved by updating all of the geo and spatial types involved.

As a consequence of issuing advance information Updates, more than one instance of a particular real world feature could exist in the dataset.

Further information regarding issuing Update information in advance can be found at clause 31.2.3.

### 31.1.1 Advance notification of changes to traffic separation schemes

It is important that boatmasters be provided with advance notification of changes to traffic separation schemes (TSS), which may include modification to an existing TSS, addition of a new TSS or removal of a TSS. In order to provide a consistent approach to boatmasters regarding advance notification of changes to a traffic separation scheme, the following procedure should be adopted:

- 1) At least one month before the changes to the TSS come into force, issue an updated dataset (as an Update or a New Edition) which:
  - Adds new or amended TSS component features. These features must have **date start** for **fixed date range** populated with the date that the changes to the TSS come into force.
  - Adds **date end** for **fixed date range** (populated with the date of the day before the changes to the TSS come into force) to any component features of the existing TSS that are to be changed or deleted.
  - Creates a **Caution Area** surface feature (see clause 16.11) covering the geographic extent of both the current and the future TSS. The complex attribute **information** (see clause 2.4.6) must be used to explain the change to the TSS, for example *“The traffic separation scheme off Cape Bon is to be modified at 0000 UTC on 1 July 2009. This IENC includes all the information before and after the change, indicated by the sub-attributes **date end** (before the change) and **date start** (after the change) for the complex attribute **fixed date range** on the components of the scheme”*. The sub-attribute **date end** on **fixed date range** for the **Caution Area** should be populated with the date at which the change comes into force or, if encoders wish to provide extended information to the Mariner that a change has been made, with a date up to a month after the change comes into force. If the current and the future TSS are not in the same geographic area, it may be required to encode two distinct **Caution Area** surface features. A picture file may be referenced by the **Caution Area** using the attribute **pictorial representation** if it is considered useful, for example the equivalent paper chart representation of the amended or new TSS.
- 2) As soon as possible after the modified/new/deleted TSS comes into force, issue an updated dataset (as an Update or New Edition) which:
  - Deletes the changed or redundant component features of the former TSS.
  - Removes the attribute **fixed date range** from the component features of the new TSS.
- 3) The **Caution Area** must also be removed by Update, either as part of the Update to remove the redundant component features of the former TSS, or as a separate Update at a later date, corresponding to the date populated in the sub-attribute **date end** for the complex attribute **fixed date range** for the **Caution Area**.

## 31.2 Guidelines for encoding Temporary and Preliminary IENC Updates

### 31.2.1 Introduction

The following provides high level guidance for the promulgation of the equivalent of paper chart Temporary (T) and Preliminary (P) Notices to Mariners (NMs) via IENC Updates. This guidance allows for some latitude in its application and is dependent on the assessment of each particular case, and as such relies ultimately on the judgement of each IENC producer.

### 31.2.2 Temporary (T) Notices to Skippers

1. In the maritime area Temporary Notices to Mariners, (T)NMs, for paper charts are defined in S-4, Section B-600. A (T)NM promulgates navigationally significant information that will remain valid only for a limited period of time.

For the paper chart, the convention is for the Mariner to insert the Update on the chart in pencil, and erase it when the (T)NM is cancelled.

S-401 provides mechanisms which allow IENCs to be automatically updated. This allows the affected IENC(s) to be continually updated in a timely manner for the duration of the NM without additional workload for the boatmaster.

Producers must promulgate temporary information which is safety-related or which otherwise needs to be advised to the boatmaster urgently by IENC Update to provide the Inland ECDIS or ECS user

with an updated System Database. This service corresponds to the service that (T)NMs offer to the paper chart user.

2. Update encoding for an IENC and (T)NM for the paper chart are two completely different communication processes for promulgating information to the Mariner/boatmaster. Since these processes are different (but not supposed to be independent), and the products to which they apply are also different, it is recommended that IENC Updates be derived from the source information rather than the paper chart (T)NM. Often the (T)NM for paper chart does not provide enough detail to apply the relevant IENC Update.
3. If possible the information should be encoded with the relevant features. However, producers should consider the following:
  - An IENC Update must not be initiated if the information will no longer be valid by the time it is received by the boatmaster; this will depend upon the timescales relating to the Producer Nation's IENC Updating regime. Shorter time periods may be covered by other services, e.g. Notices to Skippers. If known, the IENC Update should include an indication of how long the temporary change will remain in force.
  - If it is unlikely that the producer will be notified when a temporary change will revert to its original charted state, the producer should consider an alternative method such as a general note or by issuing an IENC Update explaining, for example, that the aids to navigation within an area are reported to be unreliable.

It is important that producers should consider constraints of time when identifying the encoding method. Time consuming and unnecessarily complex methods of encoding should be avoided.

4. The overuse of **Caution Area** features (especially **Caution Area** of type surface – see clause 16.11) for temporary information should be avoided. The **Caution Area** feature is used when it is relevant for the situation and/or when a particular change needs a special warning. **Caution Area** may be used when the relevant features cannot be encoded, for example information cannot be displayed clearly or cannot be easily promulgated due to time constraints.
5. To correctly encode an IENC Update the source information is essential in determining which elements of the Update are reliable, which are permanent and which are temporary. The attribute **status** with value 7 (temporary) should only be used in an Update when it is certain that the status of a feature is confirmed as temporary.
6. Use of complex attribute **fixed date range**:

The earliest date on which a feature will be present (**date start**) and the latest date on which a feature will be present (**date end**) must only be encoded when known. Where such dates have been encoded for any feature that is the structure component of a **Structure/Equipment** feature association, all other component features within the relationship must not extend beyond the temporal attribute values encoded for the structure feature.

The IENC Update should be issued as close as possible to the earliest date of the change (**date start**), unless it is appropriate to provide the information well in advance. A feature no longer present should be removed from the display by issuing a further Update as soon as possible after the return to the original charted state (**date end**). The timing of the issue of these Updates will depend upon the Producers IENC Updating regime and its corresponding timescales.

When an IENC Update promulgates information well in advance and uses **fixed date range**, a **Caution Area** feature may be used in order to inform boatmasters that temporal information exists at some future point in time.

7. The complex attribute **information** (see clause 2.4.6), sub-attribute **text** should be used as required to provide supplementary or contextual information when encoding temporary (or preliminary) information. When the text is too long to be encoded using **information (text)** (see clause 27.243), the complex attribute **information**, sub-attribute **file reference** should be used to encode a reference to an IENC support file. Encoders using **information** to provide positional information must express the coordinate values in WGS 84. If it is deemed necessary a picture file (referenced using attribute **pictorial representation**) may be included.
8. IENC Updates issued for temporary information should be carefully managed and reviewed regularly to consider whether further action is necessary. New information may have been received that

necessitates the issuing of a new Update to modify or cancel the previous one. Producers should make it easy to recover the original charted state before the temporary changes came into effect.

9. Further verification is recommended to make sure that the encoded IENC Update is consistent with the corresponding paper chart Notice to Mariners.

10. Guidelines for typical cases:

- a) Individual new physical features (for example wreck, buoy) with no associated explicit or implicit area associated (for example restricted area):
  - Encode the relevant S-401 feature.
  - In this instance a **Caution Area** feature would not normally be used.
- b) Individual new physical feature(s) with an associated explicit area around it:
  - Encode the relevant S-401 surface feature (for example **Restricted Area**). The relevant feature is encoded for the new physical feature. However, when the area is an “entry prohibited area” or a **Caution Area** feature the new physical feature(s) may be omitted to simplify encoding unless it is navigationally significant.
- c) Individual new physical feature with a notification of caution, for example “Boatmasters are advised to navigate with caution...”:
  - Encode the relevant S-401 feature. Additional clarification and advice may, if required, be provided using the complex attribute **information** (see clause 2.4.6). Exceptionally, a **Caution Area** feature may be encoded to highlight the caution if considered necessary.
- d) Obstructions (including wrecks) reported to exist within an area:
  - Encode an **Obstruction** or **Wreck** feature of type surface (see clauses 13.6 and 13.5).
- e) New simple surface feature (military practice area, dredged area):
  - Encode the relevant S-401 surface feature.
  - Supplementary information is provided using the complex attribute **information** (see clause 2.4.6).
  - Normally, a **Caution Area** feature is not added.
- f) Complex information within an area (for example works in progress where the changes are numerous or involve complex changes to the topology):
  - Encode the surface feature. It should be encoded with the relevant S-401 feature or, if more suitable or by default, a **Caution Area** feature (see clause 16.11). Supplementary or contextual information is provided using the complex attribute **information** (see clause 2.4.6). When the available information is sufficiently detailed, navigationally significant features (for example navigational aids, obstructions) should be encoded or modified within the area. When the available information does not permit this, a **Caution Area** feature defining the area is preferred.
- g) Changes to an existing feature (for example navigational aid):
  - In these instances it is usually only necessary to change the attributes values. A **Caution Area** feature (see clause 16.11) may be used to warn the boatmaster if it is considered necessary.
- h) Buoy temporarily moved:
  - When a buoy is temporarily moved then it, and any associated features, are “moved” to the new position and the attribute **status** = 7 (temporary) is populated. Alternative encodings are possible, for example, if the move is for a fixed period of time. In these cases the feature, and any associated components, can be created in the temporary position with sub-attribute **date end** for the complex attribute **fixed date range** populated with the date corresponding to the end of the fixed period of time. The currently charted feature, and any associated components, should have **date start** for the complex attribute **fixed date range** also populated with the date corresponding to the end of the fixed period of time. A **Caution Area** feature may, if considered necessary, be added.
- i) Light temporarily extinguished:
  - The attribute **status** for the **Light** feature is populated with the values 11 (extinguished) and 7 (temporary).
- j) Change to a maintained depth in a dredged area:

- When information is received from an official or recognised survey authority relating to a dredged area where the dredged depth has changed, the attribute value of **depth range minimum value** for the **Dredged Area** feature should be changed to the value provided by the survey.
- Where a **Sounding** feature is encoded in a dredged area to indicate shoaler depths, the attribute value **exposition of sounding** = 2 (shoaler than the depth of the surrounding depth area) should not be populated (see clauses 11.3.1 and 11.4.1). Where required, the shoal depths should be encoded using **Sounding**, with the appropriate underlying depth information (**Depth Contour** and **Depth Area**) to support the depths. Alternatively, the attribute **depth range maximum value** for the **Dredged Area** may be set to the designed dredged depth for the dredged area and the attribute **depth range minimum value** set to the value of the shoalest depth, or a **Caution Area** feature may be encoded covering the shoaler depth area with the depth information provided using the complex attribute **information** (see clause 2.4.6). Where the shoal depths are close to the edge of the dredged area, the dredged area limit may be adjusted to exclude the shoal depths from the area..

### 31.2.3 Preliminary (P) Notices to Mariners

1. In maritime areas Preliminary Notices to Mariners, (P)NMs, for paper chart are defined in S-4, Section B-600. A (P)NM promulgates navigationally significant information early to the Mariner, for example when a paper chart new edition cannot be issued in due time.

For the paper chart, the convention is for the Mariner to insert the Update on the chart in pencil, and erase it when the (P)NM is cancelled.

S-401 provides mechanisms which allow IENCs to be automatically updated (Update application profile). This allows the affected IENC(s) to be continually updated in a timely manner for the duration of the NM without additional workload for the boatmaster.

Producers must promulgate preliminary information which is safety-related or which otherwise needs to be advised to the boatmaster urgently by IENC Update to provide the Inland ECDIS or ECS user with an updated System Database. This method of delivery corresponds to the service that (P)NMs offer to the paper chart user.

2. Update encoding for IENC and (P)NM for paper chart are two completely different communication processes for promulgating information to the boatmaster.

For example, there are instances when the paper chart needs updating using a NM block (also known as a chartlet or patch) or by issuing a New Edition due to the complexity or volume of changes. This could clutter the paper chart unacceptably if amended by hand and/or overburden the chart corrector. The lead time for a NM block correction or a New Edition can be lengthy, sometimes several months. In these cases a (P)NM may be issued as an interim measure. The ENC Updating mechanisms are more flexible and may allow for ENC Updates to be issued in quicker time. However, experience has shown that large Updates may result in processing issues in the ECDIS, in particular inordinately long loading times. Therefore producing an ENC New Edition may be the better option in some cases.

There may be other instances, when new information is received, where it is not possible to fully update both the ENC and paper chart promptly. For example, not all the information required to produce a chart-updating NM is received by the HO in the first notification (for instance notification of works in progress or projected), or extensive new information requires significant compilation work. In these cases it is still necessary to provide notification of navigationally significant changes to the Mariner in a timely manner.

Since the paper chart and ENC processes are different (but not supposed to be independent), and also the products to which they apply are different, it is recommended that ENC Updates be derived from the source information rather than from the paper chart (P)NM. It is often the case that the paper chart (P)NM does not provide enough detail to encode the ENC Update exactly as it should be.

3. Simple or more complex encoding methods are possible but it is important for Producers to consider carefully which encoding method is appropriate when creating an IENC Update with due consideration for time.
4. Often, information received is too complex, extensive and/or imprecise to be encoded with the relevant S-401 features. In these instances the use of a **Caution Area** feature (see clause 16.11) is

preferred to give a précis of the overall changes together with detailed navigationally significant information. For complex or extensive changes the **Caution Area** should have the complex attribute **information**, sub-attribute **file reference** referencing a file containing precise details of the preliminary information. See also clause 31.2.2 paragraph 7 above. If the information is less precise then **information** should be used to inform boatmasters of this fact.

It is noted that the boatmaster, if it is considered necessary, has the facility in the Inland ECDIS or ECS to add “Mariner Objects” and annotate them. These can be saved in the System Database based on information provided in textual form using the **information** complex attribute. It is envisaged that these features would be created at the “Route Planning” stage and act as a prompt during the “Route Monitoring” phase.

When information is issued as advance notification for an IENC it is necessary to provide as soon as possible to the boatmaster the final and full charted information encoded with the relevant S-401 features. An IENC Update or a New Edition of the IENC dataset should therefore be issued at a later date when the producer can carry out full encoding of the changes. The period of time will depend on the following:

- the time needed by the producer to undertake the full encoding with relevant features;
  - the time needed to obtain confirmation of details; and
  - the date at which the real world situation is stabilized and any forecast changes have been completed.
5. Source Information received may contain some navigationally significant elements that are simple to encode with the relevant features in a timely manner. In such cases these elements may be encoded with the relevant features provided that they reflect the “real world” situation after the IENC Update is made available to the user. However, if the changes are subject to continual change these features should be amended as a consequence and will represent additional work for the producer. In such cases, the IENC Update should also warn the boatmaster that the situation is subject to change. For temporary information, see clause 31.2.2.
  6. Use of complex attribute **fixed date range**: See clause 31.2.2 paragraph 6. For new or amended routing measures, see clause 31.1.1.
  7. Use the complex attribute **information**: See clause 31.2.2 paragraph 7.
  8. Diagrams are sometimes very useful to the boatmaster, for example, for indicating changes to complex routing measures or the introduction of new ones. A picture file may be referenced using the attribute **pictorial representation** in such cases.
  9. IENC Updates issued for preliminary information should be managed and reviewed regularly. For example further source information may have been acquired requiring a further IENC Update. This may add, modify or cancel information previously promulgated.
  10. Further verification is recommended to make sure that the encoded IENC Update is consistent with the corresponding paper notice.
  11. Guidelines for typical cases:
    - a) Traffic separation schemes:
      - See clause 31.1.1. For the use of the complex attribute **fixed date range**, see also clause 31.2.2 paragraph 6.
    - b) Complex information within an area of change (for example works in progress):
      - A **Caution Area** feature (see clause 16.11) should be created to cover the area. Information is provided using the complex attribute **information** (see clause 2.4.6), sub-attribute **text**, for example *under construction*, or sub-attribute **file reference** to encode a reference to an IENC support file when it is necessary to give more detailed information. If sufficiently detailed information is available, then navigationally significant information such as navigational aids, fairways, regulated areas, etc. can be encoded or modified within the **Caution Area** if time permits. A reference to a picture file may also be included, if required, using the attribute **pictorial representation** on the **Caution Area**.
      - Alternatively, and if considered appropriate a **Restricted Area** feature (see clause 17.8), with attribute **restriction** = 7 (entry prohibited) may be encoded instead of the **Caution Area** feature.
    - c) Simple information which does not need an additional notification of caution:

- The relevant feature(s) and the appropriate attributes should be encoded with any additional contextual information provided using the complex attribute **information** (see clause 2.4.6). In this case it is not necessary to use a **Caution Area** feature. This could apply, for example, to submarine cables or pipelines being laid (**Cable Submarine** or **Pipeline Submarine/On Land** features), or an area under reclamation (**Land Area** feature with attribute **condition** = 3 (under reclamation)). If required the encoding should reflect that positions are approximate using the spatial attribute **quality of horizontal measurement** = 4 (approximate) on the spatial type(s).

d) Depths less than those charted within a defined area:

- If the depth values and their positions are known, **Sounding** features (see clause 11.3) may be created or modified. Any affected depth contours and depth areas should also be amended as necessary. The source of the information should be encoded using the complex attribute **information** (see clause 2.4.6). However, Producing Authorities should carefully consider the time needed to update ENC depth information and the complexity of changes to the topology that may be required.
- The encoding of amended **Sounding**, **Depth Area** and associated features could be inappropriate for promulgating this navigationally significant information within acceptable time scales. In this case a **Caution Area** (see clause 16.11) is the preferred option. In such cases, only the most significant amendments to depth information should be provided using the complex attribute **information**. This method should also be used if the depth values and/or the exact positions are unknown, or if the producer only has information relating to a limited number of depth values.

## Annex AA - Notice Marks (main European inland waterway system)

| category of notice mark | Meaning                                                                                                            | Code  | Picture                                                                             | Area of Impact                                                                  | Features / (Attributes)                                                                    |
|-------------------------|--------------------------------------------------------------------------------------------------------------------|-------|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 1                       | no entry (general sign)                                                                                            | A.1   |    | no area, when at a bridge, otherwise bank to bank                               | <b>Restricted Area</b><br>(restriction = 7)                                                |
| 2                       | sections closed to use, no entry except for non-motorized small craft                                              | A.1.1 |    |                                                                                 | <b>Restricted Area</b><br>(restriction = 8)                                                |
| 3                       | no overtaking                                                                                                      | A.2   |    | bank to bank                                                                    | <b>Restricted Area</b><br>(restriction = 28)                                               |
| 4                       | no overtaking of convoys by convoys                                                                                | A.3   |    | bank to bank                                                                    | <b>Restricted Area</b><br>(restriction = 29)                                               |
| 5                       | no passing or overtaking                                                                                           | A.4   |    | bank to bank                                                                    | <b>Restricted Area</b><br>(restriction = 30)                                               |
